Topological Data Analysis (TDA) refers to statistical methods that nd struc- ture in data. As the name suggests, these methods make use of topological ideas. Often, the term TDA is used narrowly to describe a particular method called persistent homology (discussed in Section 4). Topological Data Analysis - arXiv Modern data science uses so-called topological methods to find the structural features of data sets before further supervised or unsupervised analysis. Geometry and topology are very natural tools for analysing massive amounts of data since geometry can be regarded as the study of distance functions.
