Encouraging the participation of girls and women in science, technology, engineering and mathematics (STEM) remains as vital today as it was in the 1970s. ... hence, the sub-title: "A Never Ending Story." This volume is about

ongoing advocacy on behalf of the future workforce in fields that lie on the cutting edge of society's future. Acknowledging that deeply embedded beliefs about social and academic entitlement take generations to overcome, the editors of this volume forge forward in the knowledge that these chapters will resonate with readers and that those in positions of access will learn more about how to provide opportunities for girls and women that propel them into STEM fields. This volume will give the reader

insight into what works and what does not work for providing the message to girls and women that indeed STEM fields are for them in this second decade of the 21st century. Contributions to this volume will connect to readers at all levels of STEM education and workforce participation. Courses that address teaching and learning in STEM fields as well as courses in women's studies and the sociology of education will be enhanced by accessing this volume. Further, students and scholars in STEM fields will identify with the success stories related in some of these chapters and find inspiration in the ways their own journeys are reflected by this volume.

Focused on physical literacy and measurable outcomes, empowering physical educators to help students meet the Common Core standards, and coming from a recently renamed but longstanding organization intent on shaping a standard of excellence in physical education, National Standards & Grade-Level Outcomes for K-12 Physical Education is all that and much more. Created by SHAPE America — Society of Health and Physical Educators (formerly AAHPERD) — this text unveils the new National Standards for K-12 Physical Education. The standards and text have been retooled to support students' holistic development. This is the third iteration of the National Standards for K-12 Physical Education, and this latest version features two prominent changes:

•The term physical literacy underpins the standards. It encompasses the three domains of physical education (psychomotor, cognitive, and affective) and considers not only physical competence and knowledge but also attitudes, motivation, and the social and psychological skills needed for participation. • Grade-level outcomes support the national physical education standards. These measurable outcomes are organized by level (elementary, middle, and high school) and by standard. They provide a bridge between the new standards and K-12 physical education curriculum development and make it easy for teachers to assess and track student progress across grades, resulting in physically literate students. In developing the grade-level outcomes,

the authors focus on motor skill competency, student engagement and intrinsic motivation, instructional climate, gender differences, lifetime activity approach, and physical activity. All outcomes are written to align with the standards and with the intent of fostering lifelong physical activity. National Standards & Grade-Level Outcomes for K-12 Physical Education presents the standards and outcomes in ways that will help preservice teachers and current practitioners plan curricula, units, lessons, and tasks. The text also • empowers physical educators to help students meet the Common Core standards; • allows teachers to see the new standards and the scope and sequence for outcomes for all grade levels at a glance in a colorful, easy-to-

read format; and • provides administrators, parents, and policy makers with a framework for understanding what students should know and be able to do as a result of their physical education instruction. The result is a text that teachers can confidently use in creating and enhancing high-quality programs that prepare students to be physically literate and active their whole lives.

From Stupefied Youth to Dangerous

Adults Back in 2008, Mark Bauerlein was a voice crying in the wilderness. As experts greeted the new generation of “Digital Natives” with extravagant hopes for their high-tech future, he pegged them as the “Dumbest Generation.” Today, their future doesn’t look so bright, and their present is pretty grim. The twenty-somethings who spent their childhoods staring into a screen are lonely and purposeless, unfulfilled at work and at home. Many of them are even suicidal. The Dumbest Generation Grows Up is an urgently needed update on the Millennials, explaining their not-so-quiet desperation and, more important, the threat that their ignorance poses to the rest of us. Lacking skills, knowledge, religion, and a cultural frame of reference, Millennials

are anxiously looking for something to fill the void. Their mentors have failed them. Unfortunately, they have turned to politics to plug the hole in their souls. Knowing nothing about history, they are convinced that it is merely a catalogue of oppression, inequality, and hatred. Why, they wonder, has the human race not ended all this injustice before now? And from the depths of their ignorance rises the answer: Because they are the first ones to care! All that is needed is to tear down our inherited civilization and replace it with their utopian aspirations. For a generation unacquainted with the constraints of human nature, anything seems possible. Having diagnosed the malady before most people realized the patient was sick, Mark Bauerlein surveys the psychological and social wreckage

and warns that we cannot afford to do this to another generation.

The Cellular Secretome and Organ
Crosstalk focuses on the release of
peptides and proteins from different
organs and their specific functions in
metabolic regulation and cell- and organ
crosstalk. The book is written for experts
in the field, however, for each topic,
helpful references are included. The
book also includes technical sections
that summarize the state-of-the-art of
secretome and crosstalk analysis. This
book fulfills the need for a resource that
comprehensively describes the current

knowledge of secretome biology in health and disease. Communication between different organs involves lipids and other small molecules and a host of proteins and peptides comprising the secretome of different organs (organokinome). More than 600 adipokines have been identified, and an increasing number of hepatokines and myokines have recently been discovered with mostly unknown physiological impact. Importantly, an aberrant signature of the organokinome may be critically underlying a variety of metabolic diseases and may determine the individual susceptibility to disease development. Summarizes our current knowledge on the secretome of different cells and tissues Dissects auto-, para- and endocrine functions of major

secreted peptides and proteins Analyzes the secretory malfunction of different cells and its impact for disease development Authored by a leader in the field, presenting a coherent view on this very complex topic

The second volume of the African Higher Education Dynamics Series brings together the research of an international network of higher education scholars with interest in higher education and student politics in Africa. Most authors are early career academics who teach and conduct research in universities across the continent, and who came together for a research project and related workshops and a symposium on

student representation in African higher education governance. The book includes theoretical chapters on student organising, student activism and representation; chapters on historical and current developments in student politics in Anglophone and Francophone Africa; and in-depth case studies on student representation and activism in a cross-section of universities and countries. The book provides a unique resource for academics, university leaders and student affairs professionals as well as student leaders and policy-makers in Africa and elsewhere.

The World Book Encyclopedia World Book

Psychomotor symptoms are those symptoms that are characterized by deficits in the initiation, execution and

monitoring of movements, such as psychomotor slowing, catatonia, neurological soft signs (NSS), reduction in motor activity or extrapyramidal symptoms (EPS). These symptoms have not always received the attention they deserve although they can be observed in a wide range of psychiatric illnesses, including mood disorders, psychotic disorders, anxiety disorders, pervasive developmental disorders and personality disorders. Nevertheless, these symptoms seem to have prognostic value on clinical and functional outcome in several pathologies. In the late 19th century, the founding fathers of modern psychiatry (including Kahlbaum, Wernicke, Kraepelin and Bleuler) had a strong focus on psychomotor abnormalities in their description and

definitions of psychiatric illnesses and systematically recognized these as core features of several psychiatric pathologies. Nevertheless, emphasis on these symptoms has reduced substantially since the emergence of psychopharmacology, given the association between antipsychotics or antidepressants and medication-induced motor deficits. This has resulted in the general idea that most if not all psychomotor deficits were merely side effects of their treatment rather than intrinsic features of the illness. Yet, the last two decades a renewed interest in these deficits can be observed and has yielded an exponential growth of research into these psychomotor symptoms in several psychiatric illnesses. This recent evolution is also

reflected in the increased appreciation of these symptoms in the DSM-5. As a result of this increased focus, new insights into the clinical and demographical presentation, the etiology, the course, the prognostic value as well as treatment aspects of psychomotor symptomatology in different illnesses has emerged. Still, many new questions arise from these findings. This research topic is comprised of all types of contributions (original research, reviews, and opinion piece) with a focus on psychomotor symptomatology in a psychiatric illness, especially research focusing on one or more of the following topics: the clinical presentation of the psychomotor syndrome; the course through the illness; the diagnostic specificity of the

syndrome; the underlying neurobiological or neuropsychological processes; new assessment techniques; pharmacological or non-pharmacological treatment strategies.

The Pain of Modern Civilization, authors Dr. Ajay Issar and Alka Issar offer a four-factor model of chronic disease that not only links these behaviours with their physical consequences, but explains in detail the means of assailing them. Here is a practical, personalized approach aimed at health promotion and shared compellingly by way of case studies, recipes, and advice for exercise and creating structure in your day. This book clarifies common myths about chronic disease and extends tools readers can employ in their own war against OUCH. OUCH!
