Sparse direct solvers are recommended for large 3D finite element models such as multi-story buildings, shell structures, and solid structures. The sparse method involves solving the linear equation system  $K \cdot x = b$  or the equation system of eigenvalue problems  $K\phi - \lambda B\phi = 0$ . The direct sparse solvers (SPDS) are efficient computational techniques based on decomposition of the matrix  $K = L \cdot U$  with a considerably less number of matrix elements different from zero.
