Cardiac arrest can strike a seemingly healthy individual of any age, race, ethnicity, or gender at any time in any location, often without warning. Cardiac arrest is the third leading cause of death in the United States, following cancer and heart disease. Four out of five cardiac arrests occur in the home, and more than 90 percent of individuals with cardiac arrest die before reaching the hospital. First and foremost, cardiac arrest treatment is a community issue - local resources and personnel must provide appropriate, high-quality care to save the life of a community member. Time between onset of arrest and provision of care is fundamental, and shortening this time is one of the best ways to reduce the risk of death and disability from cardiac arrest. Specific actions can be implemented now to decrease this time, and recent advances in science could lead to new discoveries in the causes of, and treatments for, cardiac arrest. However, specific barriers must first be addressed. Strategies to Improve Cardiac Arrest Survival examines the complete system of response to cardiac arrest in the United States and identifies opportunities within existing and new treatments, strategies, and research that promise to improve the survival and recovery of patients. The recommendations of Strategies to Improve Cardiac Arrest Survival provide high-priority actions to advance the field as a whole. This report will help citizens, government agencies, and private industry to improve health outcomes from sudden cardiac arrest across the United

States.

The overwhelming majority of a software system's lifespan is spent in use, not in design or implementation. So, why does conventional wisdom insist that software engineers focus primarily on the design and development of large-scale computing systems? In this collection of essays and articles, key members of Google's Site Reliability Team explain how and why their commitment to the entire lifecycle has enabled the company to successfully build, deploy, monitor, and maintain some of the largest software systems in the world. You'll learn the principles and practices that enable Google engineers to make systems more scalable, reliable, and efficient—lessons directly applicable to your organization. This book is divided into

four sections: Introduction—Learn what site reliability engineering is and why it differs from conventional IT industry practices Principles—Examine the patterns, behaviors, and areas of concern that influence the work of a site reliability engineer (SRE) Practices—Understand the theory and practice of an SRE's day-to-day work: building and operating large distributed computing systems Management—Explore Google's best practices for training, communication, and meetings that your organization can use
Comprehensive Healthcare Simulation: Nursing Elsevier Health Sciences
The long-standing debate about whether the State of Israel can be both Jewish and democratic raises important questions about the rights of Palestinian Arabs. In *Israel Has a Jewish Problem*, Joyce Dalsheim argues that this debate obscures another issue: Can the Jewish state protect the right to be Jewish, whatever form that "being" might take? Drawing on extensive ethnographic fieldwork, she investigates that question by looking at ways in which Jewish citizens of Israel struggle to be Jewish within the confines of a Jewish state. She focuses on everyday experiences, on public interpretations of the possibilities of being Jewish in the context of state policy, and on media representations of conflicts between Jewish citizens over social, religious, and political issues. Despite Israel's claim that every religious community "is free, by law and in practice, to exercise its faith, observe its holidays ... and administer its internal affairs," Israel is foundationally a Jewish state. It privileges Orthodox regulation of who will be considered a Jew, of marriage and family law, and of conversion. This arrangement, and the constant tensions it has produced over the years, is often understood as a compromise between secular and religious political factions. But this religious-secular framing conceals broader patterns inherent in nationalist projects more generally. Using insights from Franz Kafka's writing as a theoretical lens through which the ethnographic data can be viewed, Dalsheim interrogates the relationship between nationalism and religion, asking what kinds of liberation have been achieved by Jews in the Jewish State. Ultimately the book argues, in a Kafkaesque reversal of the liberatory promise of national sovereignty, that national self-determination involves collective self-elimination.
