Volume 13B provides detailed information on the corrosion performance of metals and alloys, along with selection and application considerations for specific materials and corrosive environments. It explains how metals and nonmetals are affected by various elements and how to protect them with thermal spray coatings, electroplated materials, cladding, and other methods.

1.2.3. Crevice corrosion

Crevice corrosion refers to corrosion occurring in cracks or crevices formed between two surfaces (made from the same metal, different metals or even a metal and a non-metal). This type of corrosion is initiated by the restricted entrance of oxygen

Corrosion handbook - Hilti

The corrosion data in this section is mainly based on the results of general corrosion laboratory tests, which are not strictly comparable with actual service conditions. The corrosion tables provide an initial guide to the selection of materials and are intended to facilitate understanding of the different types of corrosion damage that

can arise due to poor material selection.
