## ADRIENNE CHANEL

Review of Ophthalmology E-Book Mosby  
 Since the last Edition of Ophthalmology Examinations Review, there has been major new discovery in the understanding of common eye diseases, and new treatments and diagnostic procedures have been refined or newly developed. A revised Edition reflecting these changes is warranted at this time. The aim and scope of the book will be consistent with the previous two editions in that it will provide a broad review for the final year ophthalmology resident and trainees taking the specialist ophthalmology examinations. The book deals primarily with key facts and topics that are important from an examination

perspective. Only information and facts that are considered relevant and critical to the exams are covered, with topics that may be of scientific interest, but are not common to exams specifically left out. This book will help the resident organize and synthesize knowledge acquired from various other sources or textbooks. While not meant to replace standard textbooks, enough information is contained within the book to serve as the main revision text nearer the exams. The style and format of this book is intentionally didactic, with questions and short answers. The answer includes a 'model opening statement,' followed by a classification system to aid organization of facts and then by the bulk of the answer in concise short notes. Exam Tips are inserted to provide an insight into how to answer different types of questions and when appropriate, a Clinical Approach section is also included. In the new edition,

topics such as new understanding of disease mechanisms, new investigations (e.g. OCT), and new procedures and treatment (e.g. use of anti-vascular endothelial growth factors, new refractive surgical techniques, new corneal transplant) are covered.

Now in its fourth edition, this best-selling book is fully updated to address the ever increasing demands on healthcare professionals to deliver high-quality patient care. A multitude of factors impinge on healthcare delivery today, including an ageing population, more sophisticated medicines, high patient expectation and changing health service infrastructure. Time demands on primary care doctors have caused other models of service delivery to be adopted across the world, leading to ongoing changes in the traditional boundaries of care between doctors, nurses, and pharmacists. Certain medical tasks are now being performed by nurses and pharmacists, for example prescribing. Healthcare policies to encourage patients to manage their own health have led to more medicines becoming available over the counter, allowing community pharmacists to

manage and treat a wide range of conditions. Further deregulation of medicines to treat acute illness from different therapeutic areas seems likely. Government policy now encourages chronic disease management as a self-care activity, and could well be the largest area for future growth of reclassification of medicines. Pharmacists, now more than ever before, need to be able to recognise the signs and symptoms, and use an evidence-based approach to treatment. Community Pharmacy is intended for all non-medical prescribers but especially for pharmacists, from undergraduate students to experienced practitioners. Key features - Guidance for arriving at a differential diagnosis - Practical prescribing tips - Trigger points for referral boxes - Other hints and tips boxes - Specific questions to ask boxes - Case studies - Self-assessment questions Consistent approach gives: - Anatomy overview - History taking and physical examination - Prevalence and epidemiology - Aetiology - Arriving at a differential diagnosis - Clinical features - Conditions to eliminate Likely causes Unlikely causes Very unlikely causes - Evidence base for OTC medicine - Practical prescribing and product selection - More on the examination of eyes, ears and mouth - New sections on future-proofing (vaccinations etc.) - New material covering inter-professional education for clinical skills. Now with a free accompanying e-book on StudentConsult which also gives additional material on: - evidence-based medicine - videos on physical examination - additional written case studies - more multiple-choice questions
