Part Primary Colors, part House of Cards,  
The Means is a "compelling psychic  
drama" (Forbes.com) and a "tale of  
political intrigue" (The Free Lance-Star)

that takes you deep into high-stakes politics where everyone has something to hide. Tom Pauley is a conservative trial attorney in Durham, NC, who is tapped by GOP leaders to campaign for the Governor's mansion. His bold style makes him a favorite for a run at the White House. Mitchell Mason is the president-elect of the United States, pushed into politics by a father determined to create a political dynasty. Mason manages the

White House with a personal touch that makes as many friends as enemies. Samantha Davis is a child actor-turned-lawyer-turned-journalist, working her way up from the bottom in a competitive industry. She is determined and brilliant, and her dogged pursuit of a decade-old story could trigger a scandal that would upend the political landscape. New York Times bestselling author Douglas Brunt's "fast-paced, noirish novel" (Library

Journal) creates an incisive portrait of ambition, power, and what it takes to win in the ruthless world of politics today.

Princeton Review

This book is exceptional in the sense that it provides an introduction to law in general rather than the law of one specific jurisdiction, and it presents a unique way of looking at legal education. It is crucial for lawyers to be aware of the different ways in which societal problems can be solved and to be able to discuss the advantages and disadvantages of different legal solutions. In this respect, being a lawyer involves being able to reason like a lawyer, even more than having detailed knowledge of particular sets of rules. Introduction to Law reflects this view by focusing on the functions of rules and on ways of arguing the relative qualities of alternative legal solutions. Where 'positive' law is discussed, the emphasis is on the legal questions that must be addressed by a field of law and on the different solutions which have been adopted by, for instance, the common law and civil law tradition. The law of specific jurisdictions is discussed to illustrate possible answers to questions such as

when the existence of a valid contract is assumed.

Improve YOUR world. Dean Karlan and Jonathan Morduch's Macroeconomics 3e is built around the central concept that economics is a powerful and positive tool that students can use right now to improve their world. Macroeconomics uses examples and issues that resonate with students' experience to draw them in and frame ideas to help develop their economic intuition. - Using a balanced approach, students are able to sharpen their own understanding of topics by focusing on the data and evidence behind the effects they see. Students are equipped to understand and respond to real-life situations through their new economic lens and challenged to decide how they will improve their world. - The third edition delivers core economic concepts along with exciting new ideas in economic thought and strives to keep students engaged by confronting issues that are important in the world. - This text combines a familiar curriculum with material from new research and applied areas such as finance, behavioral

economics, and the political economy. Students and faculty will find content that breaks down barriers between what takes place in the classroom and what happens in our nation and our world, with applications that are driven by empirical evidence, data, and research. - Karlan and Morduch show students that economics is a tool to improve one's own life and promote better public and business policies in the world. At the same time, this third edition challenges students to reach their own conclusions about how they will improve their world.

Harold Wilson's famous reference to 'white heat' captured the optimistic spirit of a society in the midst of breathtaking change. From the gaudy pleasures of Swinging London to the tragic bloodshed in Northern Ireland, from the intrigues of Westminster to the drama of the World Cup, British life seemed to have taken on a dramatic new momentum. The memories, images and colourful personalities of those heady times still resonate today: mop-tops and mini-skirts, strikes and demonstrations, Carnaby

Street and Kings Road, Harold Wilson and Edward Heath, Mary Quant and Jean Shrimpton, Enoch Powell and Mary Whitehouse, Marianne Faithfull and Mick Jagger. In this wonderfully rich and readable historical narrative, Dominic Sandbrook looks behind the myths of the Swinging Sixties to unearth the contradictions of a society caught between optimism and decline.

Foundations in Human Development

There was a time when birth was treated as a natural process rather than a medical condition. Before 1800, women gave birth seated in birth chairs or on stools and were helped along by midwives. Then societal changes in attitudes toward women and the practice of medicine made birthing a province of the male-dominated medical profession. In *Birth Chairs, Midwives, and Medicine*, Amanda Carson Banks examines the history of the birth chair and tells how this birthing device changed over time. Through photographs, artists' renditions of births, interviews, and texts from midwives and early obstetricians, she creates an evolutionary picture of birthing practices and highlights

the radical redefinition of birth that has occurred in the last two centuries. During the 1800s the change from a natural philosophy of birth to a medical one was partly a result of heightened understandings of anatomy and physiology. The medical profession was growing, and with it grew the awareness of the economic rewards of making delivery a specialized practice. In the background of the medical profession's rise was the prevailing perception of women as fragile invalids. Gradually, midwives and birth chairs were relegated to rural and isolated settings. The popularity of birth chairs has seen a revival in the late twentieth century as the struggle between medical obstetrics and the alternative birth movement has grown. As Banks shows through her careful examination of the chairs themselves, these questions have been answered and reconsidered many times in human history. Using the artifacts from the home and medical office, Banks traces sweeping societal changes in the philosophy of how to bring life into the world.

As an Occult Special Investigator, Tess Corday has seen her fair share of disturbing crime scenes--but nothing has ever shocked her as much as the ritualistic murder of a drugged-out runaway kid, who she soon learns was not the first such victim. All the dead teens had traces of the dangerous magical drug called Hex in their bodies. All were the children of powerful mage families. All were killed with the sacred tools of mages. It adds up to the chilling possibility that the OSI is dealing with a serial killer, one who has incredible inhuman powers. To stop the slaughter, Tess and her partner, Derrick, will go anywhere and do anything--including seeking help from the necromancer Lucian Agrado, whom Tess is under orders to avoid. But as the deaths continue, Tess becomes convinced that the identity of the killer is locked inside her own head. And the question is, how many rules is she willing to break to get to the truth?

Landscape is fundamental to human experience. Yet until recently, the study of landscape has been fragmented among the disciplines. This volume focuses on how landscape is represented in language and thought, and what this reveals about the relationships of people to place and to land. Scientists of various disciplines such as anthropologists, geographers, information scientists, linguists, and philosophers address several questions, including: Are there cross-cultural and cross-linguistic variations in the delimitation, classification, and naming of geographic features? Can alternative world-views and conceptualizations of landscape be used to produce culturally-appropriate Geographic Information Systems (GIS)? Topics included: ontology of landscape; landscape terms and concepts; toponyms; spiritual aspects of land and landscape terms; research methods; ethical dimensions of the research; and its potential value to indigenous communities involved in this

type of research.
