How to save 20 to 60 percent on health insurance! *The End of Employer-Provided Health Insurance* is a comprehensive guide to utilizing new individual health plans to save 20 to 60 percent on health insurance. This book is written to ensure that you, your family, and your company get your fair share of the trillions of dollars the U.S. government will spend subsidizing individual health insurance plans between now and 2025. You will learn how to navigate the Affordable Care Act to save money without sacrificing coverage, and how to choose the plan that offers exactly what you, your family and your company need. Over the next 10 years, 100 million Americans will move from employer-provided to individually purchased health insurance. The purpose of *The End of Employer-Provided Health Insurance* is to show you how to profit from this paradigm shift while helping you, your family, and your employees get better and safer health insurance at lower cost. It will help you save thousands of dollars per person each year and protect you from the greatest threat to your financial future—our nation's broken employer-provided health insurance system. We are at the beginning of a paradigm shift in the way businesses offer employee health benefits and the way Americans get health insurance—a shift from an employer-driven defined benefit model to an individual-driven defined contribution model. This parallels a similar shift in employer-provided retirement benefits that took place two to three decades ago from defined benefit to defined contribution retirement plans. Written by a world-renowned economist and New York Times best-selling author, this insightful guide explains how individual health insurance offers more to employees than employer-provided plans. Using the techniques outlined in this book, you and your employer will save money on health insurance by migrating from employer-provided health insurance coverage to employer-funded individual plans at a total cost that is 20 percent to 60 percent lower for the same coverage. That's \$4,000 to \$12,000 in savings per year for a family of four for the same hospitals, same doctors,

and same prescriptions.

America's Children is a comprehensive, easy-to-read analysis of the relationship between health insurance and access to care. The book addresses three broad questions: How is children's health care currently financed? Does insurance equal access to care? How should the nation address the health needs of this vulnerable population? America's Children explores the changing role of Medicaid under managed care; state-initiated and private sector children's insurance programs; specific effects of insurance status on the care children receive; and the impact of chronic medical conditions and special health care needs. It also

examines the status of "safety net" health providers, including community health centers, children's hospitals, school-based health centers, and others and reviews the changing patterns of coverage and tax policy options to increase coverage of private-sector, employer-based health insurance. In response to growing public concerns about uninsured children, last year Congress voted to provide \$24 billion over five years for new state insurance initiatives. This volume will serve as a primer for concerned federal policymakers and regulators, state agency officials, health plan decisionmakers, health care providers, children's health advocates, and researchers.

In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. Communities in Action: Pathways to Health Equity seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

Based on City College of San Francisco's CHW Certificate Program, it begins with an overview of the historic and political context informing the practice of community health workers. The second section of the book addresses core competencies for working with individual clients, such as behavior change counseling and case management, and practitioner development topics such as ethics, stress management, and conflict resolution. The book's final section covers skills for practice at the group and community levels, such as conducting health outreach and facilitating community organizing and advocacy. Praise for Foundations for Community Health Workers "This book is the first of its kind: a manual of core competencies and curricula for training community health workers. Covering topics from health inequalities to patient-centered counseling, this book is a tremendous resource for both scholars of and practitioners in the field of community-based medicine. It also marks a great step forward in any setting, rich or poor, in which it is imperative to reduce health disparities and promote genuine health and well-being." Paul E. Farmer, MD., PhD, Maude and Lillian Presley Professor of Social Medicine in the Department of Global Health and Social Medicine at Harvard Medical School; founding director, Partners In Health. "This book is based on the contributions of experienced CHWs and advocates of the field. I am confident that it will serve as an inspiration for many CHW training programs." Yvonne Lacey, CHW, former coordinator, Black Infant Health Program, City of Berkeley Health Department; former chair, CHW Special Interest Group for the APHA. "This book masterfully integrates the knowledge, skills, and abilities required of a CHW through storytelling and real life case examples. This simple and elegant approach brings to life the intricacies of the work and espouses the spirit of the role that is so critical to eliminating disparities a true model educational approach to emulate." Gayle Tang, MSN, RN., director, National Linguistic and Cultural Programs, National Diversity, Kaiser Permanente "Finally, we have a competency-based textbook for community health worker education well informed by seasoned CHWs themselves as well as expert contributors." Ned Ryerson. That's who a lot of people picture when they think of insurance agents. Don't remember Ned? Sure you do. He was the "cheesy" insurance agent from the Bill Murray classic *Groundhog Day*. In *Ned*, we see examples of what can go so horribly awry with the insurance sales process - someone who gets people to sign on the dotted line because it's the only way they can escape him, someone who is far more of a salesman than a trusted advisor, and of course, someone who is living commission-to-commission, putting his own survival above his clients' needs. The reason all these things make Ned our "anti-mascot" is that if you fail to grasp the danger of these things, you'll undoubtedly place major obstacles between you and your career goals. Starting of course, with your quest to pass the licensing exam. Thus, the goal of this book is twofold. First and foremost, I want to help you pass the exam, and do so by a wide margin. I don't want it to be even close. I want your state's insurance commissioner to be so blown away by your score that he takes your exam home and hangs it up on his refrigerator. But second, I want this book to become the basis for your career. I want it to help shape the way you approach insurance sales so that you not only help protect others against loss, but protect yourself (and your hard-earned license) as well. Even more, I want it to protect you against an average career. I want this book to help insure your financial success. Interested? If you are, then you're in for some exciting lessons about insurance theory, products, and sales. I'll share with you both the practical and conceptual knowledge you need to get to where you want to go.

This User's Guide is intended to support the design, implementation, analysis, interpretation, and quality evaluation of registries created to increase understanding of patient outcomes. For the purposes of this guide, a patient

registry is an organized system that uses observational study methods to collect uniform data (clinical and other) to evaluate specified outcomes for a population defined by a particular disease, condition, or exposure, and that serves one or more predetermined scientific, clinical, or policy purposes. A registry database is a file (or files) derived from the registry. Although registries can serve many purposes, this guide focuses on registries created for one or more of the following purposes: to describe the natural history of disease, to determine clinical effectiveness or cost-effectiveness of health care products and services, to measure or monitor safety and harm, and/or to measure quality of care. Registries are classified according to how their populations are defined. For example, product registries include patients who have been exposed to biopharmaceutical products or medical devices. Health services registries consist of patients who have had a common procedure, clinical encounter, or hospitalization. Disease or condition registries are defined by patients having the same diagnosis, such as cystic fibrosis or heart failure. The User's Guide was created by researchers affiliated with AHRQ's Effective Health Care Program, particularly those who participated in AHRQ's DEcIDE (Developing Evidence to Inform Decisions About Effectiveness) program. Chapters were subject to multiple internal and external independent reviews.
