The Cleveland Clinic Cardiology Board Review Jones & Bartlett Learning

The old saying goes, "To the man with a hammer, everything looks like a nail." But anyone who has done any kind of project knows a hammer often isn't enough. The more tools you have at your disposal, the more likely you'll use the right tool for the job - and get it done right. The same is true when it comes to your thinking. The quality of your outcomes depends on the mental models in your head. And most people are going through life with little more than a hammer. Until now. The Great Mental Models: General Thinking Concepts is the first book in The Great Mental Models series designed to upgrade your thinking with the best, most useful and powerful tools so you always have the right one on hand. This volume details nine of the most versatile, all-purpose mental models you can use right away to improve your decision making, productivity, and how clearly you see the world. You will discover what forces govern the universe and how to focus your efforts so you can harness them to your advantage, rather than fight with them or worse yet- ignore them. Upgrade your mental toolbox and get the first volume today. AUTHOR BIOGRAPHY Farnam Street (FS) is one of the world's fastest growing websites, dedicated to helping our readers master the best of what other people have already figured out. We curate, examine and explore the timeless ideas and mental models that history's brightest minds have used to live lives of purpose. Our readers include students, teachers, CEOs, coaches, athletes, artists, leaders, followers, politicians and more. They're not defined by gender, age, income, or politics but rather by a shared passion for avoiding problems, making better decisions, and lifelong learning. The Great Mental Models: General Thinking Concepts Lippincott Williams & Wilkins This book, in MCQ format, is a comprehensive tool that will help Nuclear Medicine and Radiology residents and attending physicians to understand concepts in nuclear medicine. Questions cover clinical applications of nuclear medicine techniques to the cardiovascular, pulmonary, endocrine, skeletal, gastrointestinal, genitourinary, and central nervous systems. In addition, topics in physics, radiopharmacy, and radiation safety are addressed. The MCQ format closely resembles that used in board examinations in nuclear medicine. Each question has four possible answers, only one of which is correct. About 60% of the questions are linked to clinical cases, with each case having four questions on average, along with one or two images. The remainder of the questions are free-standing, with or without an image. Answers are concise but are supported by references to the literature when necessary. Pearls in boxes are used to highlight the most important pieces of information. While the questions are scrambled, as in board exams, an index categorizes each question into one of the systems or topics.
