"The goal of this text is to relate the fundamental concepts of general, organic, and biological chemistry to the world around us, and in this way illustrate how chemistry explains many aspects of everyday life. This text is different-by design. Since today's students rely more heavily on visual imagery to learn than ever before, this text uses less prose and more diagrams and figures to reinforce the major themes of chemistry. A key feature is the use of molecular art to illustrate and explain common phenomena we encounter every day. Each topic is broken down into small chunks of information that are more manageable and easily learned. Students are given enough detail to understand basic concepts, such as how soap cleans away dirt and why trans fats are undesirable in the diet, without being overwhelmed. This textbook is written for students who have an interest in nursing, nutrition, environmental science, food science, and a wide variety of other health-related professions. The content of this book is designed for an introductory chemistry course with no chemistry prerequisite, and is suitable for either a two-semester sequence or a one-semester course. I have found that by introducing one new concept at a time, keeping the basic themes in focus, and breaking down complex problems into small pieces, many students in these chemistry courses acquire a new appreciation of both the human body and the larger world around them"--  
*General, Organic, and Biological Chemistry* Cengage Learning

This full-color, comprehensive, affordable manual is appropriate for two-semester introductory chemistry courses. It is loaded with clearly written exercises, critical thinking questions, and full-color illustrations and photographs, providing ample visual support for experiment set up, technique, and results.

This is the eBook of the printed book and may not include any media, website access codes, or print supplements that may come packaged with the bound book. Laboratory Manual for General, Organic, and Biological Chemistry can accompany the lab portion of any one-semester GOB chemistry course. Most experiments include a link to the health sciences, such as nursing and nutrition, while concepts are framed in real-world questions and are broadly applicable. Many of the experiments illustrate concepts from more than one chapter of the text and often utilize basics from the areas of general, organic, or biological chemistry to develop concepts in one or more of the other areas. This integrated strategy helps students to understand that chemistry is not a disparate set of unrelated concepts. Using this integrated approach, students develop the skills to help them understand chemistry and to see its applications in their everyday lives.
