The Unofficial Guide to Prescribing lays out the practical steps of

how to assess, investigate and manage a patient, with a focus on what to prescribe and how to prescribe it. Its aim is to empower newly graduated junior doctors to excel at dealing with emergencies and handling complex prescribing scenarios. Each scenario is presented as you would see it in the hospital setting and covers: - Initial step-by-step assessment of the patient: how to assess, assessment findings, and immediate management - Initial investigations - Initial management - Reassessment - Treatment - Handing over the patient - 'Prescribe' alerts throughout - Written-up drug charts - Blank drug charts for copying and practice

Now in its fourth edition, this best-selling book is fully updated to address the ever increasing demands on healthcare professionals to deliver high-quality patient care. A multitude of factors impinge on healthcare delivery today, including an ageing population, more sophisticated medicines, high patient expectation and changing health service infrastructure. Time demands on primary care doctors have caused other models of service delivery to be adopted across the world, leading to ongoing changes in the traditional boundaries of care between doctors, nurses, and pharmacists. Certain medical tasks are now being performed by nurses and pharmacists, for example prescribing. Healthcare policies to encourage patients to manage their own health have led to more medicines becoming available over the counter, allowing community pharmacists to manage and treat a wide range of conditions. Further deregulation of medicines to treat acute illness from different therapeutic areas seems likely. Government policy now encourages chronic disease management as a self-care activity, and could well be the largest area for future growth of reclassification of medicines. Pharmacists, now more than ever before, need to be able to recognise the signs and symptoms, and use an evidence-based approach to treatment.

Community Pharmacy is intended for all non-medical prescribers but especially for pharmacists, from undergraduate students to experienced practitioners. Key features - Guidance for arriving at a differential diagnosis - Practical prescribing tips - Trigger points for referral boxes - Other hints and tips boxes - Specific questions to ask boxes - Case studies - Self-assessment questions  
Consistent approach gives: - Anatomy overview - History taking and physical examination - Prevalence and epidemiology - Aetiology - Arriving at a differential diagnosis - Clinical features - Conditions to eliminate Likely causes Unlikely causes Very unlikely causes - Evidence base for OTC medicine - Practical prescribing and product selection - More on the examination of eyes, ears and mouth - New sections on future-proofing (vaccinations etc.) - New material covering inter-professional education for clinical skills.
