addition to undergraduate heat transfer, students taking this course are expected to be familiar with vector algebra, linear algebra, ordinary differential equations, particle and rigid-body dynamics, thermodynamics, and integral and differential analysis in fluid mechanics. ANALYTICAL HEAT TRANSFER variation of the heat transfer coefficient over the surface, or the radiation heat transfer on the surfaces can make it impossible to obtain an analytical solution. Therefore, analytical solutions are limited to problems that are simple or can be simplified with reasonable approximations. 2 Better Modeling We mentioned earlier that analytical solutions are exact solutions since they do not involve any approximations. When a thermal perturbation is applied at some point in a medium (say, for example, an instantaneous change in a surface temperature), it generally takes on the order of $t = r^2/\alpha$ for the perturbation to appear at a distance r from the point. In this chapter, we will study some practical nonlinear heat transfer problems, in which radiation is of importance and acts concurrently with other heat transfer mechanisms. Differential equations, governing the physics of the problems will be introduced and finally solved via analytical approaches.
