Lab 7 Mitosis and Meiosis.pdf - BSC 108 Lab 7 Mitosis and ... Mitosis is the division of the nucleus and its contents. In mitosis, DNA which has been copied in the S phase of interphase is separated into two individual copies. Each copy will end up in its own cell at the end of M phase. Mitosis has several steps: prophase, prometaphase, metaphase, anaphase, and telophase (Figure 2). The spindle fibers, which are formed by the cell as mitosis progresses, are used to attach to chromosomes, align them down the middle of the cell, and pull chromosomes ...
