When in doubt, throw it out. Don't risk injury or infection. 2: Ask for help. Many people can do a lot of the cleanup and repairs discussed in this book. But if you have technical questions or do not feel comfortable doing something, get professional help. If there is a federal disaster declaration, a telephone "hotline" will often be publicized to provide information about public, private, and voluntary agency programs to help you recover from the flood. Government disaster programs are there to help you, the taxpayer. You're paying for them; check them out. 3: Floodproof. It is very likely that your home will be flooded again someday. Floodproofing means using materials and practices that will prevent or minimize flood damage in the future. Many floodproofing techniques are inexpensive or can be easily incorporated into your rebuilding program. You can save a lot of money by floodproofing as you repair and rebuild (see Step 8). Extreme Weather Forecasting reviews current knowledge about extreme weather events, including key elements and less well-known variables to accurately forecast them. The book covers multiple temporal scales as well as components of current weather forecasting systems. Sections cover case studies on successful forecasting as well as the impacts of extreme weather predictability, presenting a comprehensive and model agnostic review of best practices for atmospheric scientists and others who utilize extreme weather forecasts. - Reviews recent developments in numerical prediction for better forecasting of extreme weather events - Covers causes and mechanisms of high impact extreme events and how to account for these variables when forecasting - Includes numerous case studies on successful forecasting, outlining why they worked

During the BP oil leak of 2010 while the "experts" were frantically working on a solution to stop the flow, thousands of people were offered solutions. One suggestion came from a plumber named Joe Caldart, but since he wasn't a scientist with a PhD, his plan was dismissed outright. Only when a professor of engineering at Berkeley and former Shell executive recognized the validity of his idea and passed it on to BP, did they listen. Six weeks later a strikingly similar design was lowered onto the Macondo well, and the eighty-seven-day crisis ended. In this age of technology, experts, studies, and the media, more young people than ever are attending college and more degrees are being conferred every year, but with all the degrees conferred and the numbers in academia soaring, it is prudent to examine not only what is being taught and how, but also its effect on society and the culture. We are constantly bombarded with studies and so-called expert opinions that are contradictory, controversial, and ineffective. Explanations of current events are accepted at face value by the common man of today because they are informed by "experts in the field." In *Shmexperts: How Ideology and Power Politics are Disguised as Science* Marc E. Fitch examines the modern myth of experts in today's twenty-four hour media cycle and explains why viewers, readers, and average Joe's should do their own research too. In understanding the underlying philosophy and motivation of these experts and the media that promote them, we will gain greater insight and critical thinking skills by which to determine whether or not an expert as cited in the media is a true expert or an agenda-driven shmexpert. In this brilliantly insightful book Fitch warns of the frightening prospect of a society led into intellectual complacency by relying on mass-media manipulation and the bureaucratization of knowledge. *Shmexperts* explores the philosophy inherent in the media's reliance on and use of experts and its negative influence on society as a whole. In this truly enlightening book, "average" Americans will learn to trust themselves over the so-called "experts" that have infiltrated the media.

The Annual Energy Outlook 2016 presents long-term projections of energy supply, demand, and prices through 2040. The projections, focused on U.S. energy markets, are based on results from EIA's National Energy Modeling System which enables EIA to make projections under alternative, internally consistent sets of

assumptions.

Earth Observation for Flood Applications Bloomsbury Publishing USA

Earth Observation for Flood Applications: Progress and Perspectives describes the latest scientific advances in Earth Observation. With recent floods around the world becoming ever more devastating, there is a need for better science enabling more effective solutions at a fast pace. This book aims at stretching from the current flood mapping to diverse real data so as to estimate the flood risk and damage. Earth Observation for Flood Applications: Progress and Perspectives includes three parts containing each a separate but complementary topic area under floods. Each chapter unfolds various applications, case studies, and illustrative graphics. In terms of flood mapping and monitoring, the usage of multi-sensor satellite data, web-services information, microwave remote sensing methods are discussed in depth. So, this book is a valuable resource for scientists, researchers, and students in the area of earth observation. - Focuses in on one specific application field of Earth Observation - Brings the latest scientific advances and perspectives from experts around the world - Includes extensive figures, tables, and case studies to illustrate real-life applications

 Energy efficiency is more of a journey than a battle. It starts with small steps, taken at the local and state levels. It is a matter of identifying and then practicing good habits in our daily lives, at home and at work. Every idea and process described in this book, if performed reasonably well, will put money in your pocket. You will not only save money; you will probably make money—and you will take important steps toward saving the planet. *Power Economics* is a book for thoughtful people who want to cut their energy costs and diminish the harmful effects of greenhouse gas emissions. Climate change and global warming are not speculative fantasies. They are real. They threaten communities, towns, cities, regions, nations, and continents. Even if you don't care about polar bears and penguins, the effects of melting icecaps and shifting ocean currents will transform your life and the lives of the people around you. *Power Economics* offers practical steps and achievable strategies for reducing the destructive impact of climate change and global warming. Yes, we need energy to live and to sustain our economies. But we don't need to burn fossil fuels and release CO2 gas at levels that will result in a global catastrophe. There are reasonable alternatives to our current practices. None of the ideas that described in this book are entirely new or totally unfamiliar. They aren't extreme or bizarre. They won't require harsh or draconian measures to work. All of them follow basic rules of common sense and can be achieved at reasonable cost. "I have done my best to convey the complexity and urgency of the matter. I hope that you find this

book informative and useful. Working together, we can shed many of our wasteful energy habits and begin the task of building a world that is safe, sustainable and healthy," writes author and energy expert Elena Cahill.

Predicting and Managing Climate-Driven Range Shifts in Plants Wolters Kluwer Law & Business

The underdog story of Will Haskell, who became a Democratic state Senator in 2018 at age twenty-two—taking on an incumbent who had been undefeated for Haskell's entire life and earning an endorsement from President Obama—is "an inspiring and wise blueprint for how you can change the world...get engaged and fight for the future you want" (Tammy Duckworth). President Obama left office with these parting words for Americans: "If you're disappointed by your elected officials, grab a clipboard, get some signatures, and run for office yourself." Twenty-two-year-old Will Haskell decided to do just that. If he ran for office and won, he would become the youngest state Senator in Connecticut history. For years, Haskell's hometown had reelected the same politician who opposed passing paid family leave, fought increases in the minimum wage, and voted down expansions of voting rights. Haskell's own vision for Connecticut's future couldn't be more different, and he couldn't stand the idea of an uncontested election. In 2018, he would be a college grad looking for his first job. Why not state Senator? When Haskell kicks off his campaign in the spring of his senior year, he's an unknown college kid facing a popular incumbent who's been in office for over two decades—as long as Haskell's been alive. Haskell's campaign manager is his roommate, and his treasurer is his girlfriend's mom. He doesn't have any professional experience. But he does have a powerful message: there's no minimum age to being on the right side of history. Six months later, Haskell's shocking upset victory gives him a historic seat in the state Senate and the responsibility to serve the 100,000 constituents in his district. Like any first job, his first term as a legislator is filled with trial and error. Creating a program that funds free tuition at Connecticut's community colleges—nice work. Falling asleep on the senate floor—needs improvement. In the tradition of Pete Buttigieg's *Shortest Way Home* and Greta Thunberg's *No One Is Too Small to Make a Difference*, this is "a call to action for young

people to engage fully in public life at this critical moment for our democracy and our planet" (Jon Ossoff).

The near-unanimous consensus among climate scientists is that the massive burning of gas, oil, and coal is having cataclysmic impacts on our atmosphere and climate. These climate and environmental impacts are particularly magnified and debilitating for low-income communities and communities of color. Energy democracy tenders a response and joins the environmental and climate movement with broader movements for social and economic change in this country and around the world. Energy Democracy brings together racial, cultural, and generational perspectives to show what an alternative, democratized energy future can look like. The book will inspire others to take up the struggle to build the energy democracy movement.

Strike Hard and Expect No Mercy: A Tank Platoon Leader in Iraq WND Books

Strike Hard and Expect No Mercy is the story of boots on the

ground in Iraq, as seen through the eyes of a tank platoon leader. Baqubah, on the eve of the Surge, and Sadr City, during the spring uprising of 2008, saw some of the darkest hours of the war. A tough dragon, the M1A2 Abrams tank and its crews were often called to crack the toughest nuts on the battlefield, and victory, even survival, was not guaranteed. It is a gritty and visceral dive into the combat experience, flavored with the anguish of loss, the exhilaration of victories, the frustrations of defeats, and the humor required to survive. Along the way, the story shares rarely told insights into the duties and expectations of an Army junior officer.

Energy Savings Calculations for Commercial Building Energy Efficiency Upgrades Simon and Schuster

Code-compliant building materials and equipment will typically have a lower initial cost; however, the lifetime energy savings of the high efficiency equipment will often justify the upfront cost premium and result in a more cost-effective solution. *Energy Savings Calculations for Commercial Building Energy Efficiency Upgrades* assists energy professionals, contractors, building owners, and managers in developing energy savings estimates that can facilitate a quick assessment of the potential energy savings that might be realized when replacing existing building components with the highest efficiency equipment. It also provides algorithms to estimate greenhouse gas emission reductions that may be achieved by building energy efficiency upgrades and the impact these upgrades can have on building electrification-decarbonization projects. This book: Focuses on the development of energy savings estimates based upon a whole building's energy consumption and the energy consumption associated with building end-uses such as space heating, space cooling, ventilation, lighting, and so forth. Includes over 70 illustrative examples using algorithms to demonstrate how energy savings and greenhouse gas emission reductions may be estimated utilizing different strategies and equipment.
