This atlas is dedicated specifically to gynecologic frozen section diagnosis and addresses professional practice gaps such as high diagnostic error rate, slow turnaround time, and inefficient communication between surgeons and pathologists at the time of intraoperative frozen section consultation of gynecologic specimens. The format of the volume is a combination of concise

text and high quality gross and frozen section microscopic images, meticulously selected from the superb collection of pathology specimens of gynecologic tumors provided at Yale-New Haven Hospital in the past decades. Frequent entities with diagnostic pitfalls are balanced with less common lesions. Strategies to recognize their diagnostic features are emphasized, in addition to the impact on optimal surgical treatment of patients with gynecologic cancer. The indications, limitations, morphologic diagnostic criteria and pitfalls of frozen section consultation in gynecologic pathology are thoroughly reviewed with an ultimate goal of avoiding patient

mismanagement in real-time. High quality frozen section microscopic illustrations aid the recognition of morphologic patterns and serve as quick reference during intraoperative consultation. Written by experts in the field, Atlas of Intraoperative Frozen Section Diagnosis in Gynecologic Pathology is a valuable resource for pathologists at all career/expertise levels who are involved in intraoperative consultation in their daily clinical practice.

Diagnostic Gynecologic and Obstetric Pathology Springer

In covering the topic of gynecologic and obstetric pathology, this book attempts to carve out its own niche midway between an atlas and a traditional textbook. The gross and microscopic images in this atlas are presented exclusively in color, and are supplemented by pertinent clinical information and discussions of differential diagnostic considerations.

When deemed appropriate, images of immunohistochemical and special stains are included. To further enhance their visual appeal and the overall learning experience, many images in this book are presented with annotations and/or in composite form, and selected images have been enlarged. This image-intensive textbook also includes numerous Pap smear images and cytologic-histologic correlations. In addition to coverage of pathology of the organs of the female genital tract, brief overviews of the normal histology of these sites are provided as necessary background information. Separate chapters are also devoted to placental and peritoneal pathology. There is an emphasis on diagnostic-related issues pertaining to common lesions and their

variants, although classic forms of rare lesions are also presented. In selected instances, recommendations on the processing of gross pathology specimens, discussions regarding the optimal approach for intraoperative consultations, and recommendations on the phrasing of key portions of pathology reports are provided. The 10 chapters of this book are organized by site, and the beginning of each chapter lists the entities discussed and their corresponding page numbers.
