This book provides a thorough understanding of the fundamental concepts of financial mathematics essential for the evaluation of any financial

product and instrument. Mastering concepts of present and future values of streams of cash flows under different interest rate environments is core

for actuaries and financial economists. This book covers the body of knowledge required by the Society of Actuaries (SOA) for its Financial

Mathematics (FM) Exam. The third edition includes major changes such as an addition of an 'R Laboratory' section in each chapter, except for Chapter

9. These sections provide R codes to do various computations, which will facilitate students to apply conceptual knowledge. Additionally, key

definitions have been revised and the theme structure has been altered. Students studying undergraduate courses on financial mathematics for

actuaries will find this book useful. This book offers numerous examples and exercises, some of which are adapted from previous SOA FM Exams. It is

also useful for students preparing for the actuarial professional exams through self-study.

MATHEMATICAL EXCURSIONS, Third Edition, teaches students that mathematics is a system of knowing and understanding our surroundings. For

example, sending information across the Internet is better understood when one understands prime numbers; the perils of radioactive waste take on

new meaning when one understands exponential functions; and the efficiency of the flow of traffic through an intersection is more interesting after

seeing the system of traffic lights represented in a mathematical form. Students will learn those facets of mathematics that strengthen their

quantitative understanding and expand the way they know, perceive, and comprehend their world. We hope you enjoy the journey. Important Notice:
