The problems related to the process of industrialisation such as biodiversity depletion, climate change and a worsening of health and living conditions, especially but not only in developing countries, intensify. Therefore, there is an increasing need to search for integrated solutions to make development more sustainable. The United Nations has acknowledged the problem and approved the "2030 Agenda for Sustainable Development". On 1st January 2016, the 17 Sustainable Development Goals (SDGs) of the Agenda officially came into force. These goals cover the three dimensions of sustainable development: economic growth, social inclusion and environmental protection. The Encyclopedia of the UN Sustainable Development Goals comprehensively addresses the SDGs in an integrated way. It encompasses 17 volumes, each one devoted to one of the 17 SDGs. This volume addresses SDG 9, namely "Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation" and contains the description of a range of terms, to allow a better understanding and foster knowledge about it. This book presents a set of papers on the state of the art of knowledge and practices about three important aspects of sustainable development, infrastructure, industrialization and innovation. It focuses on the support of cleaner technologies, enhanced scientific research, domestic technology development and universal internet access. Concretely, the defined targets are: Develop quality, reliable, sustainable and resilient infrastructure, including regional and transborder infrastructure, to support economic development and human well-being, with a focus on affordable and equitable access for all Promote inclusive and sustainable industrialization and, by 2030, significantly raise industry's share of employment and gross domestic product, in line with national circumstances, and double its share in least developed countries Increase the access of small-scale industrial and other enterprises, in particular in developing countries, to financial services, including affordable credit, and their integration into value chains and markets Upgrade infrastructure and retrofit industries to make them sustainable, with increased resource-use efficiency and greater adoption of clean and environmentally sound technologies and industrial processes, with all countries taking action in accordance with their

respective capabilities Enhance scientific research, upgrade the technological capabilities of industrial sectors in all countries, in particular developing countries, including encouraging innovation and substantially increasing the number of research and development workers per 1 million people and public and private research and development spending Facilitate sustainable and resilient infrastructure development in developing countries through enhanced financial, technological and technical support to African countries, least developed countries, landlocked developing countries and small island developing states Support domestic technology development, research and innovation in developing countries, including by ensuring a conducive policy environment for, inter alia, industrial diversification and value addition to commodities Significantly increase access to information and communications technology and strive to provide universal and affordable access to the Internet in least developed countries Editorial Board Oluwabunmi Opeyemi Adejumo, Leah A Dundon, Lizhen Huang, Heather Jones, Haruna Musa Moda Total Construction Management Routledge This book provides a step-by-step guide to technical and operational integrity audits which has become invaluable for senior management and auditors alike. Bronchiectasis is a hot topic in respiratory medicine, attracting an increasing amount of interest from clinicians, scientists, physiotherapists and the pharmaceutical industry. However, there is a lack of knowledge about the disease in terms of the research performed, clinical management, classification and patient treatment. The disease is also very complex because it can be caused by multiple underlying disorders, meaning its clinical presentation is highly diverse. This Monograph will tackle these issues by providing a series of chapters from recognised world experts covering: clinical management, service delivery, pathophysiology, microbiology and underlying disorders. The book also addresses the challenges faced in clinical trials and the need for drug development, and presents a number of clinical cases designed to aid learning. The Bronchiectasis Monograph substantially integrates the 2017 ERS guidelines on management of these patients. It is an essential reference for anyone caring for bronchiectasis patients or engaged in bronchiectasis research.

The revised quality management systems

ISO 9001:2000 was put in place in December 2000. There is huge international interest in the subject, particularly from companies already certified to ISO 9001, ISO 9002 and ISO 9004, needing to update their existing systems to ISO 9001:2000. ISO 9001:2000 Audit Procedures fills a need for a guide which will assist auditors in completing internal, external and third party audits of existing ISO 9001:1994, ISO 9002:1994 and ISO 9003:1994 compliant Quality Management Systems, newly implemented ISO 9001:2000 Quality Management Systems and transitional QMSs. Organizations must also be prepared to undergo an audit of their own quality procedures from potential customers and prove to them that their Quality Management System fully meets the recommendations, requirements and specifications of ISO 9001:2000. ISO 9001:2000 Audit Procedures describes methods for completing management reviews and quality audits. Includes essential information on what is provided in ISO 9001:2000. Provides stage audit check sheets. Provides a crosscheck between the requirements of ISO 9001:2000 and that of any QMS previously certified to ISO 9001:1994.

With the exception of written letters and personal conversations, digital technology forms the basis of nearly every means of communication and information that we use today. It is also used to control the essential elements of economic, scientific, and public and private life: security, production, mobility, media, and healthcare. Without exaggerating it is possible to say that digital technology has become one of the foundations of our technologically oriented civilization. The benefits of modern data technology are so impressive and the potential for future applications so enormous that we cannot fail to promote its development if we are to retain our leading role in the competitive international marketplace. In this process, security plays a vital role in each of the areas of application of digital technology — the more technological sectors are entrusted to data systems technology, the more important their reliability becomes to us. Developing digital systems further while simultaneously ensuring that they always act and respond in the best interests of people is a central goal of the technological research and development propagated and conducted by Fraunhofer. Society of Automotive Engineers CE Marking can be regarded as a product's trade passport for Europe. It is a mandatory European marking for certain product groups to indicate conformity with the essential health and safety requirements set out in the European Directive. The prime aim of the CE Directive is to ensure that "all industrial products that are placed on the market do not compromise the safety and health of users when properly installed, maintained and used in accordance with their intended purpose. Users and third parties should be provided with a high level of protection and the devices should attain the performance levels claimed by the manufacturer." This book explains the

meaning of CE Marking, its history, how the Directive can affect all manufacturers of industrial products, its current status, its associated quality management requirements, and how manufacturers can easily and cost-effectively meet the requirements for CE Conformance. Essential information for any manufacturer or distributor wishing to trade in the European Union Practical and easy to understand

Worldwide, skin cancer is the most diagnosed cancer, with one in three cancers being a skin cancer. For outdoor workers, prolonged sun exposure is an important workplace hazard that can cause skin cancer and heat stress, both of which are largely preventable. However,

outdoor workers are regularly over-exposed to the sun, often exceeding the recognized exposure limits by many times. They are also often not well protected. As implementing effective sun safety measures is challenging, this Guide, along with its supporting resources, will help workplaces better protect their outdoor workers. This Guide provides a step-by-step process to develop a Sun Safety Program that is designed to complement existing safety practices and be embedded within a workplace's occupational health and safety management system.
