"Having been born a freeman, and for more than thirty years enjoyed the blessings of liberty in a free State—and having at the end of that time been kidnapped and sold into Slavery, where I remained, until happily rescued in the month of January, 1853, after a bondage of twelve years—it has been suggested that an account of my life and fortunes would not be uninteresting to the public." -an excerpt

U. S. Grand Strategy and Resolute Restraint Howell Book House

An extraordinary collection of endurance and transformation by the award-winning author of Bestiary The Renunciations is a book of resilience, survival, and the journey to radically shift one's sense of self in the face of trauma. Moving between a childhood marked by love and abuse and the breaking marriage of that adult child, Donika Kelly charts memory and the body as landscapes to be traversed and tended. These poems construct life rafts and sanctuaries even in their most devastating confrontations with what a person can bear, with how families harm themselves. With the companionship of "the oracle"—an observer of memory who knows how each close call with oblivion ends—the act of remembrance becomes curative, and personal mythologies give way to a future defined less by wounds than by possibility. In this gorgeous and heartrending second collection, we find the home one builds inside oneself after reckoning with a legacy of trauma—a home whose construction starts "with a razing."

Mediterranean islands exhibit many similarities in their biotic ecological, physical and environmental characteristics. There are also many differences in terms of their human colonization and current anthropogenic pressures. This book addresses in three sections these characteristics and examines the major environmental changes that the islands experienced during the Quaternary period. The first section provides details on natural and cultural factors which have shaped island landscapes. It describes the environmental and cultural changes of the Holocene and their effects on biota, as well as on the current human pressures that are now threats to the sustainability of the island communities. The second section focuses on the landscapes of the largest islands namely Sicily, Sardinia, Corsica, Cyprus, Crete, Malta and the Balearics. Each island chapter includes a special topic reflecting a particular characteristic of the island. Part three presents strategies for action towards sustainability in Mediterranean islands and concludes with a comparison between the largest islands. Despite several published books on Mediterranean ecosystems/landscapes there is no existing book dealing with Mediterranean islands in a collective manner. Students, researchers and university lecturers in environmental science, geography, biology and ecology will find this work invaluable as a cross-disciplinary text while planners and politicians will welcome the succinct summaries as background material to planning decisions.

How to Stop Being Jealous of Your Partner's Past in 12 Steps Ten Speed Press

While much has been offered to "demystify" or "deconstruct" Christianity - The Ba'al Theory of Christianity takes this evaluation into a field that has not been truly explored - the origins of one of the cornerstones of Christianity - God sacrificed his only begotten son. This work projects this concept comes from the long forgotten or ignored impact of the Phoenician religion and their ancient valuing of human sacrifice (specifically child sacrifice.) To present the argument - this work looks at the origins of human sacrifice; the extensive expansion of its use through the highly influential religion of Phoenicia and its colonies (such as Carthage); and later - the extensive struggle over the valuing of human sacrifice as societies tended to move away from the act. As part of a new evaluation of the history this work offers the theory, that the key political events of the times were in part a struggle between those who practiced and valued human sacrifice - and those who had moved away from the overt ritual. The work looks at the religious impacts of such political events as the destruction of the ancient states of Judea and Israel; the destruction of the Phoenician empire by the Greeks and Romans; and the impact of the re-establishment of the state of Judah. At its core, the Ba'al Theory speculates that after their destruction, the Ba'alists had religion reforms somewhat similar to the well known religious reforms among the followers of Yahweh which happened during the "Babylonian exile" - where "worshippers of Yahweh" became "Jews." The difference in the reform efforts was that the Yahweh worshippers came to blame their destruction on the practice of human sacrifice; and completely rejected it. After their destruction, the followers of Ba'al, also reformed their religion - not by abandoning the value of child sacrifice but by transforming the actual child sacrifice into a "virtual act" - one great on-going human sacrifice that ended the need for any more overt acts. (or the function of the Catholic Mass) This work speculates that the repressed follower of Ba'al, in this time of political crisis, transformed or morphed their well known ancient foundation story about the god El, taking his only begotten son, and after making him a king, sacrificed him - a tale that goes back some 8,000 years. This updated version was placed in their current time with different names - but the same story. This transformation became the story of Jesus. But the work does not stop with the impact of child sacrifice on the development of Christianity - it also looks at other influences of the religion of Phoenicia- including how Greek and Roman religions morphed out of Ba'alism - with Zeus and Jupiter being a morphed version of Ba'al. And how 150 years before Constantine, Rome had an emperor who declared Ba'al the one true god, and who performed human sacrifices. The work also looks at how Ba'alims influenced so many other cultures, including the Celts. (worshipped the god Bel; burned people as part of their rituals) And how Judaism was created mainly based on complete rejection of values of Ba'alism. As a part of this process this work speculates how it is likely the original story Abraham sacrificed Isaac because it would have been standard for their time. - Only later with the anti-sacrifice movement did the story "morphed". The work goes on to look at how this valuing of human sacrifice was morphed under Christian rule - to create the Auto de Fe's of Spain and the witch burning craze in Europe. The work projects that these events were morphed versions of the ancient rites of burning people to appease a god. The Ba'al Theory covers all these points and more in an effort to bring to light a repressed history of a very important religion of ancient times - and the impact of this religion in the most unexpected places - including the very foundation of the Christian religion - that being God sacrificed his only begotten son.

Understanding Your Dog's Behavior Springer

The modern successor to Sweetness and Power, James Walvin's Sugar is a rich and engaging work on a topic that continues to change our world. How did a simple commodity, once the prized monopoly of kings and princes, become an essential ingredient in the lives of millions, before mutating yet again into the cause of a global health epidemic? Prior to 1600, sugar was a costly luxury, the domain of the rich. But with the rise of the sugar colonies in the New World over the following century, sugar became cheap, ubiquitous and an everyday necessity. Less than fifty years ago, few people suggested that sugar posed a global health problem. And yet today, sugar is regularly denounced as a dangerous addiction, on a par with tobacco. While sugar consumption remains higher than ever—in some countries as high as 100lbs per head per year—some advertisements even proudly proclaim that their product contains no sugar. How did sugar grow from prize to pariah? Acclaimed historian James Walvin looks at the history of our collective sweet tooth, beginning with the sugar grown by enslaved people who had been uprooted and shipped vast distances to undertake the grueling labor on plantations. The combination of sugar and slavery would transform the tastes of the Western world. Masterfully insightful and probing, James Walvin reveals the relationship between society and sweetness over the past two centuries—and how it explains our conflicted relationship with sugar today.

America's National Game White Wolf Pub

An informed modern plan for post-2020 American foreign policy that avoids the opposing dangers of retrenchment and overextension Russia and China are both believed to have "grand strategies"--detailed sets of national security goals backed by means, and plans, to pursue them. In the United States, policy makers have tried to articulate similar concepts but have failed to reach a widespread consensus since the Cold War ended. While the United States has been the world's prominent superpower for over a generation, much American thinking has oscillated between the extremes of isolationist agendas versus interventionist and overly assertive ones. Drawing on historical precedents and weighing issues such as Russia's resurgence, China's great rise, North Korea's nuclear machinations, and Middle East turmoil, Michael O'Hanlon presents a well-researched, ethically sound, and politically viable vision for American national security policy. He also proposes complementing the Pentagon's set of "4+1" pre-existing threats with a new "4+1" biological, nuclear, digital, climatic, and internal dangers.
