National Book Award Finalist: “This man’s ideas may be the most influential, not to say controversial, of the second half of the twentieth century.”—Columbus Dispatch At the heart of this classic, seminal book is Julian Jaynes’s still-controversial thesis that human consciousness did not begin far back in animal evolution but instead is a learned process that came about only three thousand years ago and is still developing. The implications of this revolutionary scientific paradigm extend into virtually every aspect of our psychology, our history and culture, our religion—and indeed our future. “Don’t be put off by the academic title of Julian Jaynes’s *The Origin of Consciousness in the Breakdown of the Bicameral Mind*. Its prose is always lucid and often lyrical...he unfolds his case with the utmost intellectual rigor.”—The New York Times “When Julian Jaynes . . . speculates that until late in the twentieth millennium BC men had no consciousness but were automatically obeying the voices of the gods, we are astounded but compelled to follow this remarkable thesis.”—John Updike, *The New Yorker* “He is as startling as Freud was in *The Interpretation of Dreams*, and Jaynes is equally as adept at forcing a new view of known human behavior.”—*American Journal of Psychiatry*

Research and Qualitative Interviews brings into focus the decisions that the interviewer faces by taking a data-led approach in order to open up choices and decisions in the process of planning for, managing, analysing and representing interviews. The chapters concentrate on the real-time, moment-by-moment nature of interview management and interaction. A key feature of the book is the inclusion of reflexive vignettes that foreground the voices and experience of qualitative researchers (both novices and more expert practitioners). The vignettes demonstrate the importance of reflecting on and learning from interactional experience. In addition, the book provides an overview of different types of interviews, commenting on the orientation and make-up of each type. Overall, this book encourages reflective thinking about the use of research interviews. It distinguishes between reflection, reflective practice and reflexivity. All the chapters focus on recurring choices, dilemmas and puzzles; offering advice in opening out and engaging with these aspects of the research interview.

The 1990s brought surprising industrial development in emerging economies around the globe: firms in countries not previously known for their high-technology industries moved to the forefront in new Information Technologies (IT) by using different business models and carving out unique positions in the global IT production networks. In this book, Dan Breznitz asks why economies of different countries develop in different ways, and his answer relies on the exhaustive research of the comparative experiences of Israel, Ireland, and Taiwan - states that made different choices to nurture the growth of their IT industries. The role of the state in economic development has changed, Breznitz concludes, but it has by no means disappeared. He offers a new way of thinking about state-led rapid-innovation-based industrial development that takes into account the ways production and innovation are now conducted globally. And he offers specific guidelines to help states make advantageous decisions about research and development, relationships with foreign firms and investors, and other critical issues.

Advanced jet engines may have been in development but every militarily significant air battle was fought by piston-engined fighters. Whoever designed the most powerful piston engines would win air superiority and with it the ability to dictate the course of the war as a whole. This is the never before told story of a high-tech race, hidden behind the closed doors of design offices and intelligence agencies, to create the war's best fighter engine. Using the fruits of extensive research in archives around the world together with the previously unpublished memoirs of fighter engine designers, author Calum E. Douglas tells the story of a desperate contest between the world's best engineers - the Secret Horsepower Race.
