HARRISON STEWART

A Case-Based Textbook Taylor & Francis
Over the past two decades there has been a marked change in global age demographics, with the number of over-60s increasing by 82% and the number of centenarians by 715%. This new-found longevity is testament to the success of recent advances in medicine, but poses significant challenges to multiple areas of health care concerning older patients. Building upon its predecessor's reputation as the definitive resource on the subject, this new edition of the Oxford Textbook of Geriatric Medicine offers a comprehensive and multinational examination of the field. Fully revised to reflect the current state of geriatric medicine, it examines the medical and scientific basis of clinical issues, as well as the ethical, legal, and socio-economic concerns for healthcare policy and systems. Over 170 chapters are broken up into 16 key sections, covering topics ranging from policy and key concepts through to infection, cancer, palliative medicine, and healthy ageing. New material includes focus on the evolving concepts of malnutrition, sarcopenia, frailty, and related geriatric syndromes and integration of geriatric principles from public health, primary and specialized care, and transitional stages from home to emergency, medicine and surgery, rehabilitation, and long term care. The Oxford Textbook of Geriatric Medicine brings together specialists from across the globe to provide every physician involved in the care of older patients with a comprehensive resource on all the clinical problems they are

likely to encounter, as well as on related psychological, philosophical, and social issues.

The Clinical Neurology of Old Age

McGraw Hill Professional

This book provides the first comprehensive overview of a new scientific discipline termed Geroscience. Geroscience examines the molecular and cellular mechanisms that might explain why aging is the main risk factor for most chronic diseases affecting the elderly population. Over the past few decades, researchers have made impressive progress in understanding the genetics, biology and physiology of aging. This book presents vital research that can help readers to better understand how aging is a critical malleable risk factor in most chronic diseases, which, in turn, could lead to interventions that can help increase a healthy lifespan, or 'healthspan.' The book begins with an analysis of the Geroscience hypothesis, as well as the epidemiological underpinnings that define aging as a candidate main risk factor for most chronic diseases. Next, each chapter focuses on one particular disease, or group of diseases, with an emphasis on how basic molecular and cellular biology might explain why aging is a major risk factor for it. Coverage in the book includes: cancer, cardiovascular disease, dementias, stroke, Parkinson's and Alzheimer's diseases, osteoporosis, arthritis, diabetes asthma, emphysema, kidney disease, vision impairment, and AIDS/HIV. It finishes with a chapter on pain in the elderly and an overview of future steps needed to bring the newly acquired knowledge into the clinic and the public at large.

Geriatric Trauma and Acute Care
Surgery OUP Oxford

Praise for this book: An excellent textbook accompanied by high quality illustrations illustrating clinical applications, [and the] advantages and limitations of ultrasound examinations of the central nervous system. --RAD Magazine

Neurosonology and Neuroimaging of Stroke is a comprehensive reference for the diagnosis and management of cerebrovascular disease using neurosonology. Divided into two main parts, the book opens with an in-depth overview of the fundamental principles of neurosonology. It describes ultrasound anatomy, examination techniques, the essential technical concepts for clinical applications, as well as the pathogenesis of stroke and vascular pathology. The second part of the book presents 30 cases of various levels of difficulty. For each case, the book provides concise descriptions of clinical presentation, initial neuroradiological findings, suspected diagnosis, the angiological questions, and final diagnosis. Each case concludes with a detailed discussion, enabling the clinician to gain a solid understanding of the diagnosed disease and the angiologic questions arising from the case. Features: Practical discussion of 30 clinical scenarios thoroughly prepares the clinician for the range of frequently encountered problems. Consistent presentation aids rapid reference to cases of interest. More than 750 high-quality illustrations, including full-color Doppler images. Nearly 100 video clips on the accompanying MediaCenter web page demonstrate anatomy, imaging concepts, and select cases included in the book. A reference and casebook in a single volume, Neurosonology and Neuroimaging of Stroke is ideal for clinicians seeking to optimize care for

patients by enhancing their knowledge of this important diagnostic tool.

Oxford Textbook of Geriatric Medicine Elsevier

The leading reference in the field of geriatric care, Brocklehurst's Textbook of Geriatric Medicine and Gerontology, 8th Edition, provides a contemporary, global perspective on topics of importance to today's gerontologists, internal medicine physicians, and family doctors. An increased focus on frailty, along with coverage of key issues in gerontology, disease-specific geriatrics, and complex syndromes specific to the elderly, makes this 8th Edition the reference you'll turn to in order to meet the unique challenges posed by this growing patient population. Consistent discussions of clinical manifestations, diagnosis, prevention, treatment, and more make reference quick and easy. More than 250 figures, including algorithms, photographs, and tables, complement the text and help you find what you need on a given condition. Clinical relevance of the latest scientific findings helps you easily apply the material to everyday practice. A new chapter on frailty, plus an emphasis on frailty throughout the book, addresses the complex medical and social issues that affect care, and the specific knowledge and skills essential for meeting your patients' complex needs. New content brings you up to date with information on gerontechnology, emergency and pre-hospital care, HIV and aging, intensive treatment of older adults, telemedicine, the built environment, and transcultural geriatrics. New editor Professor John Young brings a fresh perspective and unique expertise to this edition.

Practical Guide Springer

Important Notice: The digital edition of this book is missing some of the images

or content found in the physical edition. *Gerontological Nursing: Competencies for Care, Second Edition* is a comprehensive and student-accessible text that offers a holistic and interdisciplinary approach to caring for the elderly. The framework for the text is built around the Core Competencies set forth by the American Association of Colleges of Nursing (AACN) and the John A. Hartford Foundation Institute for Geriatric Nursing. Building upon their knowledge in prior medical surgical courses, this text gives students the skills and theory needed to provide outstanding care for the growing elderly population. It is the first of its kind to have more than 40 contributing authors from many different disciplines. Some of the key features include chapter outlines, learning objectives, discussion questions, personal reflection boxes, and case studies.

Perspectives and Narratives from India Springer

Popular with generations of practitioners, Brocklehurst's *Textbook of Geriatric Medicine and Gerontology* has been the definitive reference of choice in the field of geriatric care. The new 7th Edition, by Howard M. Fillit, MD, Kenneth Rockwood, MD, and Kenneth Woodhouse, carries on this tradition with an increased clinical focus and updated coverage to help you meet the unique challenges posed by this growing patient population. Consistent discussions of clinical manifestations, diagnosis, prevention, treatment, and more make reference quick and easy, while over 255 illustrations compliment the text to help you find what you need on a given condition. Examples of the latest imaging studies depict the effects of aging on the brain, and new algorithms further streamline decision making.

Expert Consult functionality—new to this edition—further enhances your reference power with convenient online access to the complete text and illustrations from the book. Emphasizes the clinical relevance of the latest scientific findings to help you easily apply the material to everyday practice. Features consistent discussions of clinical manifestations, diagnosis, prevention, treatment, and more that make reference quick and easy. Includes over 255 illustrations—including algorithms, photographs, and tables—that compliment the text to help you find what you need on a given condition. Provides summary boxes at the end of each chapter that highlight important points. Features the work of an expert author team, now led by Dr. Howard M. Fillit who provides an American perspective to complement the book's traditional wealth of British expertise. Includes an expanded use of algorithms to streamline decision making. Presents more color images in the section on aging skin, offering a real-life perspective of conditions for enhanced diagnostic accuracy. Includes examples of the latest imaging studies to help you detect and classify changes to the brain during aging. Offers Grade A evidence-based references keyed to the relevant text. Provides access to the complete text, fully searchable, along with all of the illustrations downloadable for your personal presentations, at expertconsult.com.

Medical Ethics and the Elderly Springer

The 60th anniversary edition of the most popular, relied-upon guide to internal medicine *For 60 years, CURRENT Medical Diagnosis and Treatment*—the flagship volume of the renowned Lange medical series—has been delivering the authoritative information students, residents, and clinicians need to build

their medical knowledge, expertise, and confidence. Covering the latest clinical developments in all facets of medicine and fully focused on bedside clinical issues, this new edition provides completely the latest guidelines, reference, drug prices, approved drugs, and evidence-based coverage of more than 1,000 diseases and disorders—all formatted to enable you to find the answers you need quickly and effortlessly. This landmark guide covers inpatient and outpatient care, focusing on the diagnostic tools relevant to daily practice, and reviews all primary care topics, including gynecology/obstetrics, dermatology, ophthalmology, geriatrics, preventive medicine, psychiatry, and neurology. Now includes a “year in review” feature highlighting what’s new in CMTD! Includes essentials of diagnosis for most diseases/disorders Hundreds of quick-access drug treatment tables with indexed trade names Diagnostic and treatment algorithms present important information in an at-a-glance style Up-to-date references provide peer-reviewed, evidence-based information Seven bonus chapters available online to all book purchasers, featuring expanded content and annual review of advances in HIV treatment and critical information on emerging viral infections

A Case-based Approach Elsevier Health Sciences

This book serves as a comprehensive reference for the basic principles of caring for older adults, directly corresponding to the key competencies for medical student and residents. These competencies are covered in 10 sections, each with chapters that target the skills and knowledge necessary for achieving competency. Each of the 45 chapters follow a consistent format for ease of use, beginning with an

introduction to the associated competency and concluding with the most salient points for mastery.

Chapters also includes brief cases to provide context to the clinical reasoning behind the competency, strengthening the core understanding necessary to physicians of the future. Written by expert educators and clinicians in geriatric medicine, *Geriatric Practice* is key resource for students in geriatric medicine, family and internal medicine, specialties, hospice and nursing home training, and all clinicians studying to work with aging patients.

Oxford Handbook of Geriatric Medicine Elsevier Health Sciences

Geriatric Rehabilitation addresses the fact that this is an age in which individuals have increasing longevity, better health care, education and expectations of health care which present new, increasing and even radical challenges to health care providers. The care of our older patients in rehabilitation settings demands the broad understanding of the key differences in strategies to care for older adults. The combined skills embraced in rehabilitation and geriatrics are presenting unprecedented opportunities for both fields to make substantive and even ground-breaking improvements in the lives of millions of older adults who entrust their lives to us. Rarely in one’s medical career are such opportunities so evident and achievable. *Geriatric Rehabilitation* edited by Dr. K. Rao Poduri, MD. FAAPMR draws on a distinguished group of authors who are the front-line providers of care to the older adults. This book presents the full spectrum of the unique care needs of older patients who need the combined skills of physical medicine and geriatrics. It provides an easily accessible means of

acquiring and improving these new skills for all those involved in geriatric care.

An Introduction to Gerontology Saunders

The leading introductory textbook on geriatrics – completely updated and revised *Essentials of Clinical Geriatrics* is an engagingly written, up-to-date introductory guide to the core topics in geriatric medicine. Since 1984, its goal has remained unchanged: to help clinicians do a better job of caring for their older patients. You will find thorough and authoritative coverage of all the important issues in geriatrics, along with concise, practical guidance on the diagnosis and treatment of the diseases and disorders most commonly encountered in an elderly patient. Presented in full-color, this classic features a strong focus on the field's must-know concepts, from the nature of clinical aging to differential diagnosis of important geriatric syndromes to drug therapy and health services. The Eighth Edition has been completely revised to provide the most current updates on the assessment and management of geriatric care. **FEATURES:** • Numerous tables and figures that summarize conditions, values, mechanisms, therapeutics, and more • Thorough coverage of preventive services and disease screening • Eight chapters devoted to general management strategies • Important chapters on ethical issues and palliative care • Appendix of Internet resources on geriatrics *Essentials of Clinical Geriatrics*, Eighth Edition is the best resource available to help healthcare professionals provide the innovative, cost-effective, and person-centered care that older people and their caregivers deserve.

Gerontological Nursing: Competencies for Care Wiley-Blackwell

In an ageing population, geriatric medicine has become central to general practice, and to emergency and general internal medicine in the hospital setting. Diseases are more common in the older person, and can be particularly difficult to assess and to treat effectively in a field that has limited evidence, yet makes up a substantial proportion of the work of most clinicians. Fully updated, this second edition of the Oxford Handbook of Geriatric Medicine includes all the information required to deliver effective geriatric care. Guidance is given on a range of key treatment areas, indicating where practice differs from that of younger adults or is ill informed by evidence, where dangers lurk for the inexperienced clinician, and on the many ethical and clinical dilemmas common in geriatric practice. This accessible handbook is essential reading for all junior doctors and specialist trainees in geriatric medicine and general internal medicine, and for all medical and nursing staff who manage older people.

Current Diagnosis and Treatment:

Geriatrics, 3/e Jones & Bartlett

Publishers

This comprehensive volume provides a practical framework for evaluation, management and disposition of this growing vulnerable patient population.

Geriatrics at Your Fingertips Springer

Science & Business Media

This textbook presents real-world cases and discussions that introduce the various mental health syndromes found in the aging population before delving into the core concepts covered by geriatric psychiatry curricula. The text follows each case study with the vital information necessary for physicians in training, including key features of each disorder and its presentation, practical guidelines for diagnosis and treatment,

clinical pearls, and other devices that are essential to students of geriatric psychiatry. With the latest DSM-5 guidelines and with rich learning tools that include key points, review questions, tables, and illustrations, this text is the only resource that is specifically designed to train both American and Canadian candidates for specialty and subspecialty certification or recertification in geriatric psychiatry. It will also appeal to audiences worldwide as a state-of-the-art resource for credentialing and/or practice guidance. The text meets the needs of the future head on with its straightforward coverage of the most frequently encountered challenges, including neuropsychiatric syndromes, psychopharmacology, eldercare and the law, substance misuse, mental health following a physical condition, medical psychiatry, and palliative care. Written by experts in the field, *Geriatric Psychiatry: A Case-Based Textbook* is the ultimate resource for graduate and undergraduate medical students and certificate candidates providing mental health care for aging adults, including psychiatrists, psychologists, geriatricians, primary care and family practice doctors, neurologists, social workers, nurses, and others.

A Short Textbook of Psychiatry Springer

The definitive guide to safe, effective care of older adults—updated with important new content and streamlined for quick access. Covers the complete range of topics in geriatric care, including theory and fundamentals, assessment, conditions, diseases, symptoms, policies, and societal issues that affect older patients. Provides a framework for using the functional and cognitive status, prognosis, and social context of patients to guide diagnosis

and treatment of medical conditions. Delivers essential information on important topics such as delirium, cognitive impairment, dementia, falls and mobility disorders, Parkinson disease and other movement disorders, sleep disorders, and arthritis. Includes guidance on care in all settings – clinic, home, hospital, and long-term care, as well as pre- and post-operative settings. New content on technology to enhance geriatric care, caregiving support, the unique needs of older immigrants, Medicare and Medicaid, legal issues and conservatorship, aid in dying, assisted living care, short-stay rehabilitation, prostate cancer, marijuana use, syncope, and driving safety.

Essentials of Clinical Geriatrics, Eighth Edition Springer

Long-term care services include a broad range of services that meet the needs of frail older people and other adults with functional limitations. Long-Term care services provided by paid, regulated providers are a significant component of personal health care spending in the United States. This report presents descriptive results from the first wave of the National Study of Long-Term Care Providers (NSLTCP), which was conducted by the Centers for Disease Control and Prevention's National Center for Health Statistics (NCHS). This report provides information on the supply, organizational characteristics, staffing, and services offered by providers of long-term care services; and the demographic, health, and functional composition of users of these services. Service users include residents of nursing homes and residential care communities, patients of home health agencies and hospices, and participants of adult day services centers.

CURRENT Medical Diagnosis and

Treatment 2021 Cambridge University Press

Dealing comprehensively with the neurological disorders of the aged, *The Clinical Neurology of Old Age* provides a practical guide to the analysis and management of these disorders. Forty specialists provide a broad range of coverage, discussing the influence of age on the pattern of disease and presenting an up-to-date account of changing knowledge of both well-known and relatively unexplored areas of geriatric neurology.

Geriatric Anesthesiology Government Printing Office

In their later years, Americans of different racial and ethnic backgrounds are not in equally good--or equally poor--health. There is wide variation, but on average older Whites are healthier than older Blacks and tend to outlive them. But Whites tend to be in poorer health than Hispanics and Asian Americans. This volume documents the differentials and considers possible explanations. Selection processes play a role: selective migration, for instance, or selective survival to advanced ages. Health differentials originate early in life, possibly even before birth, and are affected by events and experiences throughout the life course. Differences in socioeconomic status, risk behavior, social relations, and health care all play a role. Separate chapters consider the contribution of such factors and the biopsychosocial mechanisms that link them to health. This volume provides the empirical evidence for the research agenda provided in the separate report of the Panel on Race, Ethnicity, and Health in Later Life.

Springer Nature

This concise, introductory handbook discusses the basic principles of medical

ethics, and includes practical, realistic guidance on how to evaluate and manage common ethical problems, focusing on the care of elderly patients. Typical scenarios faced in clinical practice, such as issues of mental capacity and consent, resuscitation, near death decisions, quality of life, and health care expenditure, are discussed. *Geriatric Psychiatry* Lippincott Williams & Wilkins

Geriatric Trauma and Critical Care provides a multidisciplinary overview of the assessment and management of the elderly patient presenting with surgical pathology. By utilizing current literature and evidence-based resources, the textbook elucidates the unique nature of caring for the elderly population. The structure of the volume provides the reader with an overview of the physiologic and psychological changes, as well as the impact on the healthcare system, associated with the aging process. Emphasis is placed on the impact of aging, pre-existing medical problems, effects of polypharmacy, advanced directives and end-of-life wishes on acute surgical problems, including trauma and surgical critical care. Special attention is given to the ethical implications of management of the aged. The multidisciplinary contributors provide a unique point of view not common to surgical texts. The textbook is the definitive resource for practicing surgeons, emergency medicine physicians, intensivists, anesthesiologists, hospitalists, geriatricians, as well as surgical residents, nurses and therapists, all who care for elderly patients with surgical emergencies.

Critical Perspectives on Racial and Ethnic Differences in Health in Late Life Thieme
Geriatric anesthesia is a rapidly growing

and evolving field and this is the major revision of a classic anesthesia reference. The last few years have seen significant advancements and important new modalities for addressing the needs of an aging population. The editors of this second edition are uniquely situated

to put together a text highlighting both essential knowledge and recent breakthroughs of importance to all who work with the elderly. This edition easily maintains the high standard for quality scholarship and useful material set by the first.
