A detailed guide to restoring the eight foundational areas of

health • Explains how each of legendary Taoist masters known as the Eight Immortals has a specific area of health as the focus of his or her teachings • Offers practices, techniques and guidelines for each of the Eight Immortal Healer teachings, including the important roles of oxygen and water in the body, nutrition, detoxification, exercise, energy work, emotional pollution, and spiritual hygiene The Eight Immortals are a group of legendary ancient Taoist masters, each associated with a specific area of health or a powerful healing technique. In this guide to the healing practices of the Eight Immortals, Master Mantak Chia and Johnathon Dao share the legends of each Immortal teacher and detail the many ways to apply their wisdom through nutrition, exercises, supplements, detoxification methods, spiritual practices, and energy work. They explain how the first Immortal, born during the 8th century AD, is associated with oxygen, considered in the Taoist healing perspective as the body's primary nutrient. They discuss how oxygen deficiency is the main culprit in cancer and virus and provide a number of oxygen therapies including the use of hydrogen peroxide and deep breathing to stimulate the metabolism and immune system. The second Immortal Healer centers on water, and the authors explain how chronic dehydration can lead to a host of ailments and offer advice for rehydrating. The other teachings of the Immortal Healers include Nutrition, with guidance on supplements, superfoods, toxic foods, and daily meals; Detoxification, with detailed guidelines for cleansing the body's organs and glands; Avoiding environmental

poisons, with advice on vaccines, dental amalgam fillings, sunscreen, chemotherapy, fluoride, and pesticides; Exercise, with step-by-step instructions for Inner Alchemy practices, yoga, and breathing techniques; Maintenance of the energy body, through acupuncture, chi kung healing, magnet therapy, and photon sound beams; and Emotional pollution and spiritual hygiene, with a wealth of practices for balancing the emotional body and staying connected to Source, including forgiveness, meditation, and karmic yoga. Urolithiasis is not only one of the most frequently encountered diseases at urological clinics; it is also the disorder whose treatment has shown the most rapid progress in the past decade. In that period, medicine has experienced a real revolution, characterized by minimally invasive treatments, improvement of the quality of life, and cost-effectiveness in treatment outcomes. In urology, the revolution started with the development of endoscopic retrograde treatment of urolithiasis in the upper urinary tract, which led to development of the percutaneous antegrade maneuver in the latter half of the 1970s. The most remarkable event occurred in 1982, when clinical use of extracorporeal shock wave lithotripsy was introduced by the Munich group, represented by Dr. Christian Chaussy, at the 18th Congress of the International Society of Urology in San Francisco. With the advent of these new strategies, open surgery for urolithiasis has all but disappeared. Today, with the availability

of new technology and equipment, guide lines for the treatment of urolithiasis have changed in all developed countries. It is quite timely that the Meeting of International Consultation on Urolithiasis will be held in Paris in June 2001 to establish international guidelines for urolithiasis. Looking through this textbook for urolithiasis, I was greatly impressed to learn that we have already drawn up some guidelines. The book includes all the updated advances of urolithiasis presented by the most prominent and experienced urologists from all around the world.

Experimental pharmacology is often portrayed as a creation of the nineteenth century, the age of the sciences in medicine. This book demonstrates that the basic methodology of the field, including chemical analysis, in vitro testing, animal experimentation and human research, was already developed in the course of the seventeenth and eighteenth centuries. Putting remedies on trial was stimulated by the challenge to Galenism through new chemical, mechanical and vitalist concepts of disease, by the import of exotic drugs and the flourishing trade with secret medicines. The book describes the main issues of eighteenth-century pharmacology and therapeutics and provides detailed case studies of three key areas: lithontriptics (remedies against urinary stones), opium, and Peruvian bark (quinine). It shows how pharmacological knowledge and therapeutic change were promoted in medical centres of the time, such as Edinburgh, London, Paris, Halle and Göttingen. Yet it also reveals how by publication of medical case histories many otherwise little-known practitioners contributed to this scientific enterprise as well.

Noted herbalist Matthew Wood brings twenty-five years of clinical experience to this comprehensive book on medicinal plants. The first in a two-volume set, *The Earthwise Herbal* profiles Old World plants (volume two will treat American plants). Organized alphabetically, the book encompasses all of the major—and many of the secondary—herbs of traditional and modern Western herbalism. Author Wood describes characteristic symptoms and conditions in which each plant has proved useful in the clinic, often illustrated with appropriate case histories. In addition, he takes a historical view based on his extensive study of ancient and traditional herbal literature. Written in an easy, engaging, non-technical style, *The Earthwise Herbal* offers insight into the “logic” of the plant: how it works, in what areas of the body it works, how it has been used in the past, what its pharmacological constituents indicate about its use, and how all these different factors hang together to produce a portrait of the plant as a whole entity. Ideal for beginners, serious students, or advanced practitioners, *The Earthwise Herbal* is also useful for homeopaths and flower essence practitioners as it bridges these fields in its treatment of herbal medicines.

In this major synthesis of cross-cultural research, 34 distinguished scientists study 25 common metabolic and degenerative diseases characteristic of all advanced Western nations and then examine their incidence in developing countries, among both hunter-gatherers and peasant agriculturalists. Thus the authors provide a unique opportunity to compare epidemiological data reflecting modern modes of life with data influenced by habits and diets dating back 400 generations to the advent of agriculture, and even 200,000 generations or more to the dawn of man. The results confirm the view that diseases like hypertension, lung cancer, diverticular disease, and appendicitis are maladaptations to environmental factors introduced since the Industrial Revolution. They also demonstrate that such diseases become more prevalent when Western lifestyles are adopted in primitive societies. Certain studies reveal a regression of disease incidence when exercise is increased and a diet high in starch and fiber, low in fat and salt, is resumed--characteristics of a simpler way of life. Western Diseases greatly broadens our perspective on some of the most vexing health problems in our society. It will be an essential reference for epidemiologists, nutritionists, and gastroenterologists in particular.

The nonsurgical management of gallstone disease has drawn widespread clinical interest during the last decade as ultrasound

surveys have indicated that cholelithiasis is predominantly an asymptomatic condition and much more prevalent than previously thought. This book presents an overview of the pathophysiologic and pathobiochemical principles of gallstone formation and the consequences for clinical therapeutic regimens. New information concerning the balance between vesicular and micellar transport of cholesterol, early cholesterol nucleation, and the influence of inhibiting and promoting compounds for cholesterol nucleation as well as information concerning the effects of changes in gallbladder motility and gallbladder mucosal function is reviewed. In order to make further progress in developing treatments which facilitate gallstone dissolution and in preventing disease, it is necessary to integrate this new data into our thinking. Methods of treatment such as systemic litholysis of cholesterol gallbladder stones with bile acid preparations and mechanical fragmentation of stones either by extracorporeal shock waves or intracorporeal laser systems are carefully described and separate discussions of direct contact litholysis of cholesterol stones with ether preparations and the local litholytic treatment of calcified pigment stones are included. New therapeutic applications of HMG-CoA-reductase inhibitors and nonsteroidal anti-inflammatory drugs are also critically reviewed. Finally, for the interested reader an evaluation of prophylactic treatment against stone recurrence after successful conservative treatment and an appraisal of alternative management strategies supplement the information on the conservative treatment of gallstones.
