Inhaltsangabe:Abstract:
The implementation of an
Enterprise Resource
Planning (ERP) system
refers to Information
Systems, Business
Processes, and People.

Basically, it is a changing
procedure in
organizations that strive
for company-wide high
performance. Business
Process Transformation is
about changing a
company's focus - from
products to customers.
Information Systems are
replaced by a
homogenous system
environment which
integrates all information

into a common system. The behaviour and skills of the company-wide personnel are adapted to perform in the new "world". The big challenge of the implementation is to have the properly-trained people for a high-performance organization. Unfortunately, most companies do not recognize that need. They underestimate the impact that the human factor has on an ERP approach; they consider the implementation as a software-installation with influence to the business. But, the implementation is much more complex. This thesis is dedicated to all those persons who intend to implement an Enterprise Resource Planning system, and who want to understand the theory of Business Process Transformation and how it is linked to Enterprise Resource Planning. To emphasize the importance of the human factors within the implementation, chapter 4 elaborates on End-User Training as a significant part of an implementation for a company dedicated to becoming a high-performance organization. This paper also includes a case study of an ERP implementation at Mitel Corporation. The case

study presents information about the Company, its ERP implementation, and its approach to End-User Training.

SAP Extended Warehouse Management

The goal of every warehouse manager is to have an efficiently-run operation that provides clear visibility into warehouse activities, as well as the ability to quickly optimize stock, reduce inventory movements, and streamline the supply chain process. To achieve these goals you also need the right tools, and with extended warehouse functionalities in SAP ERP, you do. Throughout this book, you'll learn everything about core functionalities and how to use them in your company. Written in a practical and straightforward style, this is the one resource you need to really understand extended warehouse management with SAP ERP and how to customize it to meet your own business requirements. First, you'll develop a solid understanding of what SAP ERP EWM is and how it can provide a competitive advantage for

your business. To this end, the author gives you an in-depth look at the various tools used for EWM, including Yard Management, Task and Resource Management, Cross Docking, and more. Then, learn the basic SAP ERP configuration steps, and find the concepts and techniques necessary for getting SAP ERP EWM to work for your needs. By making use of the insider tips provided throughout, you will be able to quickly assess and tackle your own customization issues without wasted trial and error. Plus, volumes of helpful additional resources are provided such as a full glossary to quickly find definitions of key terminology and a highly detailed index to help you easily search for key topics.
