The need for more empathetic and community-focused students must begin with educators, as service-learning has begun to grow in popularity throughout the years. By implementing service and community aspects into the classroom at an early age, educators have a greater chance of influencing students and creating a new generation of service-minded individuals who care about their communities. Teachers must have the necessary skills and current information available to them to provide students with quality service learning and community engagement curricula. The Research Anthology on Service Learning and Community Engagement Teaching Practices provides a thorough investigation of the current trends, best practices, and challenges of teaching practices for service learning and community engagement. Using innovative research, it outlines the struggles, frameworks, and recommendations necessary for educators to engage students and provide them with a comprehensive education in service learning. Covering topics such as lesson planning, teacher education, and cultural humility, it is a crucial reference for educators, administrators, universities, lesson planners, researchers, academicians, and students.

The Encyclopedia of Curriculum Studies provides a comprehensive introduction to the academic field of curriculum studies for the scholar, student, teacher, and administrator. The study of curriculum, beginning in the early 20th century, served primarily the areas of school administration and teaching and was seen as a method to design and develop programs of study. The field subsequently expanded to draw upon disciplines from the arts, humanities, and social sciences and to examine larger educational forces and their effects upon the individual, society, and conceptions of knowledge. Curriculum studies has now emerged to embrace an expansive and contested conception of academic scholarship while focusing upon a diverse and complex dynamic among educational experiences, practices, settings, actions, and theories in relation to personal and institutional needs and interests. The Encyclopedia of Curriculum Studies serves to inform and to introduce terms, events, documents, biographies, and concepts to assist the reader in understanding aspects of this rapidly changing field of study. Representative topics include: Origins, definitions, dimensions, and variations on Curriculum Studies Curriculum development and design for schools Curricular purpose, implementation, and evaluation Contemporary issues, e.g., standards, tests, and accountability Curricular dimensions of teaching and teacher education Interdisciplinary perspectives on institutionalized curriculum Informal curricula of homes, mass media, workplaces, organizations, and relationships Impact of race, class, gender, health, belief, appearance, place, ethnicity, language Relationships of curriculum and poverty, wealth, and related factors Modes of curriculum inquiry and research Curriculum as cultural studies, exploring the formation of identities and possibilities Corporate, state, church, and military influence as curriculum Global and international perspectives on curriculum Curriculum organizations, journals, and resources Summaries of books and articles on curriculum studies Biographic vignettes of key persons in curriculum studies Relevant photographs

This volume presents the very important issue of integrating culture into the second language classroom. Some of its chapters were originally presented at two symposia on culture learning, Interdisciplinary Perspectives on Culture learning in the Second Language Curriculum, held at the University of Minnesota in 1991 and 1994. Other chapters were developed at a third conference, Culture as the Core: Transforming the Language Curriculum. The latter brought scholars and practitioners together to reflect on the earlier theoretical discussions, refine those ideas in light of subsequent theoretical developments, and translate theory into classroom practice.
