Apheresis refers to an extracorporeal therapy which aims at removing pathological constituents from the patients' blood. Due to the development of new techniques as well as the discovery of novel autoimmune antibodies, it is increasingly recognized as an important therapeutic option for a variety of autoimmune-mediated neurological disorders, including multiple sclerosis, myasthenia gravis, autoimmune encephalitis, Guillain-Barré syndrome, and many others. Therapeutic plasma exchange (TPE) constitutes the standard method of apheresis for most indications, while immunoadsorption (IA) offers a more specific, low-risk alternative. Both methods aim at removing auto-antibodies from the blood. Evidence for most neurological diseases is still low. Interestingly, more recent developments suggest that apheresis is not limited to the removal of autoantibodies but may also be useful in neurodegenerative and possibly even in acute vascular disorders.

According to the International Association for Ambulatory Surgery (IAAS), ambulatory surgery should be defined as 'an operation/procedure, excluding an office or outpatient operation/procedure, where the patient is discharged on the same working day'. The rise of ambulatory surgery has been driven by technological advances that reduce the need for overnight hospital stays, enhanced recovery programmes that advocate early mobilisation, and the need for economic efficiency. Recent experience has shown that redistributing surgical procedures from the inpatient setting to ambulatory centres can be done without impacting quality. The majority of people requiring urologic surgery are now treated as day/outpatients thus requiring a different level of care from inpatients. Ambulatory Urology and Urogynaecology is the only book that combines urology and urogynaecology focuses on outpatient management. Packed with learning points, practical hints and tips, and boasting an international group of contributing authors, this book is co-edited by world-leading pioneers in urologic and urogynaecological surgery. Ambulatory Urology and Urogynaecology is ideal for urologists, urogynaecologists and gynaecologists, as well as specialist urology nurses and surgeons. With more and outpatient procedures being performed, this book is the perfect step-by-step guide to consult time and time again.

As medical knowledge advances we tend to compartmentalise our specialties into smaller units; but, hand in hand with this, there is a growing understanding between the different disciplines within the caring professions. Thus we are able to share our special skills to the benefit of patients. This book is an excellent example of the advantage of interdisciplinary communication and demonstrates a refreshing holistic approach to the problems of incontinence and pelvic pain. Written with physiotherapists in mind, the editors have invited contributions from many distinguished experts in their own field. These have been compiled into a comprehensive book, which will appeal to many healthcare professionals. I have had great pleasure in reading this book. During the time that I have been involved with 'pelvic dysfunction' there have been many exciting advances. These are all included in a most readable sequence, some presented with a refreshing new twist. In particular, I would like to bring to your attention the section on 'pelvic pain'. Because of our lack of understanding it has been a problem that is too often ignored and here at last are some practical ideas for therapeutic management. There is still much progress to be made in the field of incontinence and pelvic pain and as yet, no editors can be expected to produce a definitive work. However, I would like to recommend this book most strongly. It has a new approach to this topic, which is still a major problem for many people.
