ALVARADO SINGLETON

Zoo Culture HarperCollins

The amazing story of a groundbreaking scientific quest over five continents to study our modern dinosaurs—that ends up changing a life, as well as our understanding about crocodiles and their relatives. A born naturalist and a fearless traveler, Vladimir Dinets wrote travel guides, conducted field research, and lived a couple of lives before he was accepted into the PhD program in zoology at the University of Miami. He thought crocodiles were a dead-end research topic—survivors from the age of the dinosaurs but not much else—until he witnessed groups of up to seventy alligators performing mating choruses

that included infrasound vibrations—a form of communication extremely rare in nature—and a “dance” unknown in the scientific literature but that resembled a scene from Jurassic Park. To prove his thesis about the language of crocodiles, he spent the next six years traveling around the world on shoestring budgets and in extreme circumstances, studying almost every living species. At the same time, as a man desiring companionship in life, he sought love. With adventures on five continents, *Dragon Songs* is his account of this quest. It includes an escape from a boiling lava lake in the Afar Desert, being chased up a tree by a tiger in India, hitching a ride with a cocaine smuggler in Bolivia, and diving with giant Greenland sharks—all in the name of studying crocodiles, among which he routinely paddled in his inflatable kayak. Of course, not everything went according to plan. But, in the end, his ground-breaking research helped

change the field. And during the course of his adventures, he met and courted his future wife.

The Bones of Grace IUCN

An invaluable reference and exceptionally usable guide to the mammals of India. Covering the rich diversity of mammal species in India, from tigers, elephants, rhinos and whales to primates, rodents and bats, *Indian Mammals* is a comprehensive, field-ready and illustrated guide. Accompanied by superb full-colour photographs, supplementary illustrations and distribution maps, and based on impeccable scientific research reviewed by experts, *Indian Mammals* records details of virtually every mammal known to exist in India. The in-depth, up-to-date text by Vivek Menon, one of India's leading naturalists and an authority on Indian wildlife, describes key identification features, biometrics, behaviour, social strategies, habitat and distribution. Encyclopaedic in sweep yet accessible in approach, *Indian Mammals* includes the majestic and most sought after as well as the extraordinary and elusive mammals. Passionate wildlife watchers will appreciate the range of coverage and tips on identifying mammals, while naturalists will value the exacting detail needed to distinguish similar species in the field. Planned for easy reference, this compact guide is the essential resource for wildlifers of any age, from animal watchers and eco-tourists to active conservationists. ? More than 400 species of both land and water mammals with introductory pages on each order ? Over 1,000 carefully curated photographs ? Nearly 150 distribution maps ? Discover the best places to spot 300 of the world's most exciting and unusual creatures, from the soaring Andean condor and prowling Bengal tiger, to singing humpback whales and migrating wildebeest. For many people, one of the most rewarding experiences of travel is seeing creatures you wouldn't encounter back home. Whether you set out to see them on safari or spot

them by sheer luck, there's a thrill and a beauty in watching a wild animal in its natural habitat. That's why we created Lonely Planet's A-Z of Wildlife Watching. It's packed with stunning photos, details of each creature's habits and characteristics, and tips on how to increase the chances of an encounter. Inside, you'll find all the most iconic animals like lions, tigers, elephants and sharks, but we've gone even further than these headline acts to showcase the mind-blowing diversity of the natural world, with other animals including: snow leopards, mountain goats, antelopes, fennec foxes, giant albatrosses, hog-nosed bats, giant clams, corals, whales, wobbegongs, birdwing butterflies and Hercules beetles. Created in consultation with biologist and writer Amy-Jane Beer, and with a foreword by nature photographer Mark Carwardine. Important Notice: The digital edition of this book may not contain all of the images found in the physical edition.

The Walking Whales Oxford University Press, USA

This volume covers seventy-eight species with concise life history accounts revealing a surprising wealth and variety of both rodents and bats, which are able to exploit Pakistan's varied climate and topography. This field guide describes the special adaptations which have enabled some species to live and reproduce in the harshest of hot desert environments, as well as frigid alpine regions. The fluctuating cycles of population abundance, then scarcity, of some small mammals is revealed in the accounts of their reproductive biology. The grain storing habits of some rodents reveals the detrimental impact on man and his food crops. The beneficial effects both from fruit pollination and seed dispersal of valuable trees by some bats are also discussed. Nearly every species is illustrated either with

photographs, or by pen and ink drawings by the author. It is hoped that this field guide will help to create more interest and awareness of these tiny animals which live among us, yet remain largely unnoticed.

This lush book of photography represents National Geographic's Photo Ark, a major cross-platform initiative and lifelong project by photographer Joel Sartore to make portraits of the world's animals-especially those that are endangered. His powerful message, conveyed with humor, compassion, and art- to know these animals is to save them. Sartore intends to photograph every animal in captivity in the world. He is circling the globe, visiting zoos and wildlife rescue centers to create studio portraits of 12,000 species, with an emphasis on those facing extinction. He has photographed more than 6,000 already and now, thanks to a multi-year partnership with National Geographic, he may reach his goal. This book showcases his animal portraits- from tiny to mammoth, from the Florida grasshopper sparrow to the greater one-horned rhinoceros. Paired with the eloquent prose of veteran wildlife writer Douglas Chadwick, this book presents a thought-provoking argument for saving all the species of our planet.

Discover the hidden world of the fox, as beautifully revealed by an acclaimed ecologist who has studied foxes for two decades across four continents "An ode to this familiar yet mysterious creature. ... The sight of foxes can lift Brand's prose into poetry.

... By turns lyrical, salty, funny and scholarly." —New York Times Book Review
The fox. For thousands of years myth and folklore have celebrated its cunning intelligence. Today the red fox is the nature's most populous carnivore, its dancing orange tail a common sight in backyards. Yet who is this wild neighbor, truly? How do we negotiate this uneasy new chapter of an ancient relationship? Join British ecologist Adele Brand on a journey to discover the surprising secrets of the fabled fox, the familiar yet enigmatic creature that has adapted to the human world with astonishing—some say, unsettling—success. Brand has studied foxes for twenty years across four continents—from the Yucatán rainforest to India's remote Thar Desert, from subarctic Canada to metropolitan London. Her observations have convinced her that the fox is arguably the most modern of all wildlife, uniquely suited to survival in the rapidly expanding urban/wild interface. Blending cutting-edge science, cultural anthropology, and intimate personal storytelling drawn from her own remarkable fieldwork, *The Hidden World of the Fox* is Brand's rich and revelatory portrait of the extraordinary animal she has devoted her life to understanding.

Hans Thewissen, a leading researcher in the field of whale paleontology and anatomy, gives a sweeping first-person account of the discoveries that brought to light the early fossil record of whales. As evidenced in the record, whales evolved from herbivorous forest-dwelling ancestors that resembled tiny deer to carnivorous monsters stalking lakes and rivers and to serpentlike denizens of the coast. Thewissen reports on his discoveries in the wilds of India and Pakistan, weaving a narrative that reveals the day-to-day adventures of fossil collection, enriching it with local flavors from South Asian culture and society. The reader senses the excitement of the digs as well as the rigors faced by scientific researchers, for whom each new insight gives rise to even more questions, and for whom at times the logistics of just staying alive may trump all science. In his search for an understanding of how modern whales live their lives, Thewissen also journeys to Japan and Alaska to study whales and wild dolphins. He finds answers to his questions about fossils by studying the anatomy of otters and porpoises and examining whale embryos under the microscope. In the book's final chapter, Thewissen argues for approaching whale evolution with the most powerful tools we have and for combining all the fields of science in pursuit of knowledge.

"A book that offers hope." —The New York Times Book Review "A wondrous tapestry." —Carl Safina, author of *Beyond Words: What Animals Think and Feel* Audubon Medal winner Richard Louv's landmark book *Last Child in the Woods* inspired an international movement to connect children and nature. Now he redefines the future of human-animal coexistence. In *Our Wild Calling*, Louv interviews researchers, theologians, wildlife experts, indigenous healers, psychologists, and others to show how people are connecting with animals in ancient and new ways, and how this serves as an antidote to the growing epidemic of human loneliness; how dogs can teach children ethical behavior; how

animal-assisted therapy may yet transform the mental health field; and what role the human-animal relationship plays in our spiritual health. He reports on wildlife relocation and on how the growing populations of wild species in urban areas are blurring the lines between domestic and wild animals. Our Wild Calling makes the case for protecting, promoting, and creating a sustainable and shared habitat for all creatures—not out of fear, but out of love. Includes a new interview with the author, discussion questions, and a resource guide.

A Naturalist's Guide to the Mammals of Southeast Asia Bloomsbury Publishing

The report presents the latest assessment of global trends in wildlife crime. It includes discussions on illicit rosewood, ivory, rhino horn, pangolin scales, live reptiles, tigers and other big cats, and European eel. The COVID-19 (coronavirus) pandemic has highlighted that wildlife crime is a threat not only to the environment and biodiversity, but also to human health, economic development and security. Zoonotic diseases - those caused by pathogens that spread from animals to humans - represent up to 75% of all emerging infectious diseases. Trafficked wild species and the resulting products offered for human consumption, by definition, escape any hygiene or sanitary control, and therefore pose even greater risks of infection.
