Mechanics can be further divided in 2 main branches one is 'Static' and other is 'Dynamic'. Static: It deals with the system of forces acting on bodies at rest. Dynamic: It deals with the effect of forces on bodies in motion. Dynamic is divided in branches Kinetics and kinematics-Kinetics: It is the branch of dynamics which studies motion considering mass of body and force causing motion.

Basics of Mechanical Engineering

Classical mechanics is a physical theory describing the motion of macroscopic objects, from projectiles to parts of machinery, and astronomical objects, such as spacecraft, planets, stars and galaxies.

For objects governed by classical mechanics, if the present state is known, it is possible to predict how it will move in the future (determinism) and how it has moved in the past (reversibility).
