Capsules Engineering Colliery Engineer The Colliery Engineer and Metal Miner Journal of the American Society of Mechanical Engineers Practical Engineer The Navy List Engineering Review Engineering News and American Contract Journal Mining and Engineering World Falling Behind? Boom, Bust, and the Global Race for Scientific Talent

Probationary Americans examines contemporary immigration rules and how they affect the make-up of immigrant communities. The authors' key argument is that immigration policies place race and class as important criteria for gaining entry to the United States, and in doing so, alter the makeup of America's immigrant communities.

Pharmaceutical Dosage Forms: Capsules covers the development, composition, and manufacture of capsules. Despite the important role that capsules play in drug delivery and product development, few comprehensive texts on the science and technology of capsules have been available for the research and academic environments. This text addresses this gap, discussing how capsules provide unique capabilities and options for dosage form design and formulation.

Traffic Engineering & Control Princeton University Press

Is the United States falling behind in the global race for scientific and engineering talent? Are U.S. employers facing shortages of the skilled workers that they need to compete in a globalized world?

Such claims from some employers and educators have been widely embraced by mainstream media and political leaders, and have figured prominently in recent policy debates about education, federal expenditures, tax policy, and immigration. Falling Behind? offers careful examinations of the existing evidence and of its use by those involved in these debates. These concerns are by no means a recent phenomenon. Examining historical precedent, Michael Teitelbaum highlights five episodes of alarm about "falling behind" that go back nearly seventy years to the end of World War II. In each of these episodes the political system responded by rapidly expanding the supply of scientists and engineers, but only a few years later political enthusiasm or economic demand waned. Booms turned to busts, leaving many of those who had been encouraged to pursue science and engineering careers facing disheartening career prospects. Their experiences deterred younger and equally talented students from following in their footsteps—thereby sowing the seeds of the next cycle of alarm, boom, and bust. Falling Behind? examines these repeated cycles up to the present, shedding new light on the adequacy of the science and engineering workforce for the current and future needs of the United States.
