 Leonhard Euler and Daniel Bernoulli were the first to put together a useful theory circa 1750. At the time, science and engineering were generally seen as very distinct fields, and there was considerable doubt that a mathematical product of academia could be trusted for practical safety applications.  
 Euler-Bernoulli beam theory - Wikipedia  
 Euler's formula, named after Leonhard Euler, is a mathematical formula in complex analysis that

establishes the fundamental relationship between the trigonometric functions and the complex exponential function. Euler's formula states that for any real number  $x$ :  $e^{ix} = \cos x + i \sin x$ , where  $e$  is Euler's number, the base of the natural logarithm,  $i$  is the imaginary unit, the square root of  $-1$ , and  $\cos$  and  $\sin$  are the trigonometric cosine and sine functions, respectively.
