### PEARSON HARPER

[Laser Experiments For Beginners](#) Food & Agriculture Org.

A richly illustrated book on the history of climate change in Europe. Two perspectives, one unique book: two leading experts, a historian and a climatologist, co-author a new standard work on climate history. An overview of the connection between climatic and social developments over the last 1000 years. For the first time, a historian and a climatologist with knowledge of climate history have worked closely together to create a unique book, combining climate reconstructions based on documented data in their human-historical context with temporally highly resolved analyses of climate and glaciers. "Here we can clearly see how changes in climate affected the environment and people of Europe over many centuries, with important lessons for the future. A wonderfully engaging and well-documented account by two of Europe's leading climate scientists." Prof. Dr. Raymond Bradley, Director, Climate System Research Center, University of Massachusetts, Amherst (USA) "This unique book provides new fascinating insights into the interaction of past climate and society in Europe. It can be highly recommended to climatologists, historians and geoscientists, but also to students and the broad public." Prof. Dr. Rudolf Brázdil, Department of Geography, Masaryk University, Brno (Czech Republic) "The authors offer a truly interdisciplinary combination of history and science in order to explore the complex relationships of climate and society over the past millennium. They demonstrate convincingly that climate change is nothing new while at the same time revealing the character of the unprecedented climatic epoch mankind now faces." Prof. Dr. Jan de Vries, Professor Emeritus of History and Economics, University of California, Berkeley (USA) Christian Pfister is Professor Emeritus of Economic, Social and Environmental History at the University of Bern, Switzerland. He was founding president of the European Society for Environmental History (ESEH). Heinz Wanner is Professor Emeritus of Geography and Climatology. He was co-chair of the international Past Global Changes (PAGES) project and a member of the UN Intergovernmental Panel on Climate Change (IPCC). Both scientists work at the renowned Oeschger Centre for Climate Change Research at the University of Bern.

 Evaluation of the Forecasting Capability of Selected Valuation Models for a Long-Term Equity Investment  
 In the 1990s, the global stock market experienced the birth of the new technology sector and an extraordinary increase in values. However, the surge of stock values came to an end in 2000 when stock markets dropped significantly. Especially the technology sector suffered greatly, and a high amount of wealth was erased by sharply falling markets. Could it have been possible to predict stock prices in such a market environment and, therefore, enable the equity investor to invest in undervalued stocks, if there were any? The key question for an investor in this context is whether an investment is fairly priced at the time of investment. This is of importance if one believes that stock prices can be overvalued or undervalued at times but adjust to their true values in the long-term. To form an opinion on whether an investment is fairly priced or not, i.e. overvalued or undervalued, an investor needs a valuation model. Such a model provides a theoretically correct value which can be used as a benchmark for the decision. In her study, Sussane Hakuba examines the forecasting capability of two selected valuation models for long-term equity investments over a nine-quarter time horizon (from the 4th quarter of 1999 to the 4th quarter of 2000): a) the two-stage free cash flow to equity (FCFE) model and b) the dividend discount model (DDM) as applied by JPMorgan Fleming. Susanne Hakuba looks at the application of the two equity valuation models analyzed including theory on the models, their inputs, and assumptions made. In addition, she provides discussion of the stock valuations performed and comes to conclusions and recommendations for future valuations applying the models examined.  
[Calendar of the Patent Rolls Preserved in the Public Record Office: 1340-1343](#) University Science Books  
 This book is perfect for science teachers who want to bring one of the most remarkable research tools of the 20th century into their classrooms: the laser. Requiring only a low-cost, low-power laser, the book presents a series of experiments for in-class demonstrations or student activities

 Very few studies have explored in detail the experiences of Chinese students at German universities, this study is an attempt to create a balance. The research focuses on psychological and sociocultural adjustment experiences of Chinese students at a

German university, i.e. Ludwig-Maximilians-Universität in Munich, and their situation after graduation. It reports quantitative and qualitative data and discusses practical implications of the findings. The study provides a starting point for all concerned to review and develop procedures and services which affect the experiences of Chinese students as well as other international students in Germany.

The concept of agile working has been adopted by many organizations that recognize the need to respond quickly and easily to new opportunities and be fit for purpose in a world of complex and continuous change. Combining cutting edge techniques, Agile Change Management offers pioneering tools to ensure your change initiative is embedded, adopted and delivers benefits throughout the organization. Including examples and best practice advice, it enables you to create your own roadmap consisting of all the processes, activities and information needed to manage any type of change initiative. By focusing on completing iterative tasks, the roadmap allows you to respond to different needs as they arise, therefore cutting time spent on planning for unnecessary resources. Also including important advice for creating the right environment for change, Agile Change Management is a comprehensive resource for anyone who wants to build the capabilities of an effective change manager. Online supporting resources include PDFs of appendices from the book on change roles, change management documents, change capabilities, a change activity index and communication activities.

Inhaltsangabe: Abstract: This work was written in collaboration of TU-Graz and INETI/CENDES-Lisbon. It reviews the current trends in environmental performance evaluation and the change towards sustainability performance evaluation on the corporate level. A new model, the corporate sustainability performance pentagon was developed and the underlying principles were explained. Existing standards and guidelines like ISO 14031 or the GRI Sustainability reporting guidelines were taken into consideration. The concept was subsequently applied to the glass sector and the case study project Novovidro. Inhaltsverzeichnis: Table of Contents: 1. About this work 1 A. Background 1 B. Abstract: Data are presented in 3 major food composition tables for the nutrient content of foods consumed in the Near East, including the amount of the various nutrients in 100 g of the edible portion of the food and the amount in the edible portion of 100 g of the food as purchased. The 3 major tables provide food composition data for: the proximate composition, mineral and vitamin content of the foods; the amino acid content; and the fatty acid content. The foods are organized under each of these tables into 14 food classes (e.g., cereals and grain products, sturdy roots and tubers, nuts and seeds, vegetables, fruits, meat and poultry, eggs, etc.). Five appendices (e.g., factors used to calculate food nutrient contents, common names of foods, scientific names of plants and fish) and 3 bibliographies (data sources for food composition tables, scientific nomenclature of plants and fish, descriptions of selected processed foods) are included. (wz).

This book directly addresses controversial issues like climate change, carbon taxes, fracking, offshoring, urban sprawl, globalization, income inequality, regulation, corruption,

compliance and enforcement, providing an informed basis for mapping the way forward. Based on his experience consulting on hundreds of industrial mega-projects, Jacoby reveals dark secrets of international supply chains for familiar products such as coffee, bottled water, gasoline, and electronic devices, and explains how government policies and business norms around the world have evolved to allow practices that can deplete natural resources, blight native landscapes, and tolerate inhumane working conditions. Rich in facts and deep with first-hand experiences from around the world, Jacoby challenges embedded thinking about growth and progress, convenience, comfort, and quality of life. The book proposes a bold and realistic new policy framework that is ground-breaking and achievable for industry, government, and consumers, and supports the plan with achievable metrics, targets, and accountabilities. While his first book promoted global supply chain optimization based on industry "best practices" and his second book fine-tuned the techniques for oil, gas, and power companies, Jacoby takes a holistic perspective in this third book, acknowledging and proposing solutions for the problems caused in part by these "optimized" global supply chains.

[Calendar of the Patent Rolls Preserved in the Public Record Office: Henry III. \(6 v. \)](#)

Cereals belong to the most important elements in the history of mankind. From the beginning of agriculture, cereals have been by far the most important staple food in the world. Although the cereal consumption decreased to a low level in the developed countries in Europe and North America, in the developing countries over two-thirds of the calorie and protein intake is based on cereals. A substantial quantity of cereals goes indirectly

into food via feed to animals. Generally, cereal proteins are classified as proteins of lower biological value because of shortage in lysine and some other essential amino acids. Recent developments in the determination and evaluation of the biological value of proteins and protein mixtures suggest that the oversimplified earlier evaluation of cereal proteins must be reviewed. This book contains the edited proceedings of the International Symposium on "Amino Acid Composition and Biological Value of Cereal Proteins", held in Budapest, Hungary, May 31-June 1, 1983, under the sponsorship of the International Association for Cereal Chemistry, Hungarian Scientific Society for Food Industry and Grain Trust, Hungary, with supplemental invited contributions. Scientists (biologist, plant breeders, farmers, chemists, biochemists, engineers, food technologists and nutritionists) from 17 countries presented and reviewed, along with participants from 20 countries, the recent methodology and trends in the determination of the biological value of cereal proteins, the amino acid composition of cereal proteins and factors influencing the composition and the role of cereal proteins in nutrition and animal feeding.
