An expert on China's global infrastructure expansion provides an urgent look at the battle to connect and control tomorrow's networks. From the ocean floor to outer space, China's Digital Silk Road aims to wire the world and rewrite the global order. Taking readers on a journey inside China's surveillance state, rural America, and Africa's megacities, Jonathan Hillman reveals what China's expanding digital footprint looks like on the ground and explores the economic and strategic consequences of a future in which all routers lead to Beijing. If China becomes the world's chief network operator, it could reap a commercial and strategic windfall, including many advantages currently enjoyed by the

United States. It could reshape global flows of data, finance, and communications to reflect its interests. It could possess an unrivaled understanding of market movements, the deliberations of foreign competitors, and the lives of countless individuals enmeshed in its networks. However, China's digital dominance is not yet assured. Beijing remains vulnerable in several key dimensions, the United States and its allies have an opportunity to offer better alternatives, and the rest of the world has a voice. But winning the battle for tomorrow's networks will require the United States to innovate and take greater risks in emerging markets. Networks create large winners, and this is a contest America cannot afford to lose.

Digitalization is one of the biggest challenges of the 21st Century. In Germany, the concept of Industry 4.0 goes back to the high-tech strategy of the Federal Government and describes the interlocking of industrial production with the latest information and communication technology. In the intelligent factory, intelligent and networked machines will operate, decide and optimize largely autonomously in cooperation with humans. For China, the German concept Industry 4.0 is a strategic source of inspiration. Among other things, it was a model for the current Chinese innovation and industrial policy strategy Made in China 2025. This book is looking into different aspects of digitalization. Part 1 presents the concept of Industry 4.0, both, from the German and the Chinese perspective. Part 2 describes the Chinese innovation concept Made in China 2025 within different economic sectors in China and discusses to what extent Industry 4.0 might be considered its role model. Part 3 presents the

opportunities and challenges of digitalization and big data from a regional perspective. Part 4 analyses the special aspect of the impacts of digitalization for the banking sector and international trade cooperation. Finally, Part 5 focuses on digitalization and innovation considering small and medium-sized companies in particular.

Business as usual' isn't working. There is an emerging consensus that all is not well with today's market-centric economic model. Although it has delivered wealth over the last half-century and pulled millions out of poverty, it is recession-prone, leaves too

many people unemployed, creates ecological scarcities and environmental risks, and widens the gap between the rich and the poor. In *Corporation 2020*, Pavan Sukhdev lays out a sweeping new vision for tomorrow's corporation: one that will increase human well being and social equity, decrease environmental risks and ecological losses, and still generate profit. Sukhdev illustrates his vision with examples ranging from Infosys's creation of human capital to Citibank's having to change its project finance policy due to rainforest destruction. From its insightful look into the history of the corporation to the thoughtful discussion of the steps needed to craft a better corporate model, *Corporation 2020* offers a hopeful vision for the role of business in shaping a more equitable, sustainable future.
