Emergency Medical Services Pearson

Cardiac arrest can strike a seemingly healthy individual of any age, race, ethnicity, or gender at any time in any location, often without warning. Cardiac arrest is the third leading cause of death in the United States, following cancer and heart disease. Four out of five cardiac arrests occur in the home, and more than 90 percent of individuals with cardiac arrest die before reaching the hospital. First and foremost, cardiac arrest treatment is a community issue - local resources and personnel must provide appropriate, high-quality

care to save the life of a community member. Time between onset of arrest and provision of care is fundamental, and shortening this time is one of the best ways to reduce the risk of death and disability from cardiac arrest. Specific actions can be implemented now to decrease this time, and recent advances in science could lead to new discoveries in the causes of, and treatments for, cardiac arrest. However, specific barriers must first be addressed. Strategies to Improve Cardiac Arrest Survival examines the complete system of response to cardiac arrest in the United States and identifies opportunities within existing and new treatments, strategies, and research that promise to improve the survival and recovery of patients. The recommendations of Strategies to Improve Cardiac Arrest Survival provide high-priority actions to advance the field as a whole. This report will help citizens, government agencies, and private industry to improve health outcomes from sudden cardiac arrest across the United States.

On the streets of New York City, EMTs and paramedics do more than respond to emergencies; they eat and drink together, look out for each other's safety, mercilessly make fun of one another, date one other, and, most crucially, share terrifying experiences and grave injustices suffered under the city's long-broken EMS system. Their loyalty to one another is fierce and absolute. As Jennifer Murphy shows in the

gripping and moving First Responder, they are a family. A dysfunctional family, perhaps, but what family isn't? Many in the field of pre-hospital emergency care have endured medical trauma and familial hardship themselves. Some are looking to give back. Some are desperate for family. Some were inspired by 9/11. Still others want to become doctors, nurses, firefighters, cops, and want to cut their teeth on the streets. As rescuers, they never want people to die or get hurt. But if they are going to die or get hurt, first responders want to be there. Despite the vital role they play New York City, EMTs are paid less than trash collectors,

and far less than any other first responder makes, even though the burden of medical emergencies fall on the backs of EMTs and medics. Yet for Jennifer and her brothers and sisters, it's a calling more than a job. First responders are constantly exposed to infectious diseases, violence, and death. The coronavirus pandemic did not change that math; the public is just more aware of it. After 9/11, EMT training schools experienced a surge in applications from civilians wanting to become first responders, inspired by rescuers who responded to the terrorist attacks and rushed into the burning towers when everyone else ran out.

The same will almost certainly be true post-coronavirus as people are moved by a desire to help in times of crisis in a more direct way. Funny and heartwarming, inspiring and poignant, First Responder follows Jennifer's journey to becoming an EMT and working during and beyond the Covid-19 pandemic. She will bring readers inside an intense world filled with crisis, rescue, grief, uncertainty, and dark humor. First Responder will move readers to a greater understanding and appreciation of those fighting for them—wherever they live—in a world they hardly know or could imagine.
