Until now there has been no summary or overview of the wide range of work contributing to critical legal studies, the movement that has aroused such a furor in the communities of law and political philosophy. This book outlines and evaluates the principal strands of critical legal studies, and achieves much more as well. A good deal of the writing in critical legal studies has been devoted to laying bare the contradictions in liberal thought. There have been attacks and counterattacks on the liberal position and on the more conservative law and economics position. Now Mark Kelman demonstrates that any critique of law and economics is inextricably tied to a broader critique of liberalism. There are three central contradictions in liberal thought: between a commitment to mechanically applicable rules and to standards that fluctuate with situations; between intrinsic individual values and the objective knowledge of ethical truths; and between free will and determinism. Kelman shows us the pervasiveness of these contradictions in legal doctrine; their connection to broader political theory and to visions of human nature; and, finally, the degree to which mainstream thought tends to privilege certain of these commitments over others. The author also analyzes two of the most significant components of jurisprudence today the law and economics discipline and the legal process school. He concludes with a lively discussion of the role of law generally and of "cognitive legitimation," or the ways in which legal thought can make the unnecessary, the contingent, and the unjust seem natural, inevitable, and fair.

An Introduction to Legal Reasoning Houghton Mifflin

Building on earlier work in the anthropology of law and taking a critical stance toward it, June Starr and Jane F. Collier ask, "Should social anthropologists continue to isolate the 'legal' as a separate field of study?" To answer this question, they confront critics of legal anthropology who suggest that the subfield is dying and advocate a reintegration of legal anthropology into a renewed general anthropology. Chapters by anthropologists, sociologists, and law professors, using anthropological rather than legal methodologies, provide original analyses of particular legal developments. Some contributors adopt an interpretative approach, focusing on law as a system of meaning; others adopt a materialistic approach, analyzing the economic and political forces that historically shaped relations between social groups. Contributors include Said Amir Arjomand, Anton Blok, Bernard Cohn, George Collier, Carol Greenhouse, Sally Falk Moore, Laura Nader, June Nash, Lawrence Rosen, June Starr, and Joan Vincent.

To understand how the legal system works, students must consider the law in terms of its structures, processes, language, and modes of thought and argument—in short, they must become literate in the field. Legal Literacy fulfills this aim by providing a foundational understanding of key concepts such as legal personhood, jurisdiction, and precedent, and by introducing students to legal research and writing skills. Examples of cases, statutes, and other legal materials support these concepts. While Legal Literacy is an introductory text, it also challenges students to consider critically the system they are studying. Touching on significant socio-legal issues such as access to justice, legal jargon, and plain language, Zariski critiques common legal traditions and practices, and analyzes what it means "to think like a lawyer." As such, the text provides a sound basis for those who wish to pursue further studies in law or legal studies as well as those seeking a better understanding of how the legal field relates to the society that it serves.

Jossey-Bass Incorporated Pub Classic Books Library presents this brand new edition of "The Federalist Papers", a collection of separate essays and articles compiled in 1788 by Alexander Hamilton. Following the United States Declaration of Independence in 1776, the governing doctrines and policies of the States lacked cohesion. "The Federalist", as it was previously known, was constructed by American statesman Alexander Hamilton, and was intended to catalyse the ratification of the United States Constitution. Hamilton recruited fellow statesmen James Madison Jr., and John Jay to write papers for the compendium, and the three are known as some of the Founding Fathers of the United States. Alexander Hamilton (c. 1755-1804) was an American lawyer, journalist and highly influential government official. He also served as a Senior Officer in the Army between 1799-1800 and founded the Federalist Party, the system that governed the nation's finances. His contributions to the Constitution and leadership made a significant and lasting impact on the early development of the nation of the United States.

Despite notable contributions in eyewitness identification and jury selection, most legal research done by psychologists has had a minimal impact upon law and public policy in the United States. In fact, much psycholegal research is marred by systemic flaws. In this carefully-reasoned and compelling text, Bruce D. Sales and Daniel A. Krauss explain how psychologists have failed to understand the law and the context in which it operates. Even subtle misunderstandings about the nature of courtroom testimony or the application of different legal statutes across different jurisdictions, they argue, can produce research that fails to examine real world phenomena. To combat this, the authors present a roadmap for how criminal justice and forensic researchers can use research to describe, explain, predict, and provide solutions for legal situations that can have a real impact on judges, juries, and the legal profession at large. Throughout, they demonstrate a dedication to the craft of scientific research that is sure to inspire a new and improved Psychology of Law for the twenty-first century.
