RACHAEL PORTER

An Integrated Approach to Its Nature and Treatment Plural
 Publishing
 Bringing together the expertise of leading research practitioners in the field, the second edition of *Clinical Management of Sensorimotor Speech Disorders* is an up-to-date reference for the underlying theory and the basic principles of assessment and treatment. This book provides a solid foundation in the conceptual framework essential for classifying and differentiating disorders according to clinical categories. It covers the theory underlying measurement strategies including acoustic, kinematic, aerodynamic, and electromyographic techniques, and guides the reader through treatments for each disorder. New in this edition is a comprehensive section with in-depth coverage of the diseases, syndromes, and pathologic conditions which are accompanied by sensorimotor speech disorders. These chapters provide concise descriptions of the disease and its signs and symptoms, neuropathology, epidemiology, and etiology. Each chapter goes on to present the speech impairment associated

with the disorder and its signs and symptoms, etiology, neuropathology, associated cognitive, linguistic, and communicative signs and symptoms, special diagnostic considerations, treatment, and key references. Features: Clear articulation of theoretical issues provides a strong foundation for the clinical management of the dysarthrias, apraxia, and speech problems secondary to hearing loss New chapter on neurogenic fluency disorders Extensive discussion of neuropathologic conditions that cause sensorimotor speech disorders Authoritative and comprehensive, this expanded edition will prove to be the reference of choice for students in speech-language pathology programs as well as clinicians and researchers.

Dysarthria Springer

Stuttering: An Integrated Approach to Its Nature presents the most comprehensive textbook on the topic today, providing an overview of the etiology and development of stuttering and details, appropriate approaches to accurate assessment and treatment. Exploring a variety of practice settings, this core introductory book grounds all topics in a firm basis of the disorder's origin and nature. This edition has been thoroughly updated to address all current methodologies.

Essays for Ray Kent ScholarlyEditions

Ce test se veut un outil clinique profitant aux professionnels rattachés à l'audiologie pédiatrique pour les enfants ayant une déficience intellectuelle.

Assessment in Speech and Language Therapy Thieme

This open access book focuses on practical clinical problems that are frequently encountered in stroke rehabilitation.

Consequences of diseases, e.g. impairments and activity limitations, are addressed in rehabilitation with the overall goal to reduce disability and promote participation. Based on the available best external evidence, clinical pathways are described for stroke rehabilitation bridging the gap between clinical evidence and clinical decision-making. The clinical pathways answer the questions which rehabilitation treatment options are beneficial to overcome specific impairment constellations and activity limitations and are well acceptable to stroke survivors, as well as when and in which settings to provide rehabilitation over the course of recovery post stroke. Each chapter starts with a description of the clinical problem encountered. This is followed by a systematic, but concise review of the evidence (RCTs, systematic reviews and meta-analyses) that is relevant for clinical decision-making, and comments on assessment, therapy (training, technology, medication), and the use of technical aids as appropriate. Based on these summaries, clinical algorithms / pathways are provided and the main clinical-decision situations are portrayed. The book is invaluable for all neurorehabilitation team members, clinicians, nurses, and therapists in neurology, physical medicine and rehabilitation, and related fields. It is a World Federation for NeuroRehabilitation (WFNR) educational initiative, bridging the gap between the rapidly expanding clinical research in stroke rehabilitation and clinical practice across societies and continents. It can be used for both clinical decision-making for individuals and as well as clinical background knowledge for stroke rehabilitation service development initiatives.

Clinical Management of Sensorimotor Speech Disorders

Springer Nature

Presents a comprehensive, multidimensional approach to feeding problems. Ms. Wolf and Ms. Glass assist the feeding specialist in acquiring the knowledge and skills to take an active and effective part in the process of assessment and management of infant feeding. James F. Bosma, M.D., says, "This unique book describes the insights and skills in evaluation and care of dysphagic infants that are being demonstrated by a growing number of occupational, physical, and speech therapists and nurses." Book jacket.

SPELT-3 Frenchay Dysarthria Assessment

A landmark text presenting a new and revolutionary model of music in rehabilitation, therapy and medicine that is scientifically validated and clinically tested. Each of the 20 clinical techniques is described in detail with specific exercises, richly illustrated and with background information regarding research and clinical diagnoses.

Introducing Objective Acoustic Metrics for the Frenchay

Dysarthria Assessment Procedure Cambridge University Press

The care of stroke patients has changed dramatically. As well as improvements in the emergency care of the condition, there have been marked advances in our understanding, management and rehabilitation of residual deficits. This book is about the care of stroke patients, focusing on behavioural and cognitive problems. It provides a comprehensive review of the field covering the diagnostic value of these conditions, in the acute and later phases, their requirements in terms of treatment and management and the likelihood and significance of long-term disability. This book will appeal to all clinicians involved in the

care of stroke patients, as well as to neuropsychologists, other rehabilitation therapists and research scientists investigating the underlying neuroscience.

Articulation Disorders—Advances in Research and Treatment:

2012 Edition is a ScholarlyPaper™ that delivers timely, authoritative, and intensively focused information about Articulation Disorders in a compact format. The editors have built Articulation Disorders—Advances in Research and Treatment: 2012 Edition on the vast information databases of ScholarlyNews.™ You can expect the information about Articulation Disorders in this eBook to be deeper than what you can access anywhere else, as well as consistently reliable, authoritative, informed, and relevant. The content of Articulation Disorders—Advances in Research and Treatment: 2012 Edition has been produced by the world's leading scientists, engineers, analysts, research institutions, and companies. All of the content is from peer-reviewed sources, and all of it is written, assembled, and edited by the editors at ScholarlyEditions™ and available exclusively from us. You now have a source you can cite with authority, confidence, and credibility. More information is available at <http://www.ScholarlyEditions.com/>.

Assessment of Communication Disorders in Adults, Second Edition Pro Ed

This volume of Advances in Intelligent and Soft Computing contains accepted papers presented at SOCO 2011 held in the beautiful and historic city of Salamanca, Spain, April 2011. This volume presents the papers accepted for the 2011 edition, both for the main event and the Special Sessions. SOCO 2011 Special Sessions are a very useful tool in order to complement the regular program with new or emerging topics of particular interest to the participating community. Four special sessions were organized related to relevant topics as: Optimization and Control in Industry, Speech Processing and Soft Computing, Systems, Man & Cybernetics and Soft Computing for Medical Applications.

The Management of Motor Neurone Disease Nelson Thornes

"The SPELT- 3 measures the 4-0 to 9-11 year old child's generation of specific morphological and syntactical structures. It elicits responses from the child in a contextual setting through visual and auditory stimuli."--P. 2.

A Handbook of Neuropsychological Assessment Routledge

Originally published in 1992, this is a wide-ranging text concerned with the principles and practice of neuropsychological assessment in adults. It combines a flexible hypothesis testing approach to assessment with information on specialised test batteries. The book covers the major areas of memory, language, perception, attention, and executive dysfunctions, and includes chapters on dementia, alcohol, drug and toxic conditions, stroke and closed head injury. Assessment of dysfunction in cases involving claims for compensation and chapters on specialised assessment techniques, including automated test procedures, are provided. The book presents a sound introduction to this complex area and gives guidelines for the clinician who may need concise information on a specialised topic.

The Cambridge Handbook of Communication Disorders

Plural Publishing

What assessment tests are available to speech therapists? How are they best used? Originally published in 1993, Assessment in Speech and Language Therapy was designed to guide speech therapists in choosing the most appropriate assessments for evaluation, monitoring and intervention at the time. By providing guidance on defining the issues in assessment, it shows how to make sure that the process will produce a result relevant to the therapist's own needs and those of his or her clients. The major

issues involved are discussed in detail, in particular how to make sure that assessments are relevant to individual needs. This title will be invaluable to all speech therapists and clinical psychologists working in this area.

Soft Computing Models in Industrial and Environmental Applications, 6th International Conference SOCO 2011

Psychological Corporation

This is a collection of 48 highly useful case studies of children and adults with communication disorders.

ScholarlyPaper Logos Verlag Berlin GmbH

The analysis of speech of people with Parkinson's disease is an interesting and highly relevant topic that has attracted the research community during several years. The advances in digital signal processing and pattern recognition have motivated the research community to work on the development of computational tools to perform automatic analysis of speech. Most of the contributions on this topic are focused on sustained phonation of vowels and only consider recordings of one language. This thesis addresses two problems considering recordings of sustained phonations of vowels and continuous speech signals: (1) the automatic classification of Parkinson's patients vs. healthy speakers, and (2) the prediction of the neurological state of the patients according to the motor section of the Unified Parkinson's Disease Rating Scale (UPDRS). Recordings of three languages are considered: Spanish, German, and Czech. German and Czech data were provided by other researchers, and Spanish data were recorded in Medellin, Colombia, during the development of this work. Besides the classical approaches to assess pathological speech, a new method to model articulation deficits of Parkinson's patients is proposed. This new articulation modeling approach shows to be more accurate and robust than others to discriminate between Parkinson's patients and healthy speakers in the three considered languages.

Case Studies in Communication Disorders National Academies Press

This collection showcases the state of the art in motor speech disorders. Leading names in the field review the history, current practice and future trends, neural models, acoustics and measurement, speech technology, and treatment approaches. Chapters are carefully constructed and include key points, summaries, references, and supplemental reading.

Clinical Pathways in Stroke Rehabilitation Cambridge University Press

Test standardisé, développé à l'hôpital Frenchay de Bristol en Angleterre, conçu pour les orthophonistes afin de diagnostiquer une dysarthrie.

Feeding and Swallowing Disorders in Infancy Springer Science & Business Media

This volume offers almost 200 detailed entries covering the entire range of communication and speech disorders in children and adults, from basic science to clinical diagnosis. It is divided into four sections that reflect the standard categories with the field: voice, speech, language and hearing.

A Physiological Approach to Assessment and Treatment Austin, Tex. : Pro-Ed

This dictionary, sponsored by the International Neuropsychological Society, is a practical resource for neuropsychologists, neurologists, speech pathologists, psychiatrists, clinical psychologists, and occupational therapists

whose work or research involves patients with nervous system disorders. It will also be valuable for students of neuropsychology and related disciplines. The book provides concise definitions of neurobehavioral abnormalities, diseases affecting the nervous system, clinical syndromes, neuropsychological tests, rehabilitation methods, medical procedures, basic neuroscience and other important terms. Its broad scope not only encompasses the approaches, perspectives, and practice settings of neuropsychology, but also extends to the related disciplines of neuroanatomy, neurochemistry, neurophysiology, neurology, neuropsychiatry, and experimental and cognitive psychology. In addition to definitions, the dictionary includes other relevant information: abbreviations and acronyms that appear in medical charts and in clinical literature, the terms' origins to illustrate how concepts developed, and biographical information on figures who have influenced the understanding of syndromes, diseases, and anatomy.

Functional Assessment for Adults with Disabilities

Lippincott Williams & Wilkins

Although speech-language pathologists are expected to be able to administer and interpret oral examinations, there are currently no screening tests available that provide careful administration instructions and data for intra-examiner and inter-examiner reliability. The Oral Speech Mechanism Screening Examination (OSMSE) is designed primarily for use by clinical speech-language pathologists. The examination could also serve, however, as a useful tool for oral myofunctional therapists, as well as physical therapists, dentists, and orthodontists interested specifically in speech. It is reliable, relatively easy and quick to administer, and appropriate for children and adults in either diagnostic or therapy settings. The OSMSE is intended to assess those anatomical structures and physiological functions that are most often considered to be potentially related to speech or language disorders. Structural and/or functional judgments included are organized on the OSMSE test form under categories of: lips, tongue, jaw, teeth, hard palate, soft palate, pharynx, breathing, and diadochokinesis. Results of a preliminary study with normal speaking subjects indicated that the OSMSE had satisfactory intra- and inter-examiner reliability after minimal training. The time required to administer the examination typically ranged from 5 to 10 minutes. (Author/GK)

Springer Nature

Many children and adults experience impairment of their communication skills. These communication disorders impact adversely on all aspects of these individuals' lives. In thirty dedicated chapters, *The Cambridge Handbook of Communication Disorders* examines the full range of developmental and acquired communication disorders and provides the most up-to-date and comprehensive guide to the epidemiology, aetiology and clinical features of these disorders. The volume also examines how these disorders are assessed and treated by speech and language therapists and addresses recent theoretical developments in the field. The handbook goes beyond well-known communication disorders to include populations such as children with emotional disturbance, adults with non-Alzheimer dementias and people with personality disorders. Each chapter describes in accessible terms the most recent thinking and research in communication disorders. The volume is an ideal guide for academic researchers, graduate students and professionals in speech and language therapy.
