This textbook provides a basic introduction to ethnobiology with key concepts for beginners. It is also written for those who teach ethnobiology or related fields. The core issues and concepts, as well as approaches and theoretical positions are fully covered.

Oxford University Press  
Introduction to Finance, 17th Edition offers students a balanced introduction to the three major areas of finance: institutions and markets, investments, and financial management. Updated to incorporate recent economic and financial events, this new edition is an ideal textbook for first courses in finance—reviewing the discipline’s essential concepts, principles, and practices in a clear, reader-friendly manner. Students gain an integrated perspective of finance by learning how markets and institutions influence, and are influenced by, individuals, businesses, and governments. Designed to impart financial literacy to

readers with no previous background in the subject, the text provides a solid foundation for students to build upon in later courses in financial management, investments, or financial markets. Equations and mathematical concepts are kept to a minimum, and include understandable, step-by-step solutions. Divided into three parts, the book explains financial markets, discusses the functions of financial systems, reviews savings and investments in different sectors, describes accounting concepts and organizational structures, and more. Real-world examples featured throughout the text help students understand important concepts and appreciate the role of finance in various local, national, and global settings.

Phylogenetic Systematics, first published in 1966, marks a turning point in

the history of systematic biology. Willi Hennig's influential synthetic work, arguing for the primacy of the phylogenetic system as the general reference system in biology, generated significant controversy and opened possibilities for evolutionary biology that are still being explored. *Classification of the Acridomorphoid Insects* Answers in Genesis  
Novel Aspects of Insect-Plant Interactions Edited by Pedro Barbosa and Deborah Letourneau This volume represents the forefront of two rapidly advancing areas of ecology: three-trophic-level interactions and the interdisciplinary field of chemical ecology The book focuses on the role of microorganisms as mediators of interactions between insects and plants, providing critical appraisal of studies and suggesting ways to integrate competing hypotheses of insect-plant dynamics. 1988 (0 471-83276-6) 362 pp.  
Arthropod Biological Control Agents and Pesticides Brian A. Croft Examining the effects of pesticides on predators and parasites and exploring methods for reducing negative impacts of pesticide use, this book

focuses on the interaction of pesticides with entomophagous arthropods. It surveys the history of research in the field and discusses susceptibility assessment, lethal, sublethal, and ecological effects of pesticides, and selectivity, resistance, and resistance management. 1990 (0 471-81975-1) 723 pp.

Lepidopteran Anatomy, John Eaton This single-source treatment on the anatomy of Lepidoptera provides a detailed exposition of its anatomy plus all its life stages, including the larva and adult forms of the exoskeleton, musculature, organ systems, and specialized structures. As the only thorough examination of the morphology of this insect group, it is an essential acquisition for entomologists, morphologists, and insect physiologists. 1988 (1-05862-9) 257 pp.

Integrated Pest Management Systems and Cotton Production Edited by Ray Frisbie, Kamal El-Zik, and L. Ted Wilson The most complete and authoritative work available on the subject, this book brings together information on integrated pest management strategies that are

applicable to cotton. It addresses economic, agronomic, and biological factors of pest management and focuses on plant resistance to pests and the genetic rationale for improving plant health. 1989 (0 471-81782-1) 437 pp.

A Concise Etymological Dictionary of the English Language The Fossil Record Unearthing Nature's History of Life Evolutionists rely on the fossil record for support of their theory, but what does that record really reveal? ICR geologist Dr. John Morris and zoologist Frank Sherwin unearth the evidence of earth's history and conclude that the fossil record is incompatible with evolution, but remarkably consistent with the biblical account of creation and the great Flood of Noah's day.

New Approaches to Speciation in the Fossil Record provides the most up-to-date and comprehensive examination of recent advances in the analysis of speciation since then.

This collection of case studies seeks to reexamine the understanding of the speciation patterns that appear in the fossil record through stringent analysis of the patterns and their presumed processes. The contributions address the questions of speciation by conducting specific, detailed studies of particular lineages. The rigorous techniques of morphological analysis, quantitative genetic analysis, phylogenetic analysis, and sedimentary completeness are employed to offer a fresh look at speciation. New Approaches to Speciation in the Fossil Record is divided into three sections. The first part gives a historical perspective on the issues under consideration, and explores the current debates and future directions for research. In

Part II, five case studies describe speciation patterns, while raising significant methodological issues for further inquiry. The third section looks at the large-scale macroevolutionary issues that affect patterns in the fossil record. The new perspectives revealed here make this a unique resource for students, teachers, and professionals in the fields of paleontology and evolutionary biology.

Digital Media Criticism is an introductory text about media criticism - the act of interpreting and making sense of a range of new media texts that we use (and create) on a daily basis - offering a critical language and a methodological template for interrogating and analyzing the complex texts of digital media. Individual chapters connect key methods of media criticism - genre, auteur, cultural/ideological, and ethnographic - with digital culture. Case studies of social media, user generated content, cell phones, and video games are provided, which include everything from downloading ring tones and making new

(Facebook) friends, to creating an avatar, texting, and opening a window on RL (real-life). Insightful and accessible, the book looks at the possibilities and limits of the digital age for us - as creators, consumers, and distributors of content. It will be useful to undergraduates studying media criticism, digital culture and communication, and media literacy, and is written to invite them into a conversation about the culture of the digital age.

The purpose of this research paper is to try to clarify and evaluate the major issues and arguments in the debate on Import Substitution Industrialization Strategy (ISI) between the

neoclassical economists and the development economists. In particular, it will focus on some basic underlying models employed by the two schools of thought, rather than on specific policy recommendations given by either school. It will conclude that the critiques against ISI from the neoclassical economists are based on a static equilibrium model, which can not fully comprehend the dynamic relationship between growth and ISI at a macroeconomic level. This paper starts by examining the historical background and formative influences of ISI, then goes on to compare and contrast the structuralist rationales for ISI and neoclassical rationales against it. The conclusion I reached is that the fundamental rationales behind ISI-- the infant industry argument, external economies and linkages effects--remain intellectually valid. The issue of terms of trade has important relevance to development economics but should be studied in a different context. The general conclusion of this paper is that import substitution as an industrialization strategy remains viable and may be of great

importance or less developed countries that want to catch up economically with industrialized countries.
