"It is rare for any research methodology book to cover so much ground, and contain so many different kinds of resources between two covers." *Journal of Education for Teaching* "As a guide for new and inexperienced researchers, it is second to none." *British Journal of Educational Studies* *Doing Early Childhood Research* demystifies the research process. An international team of experienced researchers shows how to select methods which are appropriate for working with young children in early childhood settings or at home. They provide a thorough introduction to the most common research methods used in the early childhood context. Reflecting the multidisciplinary nature of much early childhood research, they cover a wide range of conventional and newer methods including observation, small surveys, interviews with adults and children, action research, ethnography and quasi-experimental approaches. They explain clearly how to set up research projects which are theoretically grounded, well-designed, rigorously analysed, feasible and ethically based. Each chapter is illustrated with examples. Widely used by early childhood researchers in many countries, this second edition of *Doing Early Childhood Research* has been fully revised. It includes new chapters on beginning research, mixed methods research, interviewing children, and working with Indigenous children, and

also new case study chapters. It is essential reading for novice, initial career and experienced researchers. In a time of unprecedented economic uncertainty, this book provides empirical guidance to the economy and what to expect in the near and distant future. Beginning with a historic look at major contributions to economic indicators and business cycles starting with Wesley Clair Mitchell (1913) to Burns and Mitchell (1946), to Moore (1961) and Zarnowitz (1992), this book explores time series forecasting and economic cycles, which are currently maintained and enhanced by The Conference Board. Given their highly statistically significant relationship with GDP and the

unemployment rate, these relationships are particularly useful for practitioners to help predict business cycles.

The rapid growth of world trade has become one of the most phenomenal features of the international order after the World War. While different countries were experiencing various growth rates of their economies, most of them found out that foreign trade grew much faster than their economies. As a matter of fact, for most economies, foreign trade has been determined to be one of the biggest and the most consistent contributors to economic growth. Nowadays world trade is a very complicated phenomenon because it is not just an economic but also a social, political, environmental, labour, and legal matter. Economists care about world trade because economies are getting more and more open and world trade is related to the properties of open economies. Government planners care about world trade because it is related to many issues that the economies are facing: Resource allocation, income distribution, employment, production, consumption, government revenue, economic growth, and economic welfare. A right trade policy will enhance the economic welfare and growth of the economy in a more harmonious and equitable way. A wrong policy, however, could spell disaster.
