Strong to Save: Maritime Mission in Hong Kong from Whampoa Reach to the Mariners' Club Bloomsbury Publishing

The landscape of international education has changed significantly in the last ten years and our understanding of concepts such as 'international', 'global' and 'multicultural' are being re-evaluated. Fully updated and revised, and now including new contributions from research in South East Asia, the Middle East, China, Japan, Australasia, and North America, the new edition of this handbook analyses the origins, interpretations and contributions of international education and explores key contemporary developments, including: internationalism in the context of teaching and learning leadership, standards and quality in institutions and systems of education the promotion of internationalism in national systems This important collection of research is an essential resource for anyone involved in the practice and academic study of international education, including researchers and teachers in universities, governmental and private curriculum development agencies, examination authorities, administrators and teachers in schools.

Shareholder engagement with publicly listed companies is often seen as a key means to monitor corporate malpractices. In this book, the authors examine the corporate governance roles of key institutional investors in UK corporate equity, including pension funds, insurance companies, collective investment funds, hedge and private equity funds and sovereign wealth funds. They argue that institutions' corporate governance roles are an instrument ultimately shaped by private interests and market forces, as well as law and regulatory obligations, and that policy-makers should not readily make assumptions regarding their effectiveness, or their alignment with public interest or social good.

Widespread Expectations of Widespread Corruption Routledge

Analysing the ongoing changes and dynamics in rural development from a functional perspective through a series of case studies from the global north and south, this volume deepens our understanding of the importance of new functional and multifunctional approaches in policy, practice and theory. In

rural areas of industrialized societies, food production as a basis for growth and employment has been declining for many decades. In the Global South, on the other hand, food production is still often the most important factor for socio-economic development. However, rural areas both in the industrialized north and in the global south are facing new challenges which lead to significant changes and threats to their development. New forms of food production, but also new functional (e.g. housing or business parks) and often multifunctional approaches are being discussed and practiced yet it remains unclear the extent to which these result in better or more sustainable development of rural areas.

This is the first book to explore how religious movements and actors shape and are shaped by aspects of global city dynamics. Theoretically grounded and empirically informed, *Religion and the Global City* advances discussions in the field of urban religion, and establishes future research directions. David Garbin and Anna Strhan bring together a wealth of ethnographically rich and vivid case studies in a diversity of urban settings, in both Global North and Global South contexts. These case studies are drawn from both 'classical' global cities such as London and Paris, and also from large cosmopolitan metropolises - such as Bangalore, Rio de Janeiro, Lagos, Singapore and Hong Kong - which all constitute, in their own terms, powerful sites within the informational, cultural and moral networked economies of contemporary globalization. The chapters explore some of the most pressing issues of our times: globalization and the role of global neo-liberal regimes; urban change and in particular the dramatic urbanization of Global South countries; and religious politics and religious revivalism associated, for instance, with transnational Islam or global Pentecostal/Charismatic Christianity.

The book *Psychosocial Perspectives on Peacebuilding* offers a template for those dealing with the aftermath of armed conflict to look at peacebuilding through a psychosocial lens. This Volume, and the case studies that are in it, starts from the premise that armed conflict and the political violence that flows from it, are deeply contextual and that in dealing with the impact of armed conflict, context matters. The book argues for a conceptual shift, in which psychosocial practices are not merely about treating individuals and groups with context and culturally sensitive methods and approaches: the contributors argue that such interventions and practices should in themselves shape social change. This is of critical importance because the psychosocial method continually highlights how the social context is one of the primary causes of individual psychological distress. The chapters in this book describe experiences within very different contexts, including Guatemala, Jerusalem, Indian Kashmir, Mozambique, Northern Ireland, South Africa and Sri Lanka. The common thread between the case studies is that they each show how psychosocial interventions and practices can influence the peacebuilding environment and foster wider social change. *Psychosocial Perspectives on Peacebuilding* is essential reading for social and peace psychologists, as well as for students and researchers in the field of conflict and peace studies, and for psychosocial practitioners and those working in post-conflict areas for NGO's.

This book compares two countries with striking parallels in economic and political outcomes, yet with some distinct features in terms of institutional structures, relative size, and culture. Therefore, this book forms a fruitful platform for the study of the similarities and differences in the economic and societal development of Japan and Finland. Despite their geographic distance from one another and the aforementioned differences, both countries experienced rather similar economic and societal development patterns after the Second World War. The study of these societies both individually and through commonalities will provide a unique perspective on the emergence of modern economies and institutions. The book provides comprehensive coverage on issues such as welfare state formation and society,

security and military spending, education system, industrial development, international trade, governmental economic policies, energy solutions, and bubbles and their collapse; thus, issues typical for these countries, as well as most modern states, studied from a longitudinal perspective. The book aims to answer a fundamental question in social science: Why do there seem to be common trends and developmental paths among countries differing in size, culture, and economic structure? This book will provide insights for those seeking to decipher how the developments in their own countries came about and where they may be headed to.

Change and development are going on all around us. On both an international platform, as well as at the local governmental and community level, governments, decision and policy makers constantly strive to improve the world in which we live, seeking to make it better and to improve quality of life. This book focuses on such development in the context of localism in the UK. It strips the principle of local sustainability down to its constituent parts and considers the extent to which it can be said to be central to local life. As part of this, it presents the case for the importance of accountability and citizen participation in achieving objectives aligned with sustainability, and illustrates the relationships that these principles share. On this foundation, it evaluates local government in the UK, as well as examples of community-led regeneration initiatives and bodies, and seeks to determine both the nature of their pursuit of sustainability and the extent to which accountability and citizen participation play a part in that pursuit. It shows that local sustainability is enhanced by accountability and citizen participation; those principles ensuring that local people can be central to the process. Whilst its evaluations of local democratic systems in the UK reveal certain issues as regards the extent to which this is reflected in practice, it at least demonstrates an enthusiasm and awareness of the important role that accountability and citizen participation can play in the process of local sustainability. The book is aimed at legal academics, with relevance also to students in law, environmental politics and sustainable development, as well as those working in government policy and political practice.

The United States and 11 other countries from both sides of the Pacific are currently negotiating the Trans-Pacific Partnership (TPP). The agreement is expected to set new benchmark for international trade through its comprehensive coverage of issues and binding regulations. It is expected to eventually mature into a regional trade agreement covering the entire Asia-Pacific. As of now, it does not include China and India, the two largest emerging markets and regional economies. The TPP has generated controversy for its excessive emphasis on trade issues, which have remained unresolved or unaddressed at the WTO due

to differences between developed and emerging markets. It has also been criticized for adopting a negotiating style reflecting the US regulatory approach to international trade and also as a geo-political strategy of the US for supporting its strategic rebalancing towards Asia. From both economic and geo-political perspectives, the TPP has various significant implications for China and India that are examined in the book. This book sheds light on how China and India's entries in the TPP are mutually beneficial and how both countries can gain from the TPP by gaining preferential access to large markets and using it as an opportunity for introducing more outward-oriented reforms. The book also cautions that US must reconcile to the rebalancing of economic power within the grouping that will occur following the entries of China and India. Otherwise, the TPP and China and India might walk divergent paths and trade and regional integration in Asia-Pacific may not ever converge. This book will interest anyone who wishes to learn more about the TPP and its future implications and challenges and China and India's roles in global and regional trade.

A Study into the Global Phenomenon Oxford University Press

Leading academics from around the world, who specialize in analysing maritime strategic issues, deliberate the impact of the American 'pivot' or 're-balance' strategy, and the 'Air-Sea Battle' operational concept, on the maritime power and posture of a number of selected states. Intending to strengthen US economic, diplomatic, and security engagement throughout the Asia-Pacific, both bilaterally and multilaterally, the re-balance stands out as one of the Obama administration's most far-sighted and ambitious foreign policy initiatives.

The book draws upon the expertise and international research collaborations forged by the Worldwide Universities Network Global Africa Group to critically engage with the intersection, in theory and practice, of the Sustainable Development Goals (SDGs) and Africa's development agendas and needs. Further, it argues that – and demonstrates how – the SDGs should be understood as an aspirational blueprint for development with multiple meanings that are situated in dynamic and contested terrains. As the SDGs have substantial implications for development policy and resourcing at both the macro and micro levels, their relevance is not only context-specific but should also be assessed in terms of the aspirations and needs of ordinary citizens across the continent. Drawing on analyses and evidence from both the natural and social sciences, the book demonstrates that progress towards the SDGs must meet demands for improving human well-being under diverse and challenging socio-economic, political and environmental conditions. Examples include those from the mining industry, public health, employment and the media. In closing, it highlights how international collaboration in the form of research networks can enhance the production of critical knowledge on and engagement with the SDGs in Africa.

Globalization is commonly described in trade and cultural terms but its impact on unions and collective bargaining is seldom

assessed. The few studies of unions and globalization are mostly collections of cases studies of how unions can work together or with other alliance partners to defend against the power of multinational corporations. This book goes beyond the current research by asking how unions have tried to deal with globalization and how globalization might threaten the fundamental union mission of taking wages, hours and conditions of employment out of competition. The introductory chapter defines globalization and uses the case of the Detroit Three automakers (GM, Chrysler and Ford) to show how globalization can affect employment and union size, influence and relevancy. The second chapter shows how unions deal globalization through collective bargaining regarding outsourcing, alliances, strikes and political action, including lobbying and international work standards. The final chapter argues that the unions cannot continue unchanged in this age of globalization and asks what they must do to be effective and relevant.

The 'Complete Streets' concept and movement in urban planning and policy has been hailed by many as a revolution that aims to challenge the auto-normative paradigm by reversing the broader effects of an urban form shaped by the logic of keeping automobiles moving. By enabling safe access for all users, Complete Streets promise to make cities more walkable and livable and at the same time more sustainable. This book problematizes the Complete Streets concept by suggesting that streets should not be thought of as merely physical spaces, but as symbolic and social spaces. When important social and symbolic narratives are missing from the discourse and practice of Complete Streets, what actually results are incomplete streets. The volume questions whether the ways in which complete streets narratives, policies, plans and efforts are envisioned and implemented might be systematically reproducing many of the urban spatial and social inequalities and injustices that have characterized cities for the last century or more. From critiques of a "mobility bias" rooted in the neoliberal foundations of the

Complete Streets concept, to concerns about resulting environmental gentrification, the chapters in *Incomplete Streets* variously call for planning processes that give voice to the historically marginalized and, more broadly, that approach streets as dynamic, fluid and public social places. This interdisciplinary book is aimed at students, researchers and professionals in the fields of urban geography, environmental studies, urban planning and policy, transportation planning, and urban sociology.

International Politics of Authoritarian Rule International E Publication

This book gives a comprehensive overview of all relevant elements in topography and their practical application. It elaborates on the classical representation of terrain on maps such as cartographic projections, together with their classification, scale, and geographical elements. It is richly illustrated with photographs, maps and figures, in which the theoretical explanations are clarified. Readers will become acquainted with the physical characteristics of the ground, i.e. tectonic and erosive shapes, the importance and classification of terrain, genetic (fluvial, abrasive, glacial, karst) and topographic types such as higher (mountains, hills, peaks) and lower terrain (valleys, fields). In addition, the book discusses cartometry and coordinate systems, orientation in space (geographic, topographic, tactical) including by means of maps, instruments and the night sky and elaborates new techniques and technologies such as aerial photogrammetric imagery, global navigation satellite systems and LiDAR. The book also includes methods for the practical execution of concrete measurement operations, such as determining position and movement on land with maps, compass and azimuth which makes it especially useful for practitioners and professionals, e.g., for landscape planning, military exercises, mountaineering, nature walks etc. As such it offers a valuable guide not only for undergraduate students but also for researchers in the fields of geography, geosciences, geodesy, ecology, forestry and related areas looking for an overview on topography. Uniquely, the book also features an extensive glossary of topographical terms.
