Concussions and the Marketing of Sports Equipment NFHS
 In this inspirational yet practical book, the man Parade called "the most important coach in America," subject of the national bestseller *Season of Life*, Joe Ehrmann, describes his coaching philosophy and explains how sports can transform lives at every level of play, from the earliest years to professional sports. Coaches have a tremendous platform, says Joe Ehrmann, a former Syracuse University All-American and NFL star. Perhaps second only to parents, coaches can impact young people as no one else can. But most coaches fail to do the teaching, mentoring, even life-saving intervention that their platform provides. Too many are transactional coaches; they focus solely on winning and meeting their personal needs. Some coaches, however, use their platform. They teach the Xs and Os, but also teach the Ys of life. They help young people grow into responsible adults; they leave a lasting legacy. These are the transformational coaches. These coaches change lives, and they also change society by helping to develop healthy men and women. In *SideOut Coaching* explains how to become a transformational coach. Coaches first have to "go inside" and articulate their reasons for coaching. Only those who have taken the *InSideOut* journey can become transformational. Joe Ehrmann provides examples of coaches in his life who took this journey and taught him how to find something bigger than himself in sports. He describes his own *InSideOut* experience, starting with the death of his beloved brother, which helped him understand how sports could transcend the playing field. He gives coaches the information and the tools they need to become transformational. Joe Ehrmann has taken his message about the extraordinary power of sports all over the country. It has been warmly endorsed by NFL head coaches, athletic directors at major universities, high school head coaches, even business groups and community organizations. Now any parent-coach or school or community coach can read Ehrmann's message and learn how to make sports a life-changing experience.

In part III, the role of sport programs and player development, from youth to intercollegiate, as well as the crucial role of sport coach and its many responsibilities. Sports Crazy: How Sports Are Sabotaging American Schools exposes the excesses of middle and high school sports and the detrimental effects our sports obsession has on American education. Institutions are increasingly emulating college and professional sports models and losing sight of a host of educational and health goals. Steven J. Overman describes how this agenda is driven largely by partisan fans and parents of athletes who exert an inordinate influence on school priorities, and he explains how and why school administrators shockingly and consistently capitulate to these demands. The author underscores the incongruity of public schools involved in an entertainment business and the effects this diversion has on academic integrity, learning, life experience, and overall educational outcomes. Overman examines out-of-control school sports within the context of a school's educational mission and curriculum, with telling reference to impacts on physical education. He explores as well the outsized place of interscholastic sports beyond the classroom and scrutinizes the distorted relationship between intramural or recreational sports and elitist, varsity athletics. Overman's chapter on tackle football explains many reasons why this sport should be eliminated from the school extracurriculum and replaced by flag or touch football. Overman presents a brief history of interscholastic sports, and he compares and contrasts the American experience of school-sponsored sport to the European model of community-based clubs. Which approach better serves students? Overman recommends reforms in the context of a radical proposal to phase out interscholastic sports in favor of an intramural or club model. This approach would alleviate such problems as elitism and gender bias and reign in hypercompetitiveness while freeing schools to educate students rather than provide public entertainment.

Unlike the generations of coaches that have gone before them,

today's coaches are expected not only to teach motor skills to young athletes but to do so in an environment that is conducive to the ethical, emotional, social and physical well-being of each one of them. Each of the 15 chapters of this book presents, and then systematically debunks, the most pervasive, persistent and potentially harmful myths in coaching, including such chestnuts as "play by my rules," "winning is the ultimate goal" and "there's no I in 'team.'" Although the information in every chapter is based on current scientific evidence (and there are numerous source notes), each is written in the everyday language of coaches and covers topics that are of particular interest to coaches, parents, athletic administrators, recreation programming specialists--and even the occasional fan.

Young children and even infants work hard at mastering various kills and show spontaneous pleasure at their own accomplishment. John Nicholls explores the conditions that cause students to lose their unselfconscious involvement in a game or task and become concerned with how they are stacking up against others. Charting the development of children's concepts of luck, effort, and ability, he argues that with age they are increasingly prone to take superiority over others as the definition of success. An emphasis on interpersonal competition, which permeates Western society, exacerbates this egotistical tendency and results in diminished accomplishment and alienation from school. To overcome these problems, Nicholls argues, we must "become as little children" for whom absorption in exploration and accomplishment come naturally, even when those around them are more competent. This ideal is unlikely to be promoted through technical approaches to education, or by the current emphasis on the role of education in economic development. Instead, Nicholls calls for a progressive approach to education. Difficult though it is to implement, this approach is most likely to increase equality of motivation for intellectual development, substantial accomplishment, satisfaction in work, and more productive relations with others. These are important ideas for anyone interested in achievement motivation, for those professionally involved in education, and for nonspecialists interested in, or worried about, how we educate our children.

Officiating Track and Field and Cross Country Simon and Schuster School-aged children in the U.S. and other Western nations spend almost half of their waking hours in leisure activities. For some, out-of-school time is perceived as inconsequential or even counterproductive to the health and well-being of young persons. Recently, however, there has been a growing recognition that--along with family, peers, and school--the organized activities in which some youth participate during these hours are important contexts of emotional, social, and civic development. They provide opportunities for young persons to learn and develop competencies that are largely neglected by schools. At the same time, communities and national governments are now channeling considerable resources into creating organized activities for young people's out-of-school time. This volume brings together a multidisciplinary, international group of experts to provide conceptual, empirical, and policy-relevant advances in research on children's and adolescents' participation in the developmental contexts represented by extracurricular activities, and after-school and community programs. *Organized Activities as Contexts of Development* provides a handbook-like coverage of research in this new emerging field. It considers a broad developmental time-span from middle childhood through early adulthood, providing information on how motivation, participation, and developmental experiences change as youth get older. The contents cover one of the most salient topics in child and adolescent research, education, and social policy, placing consistent emphasis on developmental aspects and implications of organized activity participation for young persons. Representing contributors from several fields of study--psychology, criminal justice, leisure science, sociology, human development, education, prevention, and public policy--the book is designed to appeal to students and scholars in all these areas. Additionally, the volume is written to be of interest to professionals who administer programs and develop policy on youth.

Introduction to Coaching Sports Page Publishing Inc

In the past decade, few subjects at the intersection of medicine and sports have generated as much public interest as sports-related concussions - especially among youth. Despite growing awareness of sports-related concussions and campaigns to educate athletes, coaches, physicians, and parents of young athletes about concussion recognition and management, confusion and controversy persist in many areas. Currently, diagnosis is based primarily on the symptoms reported by the individual rather than on objective diagnostic markers, and there is little empirical evidence for the optimal degree and duration of physical rest needed to promote recovery or the best timing and approach for returning to full physical activity. *Sports-Related Concussions in Youth: Improving the Science, Changing the Culture* reviews the science of sports-related concussions in youth from elementary school through young adulthood, as well as in military personnel and their dependents. This report recommends actions that can be taken by a range of audiences - including research funding agencies, legislatures, state and school superintendents and athletic directors, military organizations, and equipment manufacturers, as well as youth who participate in sports and their parents - to improve what is known about concussions and to reduce their occurrence. *Sports-Related Concussions in Youth* finds that while some studies provide useful information, much remains unknown about the extent of concussions in youth; how to diagnose, manage, and prevent concussions; and the short- and long-term consequences of concussions as well as repetitive head impacts that do not result in concussion symptoms. The culture of sports negatively influences athletes' self-reporting of concussion symptoms and their adherence to return-to-play guidance. Athletes, their teammates, and, in some cases, coaches and parents may not fully appreciate the health threats posed by concussions. Similarly, military recruits are immersed in a culture that includes devotion to duty and service before self, and the critical nature of concussions may often go unheeded. According to *Sports-Related Concussions in Youth*, if the youth sports community can adopt the belief that concussions are serious injuries and emphasize care for players with concussions until they are fully recovered, then the culture in which these athletes perform and compete will become much safer. Improving understanding of the extent, causes, effects, and prevention of sports-related concussions is vitally important for the health and well-being of youth athletes. The findings and recommendations in this report set a direction for research to reach this goal.

Numerous coaching books cover the skills and drills of basketball, but very few hit on the tactical skills of the game--the situational decisions players and coaches make that often determine the outcome of games. That's where *Coaching Basketball Technical and Tactical Skills*, an American Sport Education Program (ASEP) publication, stands out. Written by Kathy McGee, the winningest high school girls' basketball coach in Michigan, in consultation with USA Basketball's Don Showalter, this book will prepare you to be a better teacher and tactician of the game whether you coach men's or women's basketball. Technical skills (such as dribbling, shooting, and rebounding) are examined in depth, as are the tactical skills (such as the give-and-go, backdoor cut, and trapping). More than 195 photos and illustrations bring the basic to intermediate skills to life, while sample season and practice plans will help you in your preparation. You'll find quick tips on how to detect and correct errors in both male and female athletes, cues they need to be aware of in various tactical situations, and key information they need in order to make the appropriate on-court decisions. Produced by ASEP and endorsed by the Women's Basketball Coaches Association (WBCA), this book serves as a resource for the *Coaching Basketball Technical and Tactical Skills* online course, a part of ASEP's Bronze Level Professional Coaches Education Program. Numerous state high school associations, colleges and universities, national sport organizations, and national governing bodies of Olympic sports use the Bronze Level in whole or in part to qualify coaches. The Bronze Level prepares coaches for all aspects of coaching and is a recognized and respected credential for all who earn it.
