Art Models 7 *Modelling and Painting Science Fiction Miniatures*

The New York Times bestseller that gives readers a paradigm-shattering new way to think about motivation from the author of *When: The Scientific Secrets of Perfect Timing* Most people believe that the best way to motivate is with rewards like money—the carrot-and-stick approach. That's a mistake, says Daniel H. Pink (author of *To Sell Is Human: The Surprising Truth About Motivating Others*). In this provocative and persuasive new book, he asserts that the secret to high performance and satisfaction—at work, at school, and at home—is the deeply human need to direct our own lives, to learn and create new things, and to do better by ourselves and our world. Drawing on four decades of scientific research on human motivation, Pink exposes the mismatch between what science knows and what business does—and how that affects every aspect of life. He examines the three elements of true motivation—autonomy, mastery, and purpose—and offers smart and surprising techniques for putting these into action in a unique book that will change how we think and transform how we live.

Whether trying a new technique, getting in some practice time, or working on a finished piece, this figure study enables artists to create their choice of model, pose, and view whenever and wherever they'd like. The latest addition to the series will help artists become proficient in incorporating chiaroscuro or light and dark lighting—a technique used by the great masters to produce drama and depth in their paintings—to define the human form. Additional expressions and body details highlighting challenging areas such as the face, hands, and feet in even greater detail augment the disc. Varieties of body types—ranging from thin to plus-size—and ethnicities are included. Poses have been carefully chosen to illustrate important effects such as foreshortening and perspective changes. With this guide, artists can achieve longer drawing sessions than they could when drawing from a model directly. While viewing from many angles and at their own pace is often impossible for artists in a studio session, it becomes as easy as putting in the disc and opening any photo. A judicious amount of photo retouching is done—not to make the models more glamorous or plastic but to remove distractions that detract from the models' essence. The PC/Mac-compatible DVD-ROM features more than 2,500 high-resolution JPEG photos providing a number of viewing options—on a computer screen, printed out, projected for a group, or via a high-definition television. Each angle of every pose may also be enlarged, enabling artists to zoom in on specific body parts to achieve a higher level of detail.

How artists at the turn of the twentieth century broke with traditional ways of posing the bodies of human figures to reflect modern understandings of human consciousness. With this book, Emmelyn Butterfield-Rosen brings a new formal and conceptual rubric to the study of turn-of-the-century modernism, transforming our understanding of the era's canonical works. Butterfield-Rosen analyzes a hitherto unexamined formal phenomenon in European art: how artists departed from conventions

for posing the human figure that had long been standard. In the decades around 1900, artists working in different countries and across different media began to present human figures in strictly frontal, lateral, and dorsal postures. The effect, both archaic and modern, broke with the centuries-old tradition of rendering bodies in torsion, with poses designed to simulate the human being's physical volume and capacity for autonomous thought and movement. This formal departure destabilized prevailing visual codes for signifying the existence of the inner life of the human subject. Exploring major works by Georges Seurat, Gustav Klimt, and the dancer and choreographer Vaslav Nijinsky—replete with new archival discoveries—Modern Art and the Remaking of Human Disposition combines intensive formal analysis with inquiries into the history of psychology and evolutionary biology. In doing so, it shows how modern understandings of human consciousness and the relation of mind to body were materialized in art through a new vocabulary of postures and poses.

The Great Mental Models, Volume 1 "O'Reilly Media, Inc."

This book defines the wide application of the art of modelling. The main emphasis is on the imaging of dynamic processes which are analysed and subdivided into their atomic constituents by means of systems analysis. The cyclic structure and the stages of models' set-up are explained. The evaluation of a model's quality is regarded as a stochastic process. The aspects of grade used in different fields of sciences are brought into perspective. Thus, a quantitative concept of validity on the basis of conditional degrees of rational belief can be developed.

Models of Integrity examines the relationship between contemporary art and the law through the lens of integrity. In the 1960s, artists began to engage conspicuously with legal ideas, rituals, and documents. The law—a primary institution subject to intense moral and political scrutiny—was a widely recognized source of authority to audiences inside the art world and out. Artists frequently engaged with the law in ways that signaled a recuperation of the integrity that they believed had been compromised by the very institutions entrusted with establishing standards of just conduct. These artists sought to convey the social purpose of an artwork without overstating its political impact and without losing sight of how aesthetic decisions compel audiences to see their everyday world differently. Addressing the role that law plays in enabling artworks to function as social and political forces, this important book fills a gap in the field of law and the humanities, and will serve as a practical "how-to" for contemporary artists.

By uniting key concepts and methods from education, psychology, statistics, econometrics, medicine, language, and forensic science, this textbook provides an interdisciplinary methodological approach to study human learning processes longitudinally. This longitudinal approach can help to acquire a better understanding of learning processes, can inform both future learning and the revision of educational content and formats, and may help to foster self-regulated learning skills. The initial section of this textbook focuses on different types of research questions as well as practice-driven questions that may refer to groups or to individual learners. This is followed by a discussion of different types of outcome variables in educational research and practice, such as pass/fail and other dichotomies, multi-category nominal choices, ordered performance categories, and different types of quantifiable (i.e., interval or ratio level of measurement) variables. For each of these types of outcome variables, single-measurement and repeated-measurements scenarios are offered with clear examples. The book then introduces cross-sectional and longitudinal interdependence of learning-related variables through emerging network-analytic methods and in the final part the learned concepts are applied to different types of studies involving time series. The book concludes with some general guidelines to give direction to future (united) educational research and practice. This textbook is a must-have for all applied researchers, teachers and practitioners interested in (the teaching of) human learning, instructional design, assessment, life-long learning or applications of concepts and methods commonly encountered in fields such as econometrics, psychology, and sociology to educational research and practice.
