This thesis presents research on novel X-ray imaging methods that improve the

study of specimens with small density differences, revealing their inner structure and density distribution.

Exploiting the phase shift of X-rays in a material can significantly increase the image contrast compared to conventional absorption imaging. This thesis provides a practical guide to X-ray

phase-contrast imaging with a strong focus on X-ray speckle-based imaging, the most recently developed phase-sensitive method. X-ray speckle-based imaging only requires a piece of abrasive paper in addition to the standard X-ray imaging setup. Its simplicity and robustness combined with the compatibility with laboratory X-ray sources, make it an ideal candidate for wide user uptake in a range of fields. An in-depth overview of the state of the art of X-ray speckle-based imaging and its latest developments is given in this thesis. It, furthermore, explores a broad range of applications, from X-ray optics characterisation, to biomedical imaging for 3D virtual histology and geological studies of volcanic rocks, demonstrating is promising potential. Moreover, the

speckle-based technique is placed in the context of other phase-sensitive X-ray imaging methods to assist in the choice of a suitable method, hence serving as a guide and reference work for future users.

A riveting thriller from the screenwriter of Twin Peaks and The X-Files. LAPD homicide detective and single mother Alex Delillo knows the risks of the job.

But when a series of explosions is detonated by a serial bomber and Alex's teenage daughter is kidnapped, she discovers the catastrophic stakes as well. The bomber's next plan: to unleash his incendiary powers on live TV. No one can stop him—because no one can find him. What he's igniting in Alex is more than a contest of wills and a race against time. It's white-hot rage. And a mother's revenge.

Jacques Perk West Academic Publishing Groundbreaking exposé of the rapid shift to robot warfare, by a leading antiwar activist. Drone Warfare is the first comprehensive analysis of one of the fastest growing—and most secretive—fronts in global conflict: the

rise of robot warfare. In 2000, the Pentagon had fewer than fifty aerial drones; ten years later, it had a fleet of nearly 7,500, and the US Air Force now trains more drone “pilots” than bomber and fighter pilots combined. Drones are already a \$5 billion business in the US alone. The human cost? Drone strikes have killed more than 200 children alone in Pakistan and Yemen. CODEPINK and Global Exchange cofounder Medea Benjamin provides the first extensive analysis of who is producing the drones, where they are being used, who controls these unmanned planes, and what are the legal and moral implications of their use. In vivid, readable style, this book also looks at what activists, lawyers, and scientists across the globe are doing to ground these weapons. Benjamin argues

that the assassinations we are carrying out from the air will come back to haunt us when others start doing the same thing—to us.

Gareth Porter presents a new interpretation of how and why the US

went to war in Vietnam. He provides a challenge to the prevailing explanation that US officials adhered blindly to a Cold War doctrine that loss of Vietnam would cause a 'domino effect' leading to communist dominance of the area.
