"This popular series
has been fully revised
and updated to provide
full coverage of the
latest Cambridge AS
and A Level
Mathematics syllabus
(9709). The renowned
author team provide
clear and detailed

narrative explanations, combined with a variety of new material and questions, which have been added to all of the titles in the series to ensure that students continue to be engaged and have access to everything they need to master the mathematical skills required of the course. Along with full revisions of the content, this trusted and challenging series also has a refreshed appearance with each book continuing to cover one syllabus unit (except P2 and P3 which are covered in a combined volume)." -- Publisher description.

Math for the

Frightened Cambridge University Press

This series has been developed specifically for the Cambridge International AS & A Level Mathematics (9709) syllabus to be examined from 2020. Cambridge International AS & A Level Mathematics: Pure Mathematics 1 matches the corresponding unit of the syllabus, with a clear and logical progression through. It contains materials on topics such as quadratics, functions, coordinate geometry, circular measure, series, differentiation and integration. This coursebook contains a variety of features including recap sections for students to check their prior knowledge, detailed explanations and

worked examples, end-of-chapter and cross-topic review exercises and 'Explore' tasks to encourage deeper thinking around mathematical concepts. Answers to coursebook questions are at the back of the book.

Handbook of Computability and Complexity in Analysis

HarperCollins UK

Dealing with mechanics and the solving of mechanical problems with the help of pure mathematics, this A-Level text introduces at an early stage an appreciation of the properties of vectors. Throughout the book problems are solved using vector methods where appropriate, and many worked examples are provided to illustrate each main development of a topic. A set of straightforward problems follows each section, and a selection

of more challenging questions appears in the miscellaneous exercises at the end of most chapters, with multiple-choice questions on most topics.

 Computable analysis is
 the modern theory of
 computability and
 complexity in analysis
 that arose out of
 Turing's seminal work
 in the 1930s. This was
 motivated by questions
 such as: which real

numbers and real
 number functions are
 computable, and which
 mathematical tasks in
 analysis can be solved
 by algorithmic means?
 Nowadays this theory
 has many different
 facets that embrace
 topics from
 computability theory,
 algorithmic
 randomness,
 computational
 complexity, dynamical
 systems, fractals, and
 analog computers, up
 to logic, descriptive set
 theory, constructivism,
 and reverse
 mathematics. In recent
 decades computable
 analysis has invaded
 many branches of
 analysis, and
 researchers have
 studied computability
 and complexity
 questions arising from
 real and complex
 analysis, functional
 analysis, and the

theory of differential equations, up to (geometric) measure theory and topology. This handbook represents the first coherent cross-section through most active research topics on the more theoretical side of the field. It contains 11 chapters grouped into parts on computability in analysis; complexity, dynamics, and randomness; and constructivity, logic, and descriptive complexity. All chapters are written by leading experts working at the cutting edge of the respective topic. Researchers and graduate students in the areas of theoretical computer science and mathematical logic will find systematic introductions into many branches of

computable analysis, and a wealth of information and references that will help them to navigate the modern research literature in this field. *Australian National Bibliography* Cambridge University Press

Cambridge AS and A Level Mathematics is a revised series to ensure full syllabus coverage. This coursebook has been revised and updated to ensure that it meets the requirements for the Pure Mathematics 2 and 3 (P2 and P3) units of Cambridge AS and A Level Mathematics (9709).

Additional materials have been added to sections on logarithmic and exponential functions, the derivative of $\tan x$ and vectors. All of the review questions have been updated to reflect changes in the style of questions asked in the course.
