in the bartleby Q&A Library Calculus Questions & Answers | bartleby The change in 'y', with respect to 'x' is represented by dy/dx which is usually said as "d-y-d-x". When differentiating a straightforward equation such as $y = x^2$, you simply lower the value of the exponent, or power, by one and multiply by the original value of the exponent. For example, the exponent in the equation $y = x^2$ is '2', decrease this by one and you are left with $dy/dx = x^1$ which can be expressed as just $dy/dx = x$.
