TOGAF® 9 Certified Study Guide Springer

This volume constitutes the proceedings of the 7th IFIP WG 8.1 Conference on the Practice of Enterprise Modeling held in November 2014 in Manchester, UK. The focus of the PoEM conference series is on advances in the practice of enterprise modeling through a forum for sharing knowledge and experiences between the academic community and practitioners from industry and the public sector. The 16 full and four short papers accepted were carefully reviewed and selected from 39 submissions. They reflect different topics of enterprise modeling including business process modeling, enterprise architecture, investigation of enterprise modeling methods, requirements engineering, and specific aspects of enterprise modeling.

Why, What, How Springer

This textbook provides a hands-on introduction to enterprise architecture management. It guides the reader through the applications of methods and tools to typical business problems by presenting enterprise architecture frameworks and by sharing experiences from industry. The structure of the book represents the typical stages of the journey of an enterprise architect. Chapter 1 addresses the central question of what to achieve with the introduction of an enterprise architecture. Chapter 2 then introduces concepts and visualizations for business architecture that help with

understanding the business. In chapter 3 the development of an application architecture is outlined, which provides transparency on information systems and their business context. Next, chapter 4 presents visual tools to analyze, improve and eventually optimize the application landscape. Chapter 5 discusses both traditional organizational as well as collaborative approaches to enterprise architecture management. Eventually, several established enterprise architecture frameworks like TOGAF, Zachmann, ArchiMate, and IAF are described in chapter 6. The book concludes with a summary and an outlook on future research potential in chapter 7. Based on their experiences through several years of teaching, the authors introduce students step-by-step to enterprise architecture development and management. Their book is intended as a guide for master classes at universities and includes lots of exercises and references for further reading.

The TOGAF 9 certification program is a knowledge-based certification program. It has two levels, leading to certification for TOGAF 9 Foundation and TOGAF 9 Certified, respectively. The purpose of certification to TOGAF 9 Certified is to provide validation that, in addition to the knowledge and comprehension of TOGAF 9 Foundation level, the Candidate is able to analyze and apply this knowledge. The learning objectives at this level therefore focus on application and analysis in addition to knowledge and comprehension. This Study Guide supports students in preparation for the TOGAF 9 Part 2 Examination, leading to TOGAF 9 Certified.

Enterprise-architectuur wint steeds meer aan belang. Het is niet alleen de toenemende complexiteit in IT en de almaar groeiende behoefte aan informatie, maar ook de complexere manieren van zaken doen die organisaties noopt om op samenhang te sturen. In steeds meer organisaties zijn dan ook architecten werkzaam, niet alleen in de IT, maar ook in de business. Langzamerhand wordt het vakgebied enterprise-architectuur volwassen. Eén van de verschijnselen is het ontstaan van aanpakken, methoden en talen om enterprise-architectuur te classificeren, te beschrijven en te implementeren. De praktijk wijst uit dat het niet gemakkelijk is om de meest geschikte aanpak of methode te kiezen. Aanpakken en methoden zijn niet vergelijkbaar en eerder complementair dan elkaar uitsluitend. Het lijkt alsof je appels en peren vergelijkt. Daarnaast is iedere organisatie weer anders en hangt het van de manier en volwassenheid van het bedrijven van enterprise-architectuur af, welke methode daar het beste bij past. Dit alles maakt het kiezen van dé enterprise-architectuurmethode voor een organisatie tot een hachelijke aangelegenheid.

The Integrated Architecture Framework Explained Van Haren

The ArchiMate(R) Specification, a standard of The Open Group, defines an open and independent modeling language for Enterprise Architecture that is supported by different tool vendors and consulting firms. The ArchiMate language enables Enterprise Architects to describe, analyze, and visualize the relationships among business domains in an unambiguous way. This book is the official specification of the ArchiMate 3.1 modeling language from The Open Group. This edition of the standard includes a number of corrections, clarifications, and improvements to the previous edition, as well as several additions. The main changes between Version 3.0.1 and Version 3.1 of the ArchiMate Specification are listed below. In addition to these changes, various other minor improvements in definitions and other wording have been made: □Introduced a new strategy element: value stream □Added an optional directed notation for the association relationship □Improved the organization of the metamodel and associated figures □Further improved and formalized the derivation of relationships The intended audience is threefold: 1. Enterprise Architecture practitioners, such as architects (e.g., business, application, information, process, infrastructure, and, obviously, enterprise architects), senior and operational management, project leaders, and anyone committed to work within the reference framework defined by the Enterprise Architecture. 2. Those who intend to implement the ArchiMate language in a software tool; they will find a complete and detailed description of the language in this book. - The academic community, on which we rely for amending and improving the language, based on state-of-the-art research results in the Enterprise Architecture field.

ArchiMate 1. 0 Specification R&A

The ArchiMate® Specification, an Open Group Standard, defines an open and independent modeling language for Enterprise Architecture that is supported by different tool vendors and consulting firms.
