resulted from a previous triple reassortment of bird, swine, and human flu viruses that further combined with a Eurasian pig flu virus, leading to the term "swine flu". 2009 swine flu pandemic - Wikipedia The map tracks the lethal flu-like infection, which has killed more than 1,300 people and infected 60,000 - mostly in China - and pits it against SARS in 2003, swine flu in 2009 and Ebola in 2014. How the killer coronavirus compares to SARS, swine flu and ... "Continued containment is particularly important as vaccine supplies are arriving on the Island and the first phase of vaccination is set to begin in around two weeks time. As vaccination is rolled out within the Island a great many cases of swine flu could be prevented all together and the severe pressures expected for the hospital ameliorated. Swine flu: containment still vital By 18 December 2009 in Australia, 37,537 swine flu tests yielded positive results and the confirmed death toll of people infected with swine flu was 191. Epidemiology. The first case of swine flu in Australia was reported on 9 May 2009 in a 33-year-old woman from Queensland when she touched down from a flight from Los Angeles to Brisbane. 2009 swine flu pandemic in Australia - Wikipedia In March and April 2009, an outbreak of a new strain of influenza commonly referred to as "swine flu" infected many people in Mexico and other parts of the world, causing illness ranging from mild to severe. Initial reports suggested that the outbreak had started in February due to farming practices at a pig farm half-owned by Smithfield Foods. Smithfield Foods stated that it had found no clinical signs or symptoms of the presence of swine influenza in the company's swine herd, or among its employees. 2009 swine flu pandemic in Mexico - Wikipedia World health officials admitted they were powerless to halt the spread of swine flu and ratcheted up their pandemic alert level as the number of affected countries rose sharply on Tuesday. "Continued containment is particularly important as vaccine supplies are arriving on the Island and the first phase of vaccination is set to begin in around two weeks time.
