CASSANDRA RAYMOND

Bagasse BoD - Books on Demand

Over the past 50 years, triazines have made a great impact on agriculture and world hunger by assisting in the development of new farming methods, providing greater farming and land use capabilities, and increasing crop yields. Triazines are registered in over 80 countries and save billions of dollars a year. The Triazine Herbicides is the one book that presents a comprehensive view of the total science and agriculture of these chemicals. With emphasis on how the chemicals are studied and developed, reviewed, and used at the agricultural level this book provides valuable insight into the benefits of triazine herbicides for sustainable agriculture. - Presents previously unpublished information on the discovery, development and marketing of herbicides - Includes a vital section on the origin, use, economics and fate of triazine herbicides - Covers benefits of triazines in corn and sorghum, sugarcane, citrus, fruit and nut crops - Establishes best management practice and environmental benefits of use in conservation tillage
Plant Genetic Engineering ASIA PACIFIC BUSINESS PRESS Inc.
 Sugarcane grows in all tropical and subtropical countries. Sucrose as a commercial product is produced in many forms worldwide. Sugar was first manufactured from sugarcane in India, and its manufacture has spread from there throughout the world. The manufacture of sugar for human consumption has been characterized from time immemorial by the transformation of the collected juice of sugar bearing plants, after some kind of purification of the juice, to a concentrated solid or semi solid product that could be packed, kept in containers and which had a high degree of keep ability. The efficiency with which juice can be extracted from the cane is limited by the technology used. Sugarcane processing is focused on the production of cane sugar (sucrose) from sugarcane. The yield of sugar & Jaggery from sugar cane depends mostly on the quality of the cane and the efficiency of the extraction of juice. Other products of the processing include bagasse, molasses, and filter cake. Sugarcane is known to be a heavy consumer of synthetic fertilizers, irrigation water, micronutrients and organic carbon. Molasses is produced in two forms: inedible for humans (blackstrap) or as edible syrup. Blackstrap molasses is used primarily as an animal feed additive but also is used to produce ethanol, compressed yeast, citric acid, and rum. Edible molasses syrups are often blended with maple syrup, invert sugars, or corn syrup. Cleanliness is vital to the whole process of sugar manufacturing. The biological software is an important biotechnical input in sugarcane cultivation. The use of these products will encourage organic farming and sustainable

agriculture. The book comprehensively deals with the manufacture of sugar from sugarcane and its by-products (Ethyl Alcohol, Ethyl Acetate, Acetic Anhydride, By Product of Alcohol, Press mud and Sugar Alcohols), together with the description of machinery, analysis of sugar syrup, molasses and many more. Some of the fundamentals of the book are improvement of sugar cane cultivation, manufacture of Gur (Jaggery), cane sugar refining: decolourization with absorbent, crystallization of juice, exhaustibility of molasses, colour of sugar cane juice, analysis of the syrup, massecuites and molasses bagasse and its uses, microprocessor based electronic instrumentation and control system for modernisation of the sugar industry, etc. Research scholars, professional students, scientists, new entrepreneurs, sugar technologists and present manufacturers will find valuable educational material and wider knowledge of the subject in this book. Comprehensive in scope, the book provides solutions that are directly applicable to the manufacturing technology of sugar from sugarcane plant. TAGS Acetic Anhydride from Molasses, Alcohol from Molasses, Analysis of Sugar, Bagasse and its Uses, Best small and cottage scale industries, Business guidance for sugarcane production, Business guidance to clients, Business Plan for a Startup Business, Business plan for sugarcane production, Business start-up, By Products of Molasses, Composition of Sugar Cane and Juice, Ethyl Acetate from Molasses, Ethyl Alcohol from Molasses, Extraction of sucrose from sugarcane, Get started in small-scale sugar manufacturing, Great Opportunity for Startup, How Is Cane Sugar Processed, How is sugar made from sugarcane?, How Sugar Cane Is Made, How sugar is made, How to Make Sugar from Sugar Cane, How to make sugar from sugarcane, How to manufacture sugar from sugarcane, How to start a successful Sugarcane processing business, How to start a Sugar manufacturing business, How to Start a Sugar Production Business, How to Start a Sugarcane processing?, How to Start and Make Profit from Sugar-Cane, How to start process of making sugar from sugarcane, How to Start Sugar Cane Farming, How to start Sugar making Process from sugarcane, How to Start Sugar Manufacturing Process, How to start sugar production from Cane Sugar or Sugarcane, How to Start Sugarcane Processing Industry in India, Manufacture of gur, Manufacture of Jaggery, Modern small and cottage scale industries, Most Profitable Sugarcane Processing Business Ideas, New small scale ideas in Sugarcane processing industry, Press mud and Sugar Alcohols, Process of Cane Sugar Refining, Products Sugar By-Products, Profitable small and cottage scale industries, Profitable Small Scale sugar Manufacturing, Project for startups, Setting up and opening your Sugarcane Business, Setting up of Sugarcane Processing Units, Small scale Commercial sugar making, Small scale Sugarcane by products production line, Small Scale Sugarcane Processing Projects, Small Start-up Business Project, Small-Scale Sugar-cane

Unit Operations in Cane Sugar Production Academic Press
 Sugarcane Biorefinery, Technology and Perspectives Academic Press

Membrane Technology and Engineering for Water Purification Nova Science Publishers

Sugarcane is a C4, perennial, sucrose-storing grass belonging to the genus *Saccharum* (Arceneaux, 1965) that originated in Asia, and it is a cultivated crop in tropical and subtropical countries throughout the world. Among the countries cultivating sugarcane, Brazil is the largest producer. Sugarcane has been harvested for human and animal consumption for centuries, and in recent decades, it has been used for fuel production by juice fermentation (first-generation ethanol). The primary sugarcane by-products are molasses, used as ruminant feed and as a sugar substitute, and bagasse, a source of fibres for animal diets and bioelectricity. This book discusses the production, consumption and agricultural management systems of sugarcane.

The Challenges and Way Forward for the Sugar Sub-sector in Kenya Butterworth-Heinemann

Crop Physiology: Case Histories of Major Crops updates the physiology of broad-acre crops with a focus on the genetic, environmental and management drivers of development, capture and efficiency in the use of radiation, water and nutrients, the formation of yield and aspects of quality. These physiological process are presented in a double context of challenges and solutions. The challenges to increase plant-based food, fodder, fiber and energy against the backdrop of population increase, climate change, dietary choices and declining public funding for

research and development in agriculture are unprecedented and urgent. The proximal technological solutions to these challenges are genetic improvement and agronomy. Hence, the premise of the book is that crop physiology is most valuable when it engages meaningfully with breeding and agronomy. With contributions from 92 leading scientists from around the world, each chapter deals with a crop: maize, rice, wheat, barley, sorghum and oat; quinoa; soybean, field pea, chickpea, peanut, common bean, lentil, lupin and faba bean; sunflower and canola; potato, cassava, sugar beet and sugarcane; and cotton. A crop-based approach to crop physiology in a G x E x M context Captures the perspectives of global experts on 22 crops

[Biomass Now Academic Press](#)

Industrial Wastewater Treatment, Recycling and Reuse is an accessible reference to assist you when handling wastewater treatment and recycling. It features an instructive compilation of methodologies, including advanced physico-chemical methods and biological methods of treatment. It focuses on recent industry practices and preferences, along with newer methodologies for energy generation through waste. The book is based on a workshop run by the Indus MAGIC program of CSIR, India. It covers advanced processes in industrial wastewater treatment, applications, and feasibility analysis, and explores the process intensification approach as well as implications for industrial applications. Techno-economic feasibility evaluation is addressed, along with a comparison of different approaches illustrated by specific case studies. **Industrial Wastewater Treatment, Recycling and Reuse** introduces you to the subject with specific reference to problems currently being experienced in different industry sectors, including the petroleum industry, the fine chemical industry, and the specialty chemicals manufacturing sector. - Provides practical solutions for the treatment and recycling of industrial wastewater via case studies - Instructive articles from expert authors give a concise overview of different physico-chemical and biological methods of treatment, cost-to-benefit analysis, and process comparison - Supplies you with the relevant information to make quick process decisions

[A Guide to Sugarcane Diseases OECD Publishing](#)

Around the world, many countries are increasing efforts to promote biomass production for industrial uses including biofuels and bio-products such as chemicals and bio-plastic. Against a backdrop of lively public debate on sustainability, bioenergy yields both positive and negative impacts upon a variety of environmental and socio-economic issues. These include property rights, labor conditions, social welfare, economic wealth, poverty reduction and more. This book discusses the issues and impacts of bioenergy, taking into account the local and regional framework under which bioenergy is produced, touching upon educational level, cultural aspects, the history and economies of the producing countries and an array of policies including environmental and social targets. The book surveys and analyzes global bioenergy production from a number of perspectives. The authors illustrate the complexity of interrelated topics in the bioenergy value chain, ranging from agriculture to conversion processes, as well as from social implications to environmental effects. It goes on to offer insight on future challenges associated with the expected boom of a global bio-based economy, which contributes to the paradigm shift from a fossil-based to a biomass and renewable energy-based economy. The expert contributors include researchers, investors, policy makers, representatives from NGOs and other stakeholders, from Europe, Africa, Asia and Latin America. Their contributions build upon the results of the Global-Bio-Pact project on "Global Assessment of Biomass and Bio-product Impacts on Socio-economics and Sustainability," which was supported by the European Commission in its 7th Framework Program for Research and Technological Development, conducted from February 2010 to January 2013. The book benefits policy makers, scientists and NGO staffers working in the fields of agriculture, forestry, biotechnology and energy.

Biomass Production and Uses Springer Science & Business Media Sugarcane bagasse is considered a by-product of the sugar-alcohol industries. However, in the last few decades, this biomass has been used mainly for energy generation. Considering the widespread uses of sugarcane bagasse, the authors begin with a focus on detailed information about the main producers of sugarcane and world availability for its plantation. Different approaches for extracting the cellulosic and hemicellulosic fractions are also described. Next, the impact of certain production variables on the yield and surface area of sugarcane bagasse derived activated carbon are investigated. The physicochemical properties of the produced activated carbon including pH, moisture content, fixed carbon, volatile matter and ash content are also investigated. Efforts aiming at the utilization of lignocellulosic materials as alternative sources of chemicals and energy have been increasing due to the concern about growth of CO₂ emissions. As such, the authors discuss recent advances in biotechnology and the development of the biorefinery concept which have expanded the possibilities of bagasse application. The authors go on to discuss the advances made so far for the biotechnological conversion of bagasse to biofuels and useful chemicals in order to determine which further efforts are yet

required to establish the fermentation of sugars derived from bagasse on an industrial scale. Bagasse fiber is composed of comparable amount of lignocellulosic cell materials, therefore it has a high potential to be utilized a promising economic and eco-benign alternative to gasoline. Current proposals for the diversification of traditional uses of bagasse and lignocellulosic biorefineries are analyzed, with emphasis on sustainable biofuels, organic fertilizers, human food and livestock, from the point of view of production and marketing. Necessary strategies for their management that allow for sustainable use as feedstock are also discussed. Lastly, the authors study the gasification of sugarcane bagasse through the theoretical description of the process, analysis of environmental impacts and computational simulation of the gasification of bagasse and straw using a non-stoichiometric chemical equilibrium model.

Sugar Water Editions Quae

"Shanti is a heroine that the reader will not easily forget. The story that is told here is worth not only knowing but also remembering." - Siphwi Gloria Ndlovu, author, filmmaker and academic Vividly set against the backdrop of 19th century India and the British-owned sugarcane plantations of Natal, written with great tenderness and lyricism, *Children of Sugarcane* paints an intimate and wrenching picture of indenture told from a woman's perspective. Shanti, a bright teenager stifled by life in rural India and facing an arranged marriage, dreams that South Africa is an opportunity to start afresh. The Colony of Natal is where Shanti believes she can escape the poverty, caste, and troubling fate of young girls in her village. Months later, after a harrowing sea voyage, she arrives in Natal only to discover the profound hardship and slave labour that await her. Spanning four decades and two continents, *Children of Sugarcane* demonstrates the life-giving power of love, heartache, and the indestructible bonds between family and friends. These bonds prompt heroism and sacrifice, the final act of which leads to Shanti's redemption.

Green Chemistry and Engineering John Wiley & Sons

While the Yucatán Peninsula of Mexico may conjure up images of vacation getaways and cocktails by the sea, these easy stereotypes hide a story filled with sweat and toil. The story of sugarcane and rum production in the Caribbean has been told many times. But few know the bittersweet story of sugar and rum in the jungles of the Yucatán Peninsula during the nineteenth century. This is much more than a history of coveted commodities. The unique story that unfolds in John R. Gust and Jennifer P. Mathews's new history *Sugarcane and Rum* is told through the lens of Maya laborers who worked under brutal conditions on small haciendas to harvest sugarcane and produce rum. Gust and Mathews weave together ethnographic interviews and historical archives with archaeological evidence to bring the daily lives of Maya workers into focus. They lived in a cycle of debt, forced to buy all of their supplies from the company store and take loans from the hacienda owners. And yet they had a certain autonomy because the owners were so dependent on their labor at harvest time. We also see how the rise of cantinas and distilled alcohol in the nineteenth century affected traditional Maya culture and that the economies of Cancún and the Mérida area are predicated on the rum-influenced local social systems of the past. *Sugarcane and Rum* brings this bittersweet story to the present and explains how rum continues to impact the Yucatán and the people who have lived there for millennia.

The Complete Book on Sugarcane Processing and By-Products of Molasses (with Analysis of Sugar, Syrup and Molasses) BoD - Books on Demand

Der Zuckermarkt ist weltweit - und ganz besonderes angesichts der jüngsten Entwicklungen in Osteuropa und Kuba - von besonderer Bedeutung. Dieses einzigartige Nachschlagewerk bietet umfangreiche Hintergrundinformationen zur Geschichte des Zuckers, zu Anbau und Verbrauch. Ausführlich werden der wachsende Produktionssektor sowie Tendenzen in Weltproduktion, Verbrauch und Handel erläutert und umfangreiches Zahlenmaterial zu Produktion, Export, Vertrieb, Verträgen, Verbrauch, Handel und Preisen zur Verfügung gestellt. Das Buch beleuchtet die Produktionspolitik der weltgrößten Zuckererzeuger, die künftige Entwicklung in Osteuropa und Kuba sowie mögliche Zuckerersatzstoffe, den Zuckerhandelszyklus und Marketingketten und den Zuckerterminmarkt (Futures). (11/97)

Sustainable Sugarcane Production CRC Press

OECD and FAO have developed this guidance to help enterprises observe standards of responsible business conduct and undertake due diligence along agricultural supply chains in order to ensure that their operations contribute to sustainable development.

Sugarcane Biorefinery, Technology and Perspectives

Jonathan Ball Publishers

Residues from agriculture and the food industry consist of many and varied wastes, in total accounting for over 250 million tonnes of waste per year in the UK alone. Biotechnological processing of these residues would allow these waste products to be used as a resource, with tremendous potential. An extensive range of valuable and usable products can be recovered from what was previously considered waste: including fuels, feeds and pharmaceutical products. In this way Biotechnology can offer many viable alternatives to the disposal of agricultural waste, producing several new products in the process. This book

presents up-to-date information on a biotechnology approach for the utilisation of agro-industrial residues, presenting chapters with detailed information on materials and bioconversion technology to obtain products of economic importance: The production of industrial products using agro-industrial residues as substrates The biotechnological potential of agro-industrial residues for bioprocesses Enzymes degrading agro-industrial residues and their production Bioconversion of agro-industrial residues. Written by experts in Biotechnological processing of Agro-Industrial Residues, this book will provide useful information for academic researchers and industry scientists working in biotechnology, waste management, agriculture and the food industry.

Experiments with Fertilizers Elsevier

This book offers a broad understanding of bioethanol production from sugarcane, although a few other substrates, except corn, will also be mentioned. The 10 chapters are grouped in five sections. The Fuel Ethanol Production from Sugarcane in Brazil section consists of two chapters dealing with the first-generation ethanol Brazilian industrial process. The Strategies for Sugarcane Bagasse Pretreatment section deals with emerging physicochemical methods for biomass pretreatment, and the non-conventional biomass source for lignocellulosic ethanol production addresses the potential of weed biomass as alternative feedstock. In the Recent Approaches for Increasing Fermentation Efficiency of Lignocellulosic Ethanol section, potential and research progress using thermophile bacteria and yeasts is presented, taking advantage of microorganisms involved in consolidating or simultaneous hydrolysis and fermentation processes. Finally, the Recent Advances in Ethanol Fermentation section presents the use of cold plasma and hydrostatic pressure to increase ethanol production efficiency. Also in this section the use of metabolic-engineered autotrophic cyanobacteria to produce ethanol from carbon dioxide is mentioned.

Fuel Ethanol Production from Sugarcane University of Arizona Press

This book has been prepared for those seeking a better understanding of the functioning of crop plants, particularly the processes that lead to the generation of products valued by human beings. The contributors, who are among the world's foremost experts on the important crops upon which humanity depends for food or fibre, address the relevant processes for their specific crop. Currently, the world population is continuing to increase. It is projected to plateau around the middle of the next century, and while there is considerable controversy regarding the population level when this plateau is achieved, most estimates are in the area of 10 000 000 000. At present, there are about 800000000 people in the world who do not have secure access to food. Over the last 50 years various aspects of agricultural research have been combined to increase the output of world crops approximately 2.5-fold. Given the need to feed the increasing population, and to provide better access, it is predicted that during the next 50 years the agricultural research community must repeat this achievement.

Industrial Wastewater Treatment, Recycling and Reuse

Sugarcane Biorefinery, Technology and Perspectives

This book is a geography of the sugar cane industry from its origins to 1914. It describes its spread from India into the Mediterranean during medieval times, to the Americas and its subsequent diffusion to most parts of the tropics. It examines the changes in agricultural and manufacturing techniques over the centuries, and its impact in forming the multicultural societies of the tropical world.

Crop Yield John Wiley & Sons

A visionary approach to eliminating industrial waste streams . . . Here is a revolutionary solution to problems of industrial wastemanagement by creating a system of environmentally balanced "industrial complexes" in which groups of industrial plants consume each other's waste--not only benefiting the environment, but also significantly reducing production costs. Providing a clear introduction to this novel approach, *ZeroPollution for Industry* goes right to the heart of what environmental scientists, engineers, and administrators grapple with these days. It takes pollution prevention to the next level, past current reduction and reuse methods, and anticipates government regulations and societal trends that would factor environmental damage into production costs. Also suitable as a companion volume for traditional industrial waste management texts at the graduate level, this thought-provoking book: * Covers hot new material under consideration by professionals and policymakers, including the EPA and the NSF * Discusses the basics of waste minimization and waste reuse as well as zero-pollution industrial complexing * Presents detailed examples of how complexes in different industries could be structured * Describes how to change industrial plant design practices to prevent pollution * Teaches innovative production techniques for environmental protection to future engineers and administrators * Shows how to plan for a pollution-free environment from an administrative point of view Concise and uncluttered, this book is an eye-opener for anyone who would like to work toward a world free of industrial pollution in our fragile environment.

Socio-Economic Impacts of Bioenergy Production

Butterworth-Heinemann

Sugarcane has garnered much interest for its potential as a viable renewable energy crop. While the use of sugar juice for ethanol production has been in practice for years, a new focus on using the fibrous co-product known as bagasse for producing renewable fuels and bio-based chemicals is growing in interest. The success of these efforts, and the development of new varieties of energy canes, could greatly increase the use of sugarcane and sugarcane biomass for fuels while enhancing industry sustainability and competitiveness. Sugarcane-Based Biofuels and Bioproducts examines the development of a suite of established and developing biofuels and other renewable products derived from sugarcane and sugarcane-based co-products, such as bagasse. Chapters provide broad-ranging coverage of sugarcane biology, biotechnological advances, and breakthroughs in production and processing techniques. This text brings together essential information regarding the development and utilization of new fuels and bioproducts derived from sugarcane. Authored by

experts in the field, Sugarcane-Based Biofuels and Bioproducts is an invaluable resource for researchers studying biofuels, sugarcane, and plant biotechnology as well as sugar and biofuels industry personnel.

Elsevier

This volume is intended for reference by the commercial sugar cane grower. Disciplines are covered for the successful production of a sugar cane crop. A number of good books exist on field practices related to the growing of sugar cane. Two examples are R.P. Humbert's *The Growing of Sugar Cane* and Alex G. Alexander's *Sugarcane Physiology*. Volumes of technical papers, produced regularly by the International Society of Sugar Cane Technologists, are also a source of reference. Perhaps foremost, local associations, such as the South African Sugar Technologists' Association, do excellent work in this regard. In my forty-five years of experience with the day-to-day problems of producing a satisfactory crop of sugar cane, deciding what should be done to produce such a crop was not straightforward. Although the literature dealing with specific subjects is extensive, I tried to consolidate some of the material to provide the man in the field

with information, or an overview of the subject matter.

Sugarcane Biofuels John Wiley & Sons

European markets almost exclusively relied on Caribbean sugar produced by slave labor until abolitionist campaigns began around 1800. Thereafter, importing Asian sugar and transferring plantation production to Asia became a serious option for the Western world. In this book, Ulbe Bosma details how the British and Dutch introduced the sugar plantation model in Asia and refashioned it over time. Although initial attempts by British planters in India failed, the Dutch colonial administration was far more successful in Java, where it introduced in 1830 a system of forced cultivation that tied local peasant production to industrial manufacturing. A century later, India adopted the Java model in combination with farmers' cooperatives rather than employing coercive measures. Cooperatives did not prevent industrial sugar production from exploiting small farmers and cane cutters, however, and Bosma finds that much of modern sugar production in Asia resembles the abuses of labor by the old plantation systems of the Caribbean.
