**International Plumbing Code 2012** McGraw-Hill Professional Publishing

2015 National Standard Plumbing Code Illustrated provides the latest information about common materials, fixtures, devices and equipment systems used or installed in plumbing systems. It is compatible with codes used nationwide and follows the numerical sequence of ANSI A.40.8. The code contains many revisions that have been included to promote sustainable plumbing practice. Appendix G is intended to promote sustainable plumbing practice and has been updated with revised excerpts from the IAPMO Green Plumbing and Mechanical Code Supplement. Used in conjunction with PHCC's Plumbing Apprentice Training Program, the guide's illustrations and supplementary notes make it an indispensable training tool.

National Plumbing Products Efficiency Act of 1989 Government Printing Office

This code is founded upon certain basic principles of environmental sanitation and safety through properly designed, acceptably installed, and adequately maintained plumbing systems. Some of the details of plumbing construction may vary, but the basic sanitary and safety principles desirable and

necessary to protect the health of the people are the same everywhere. As interpretations may be required, and as unforeseen situations arise that are not specifically covered in this code, the 23 principles in items A to W shall be used to define the intent.

*Recommended Minimum Requirements for Plumbing*  
 Excerpt from National Plumbing Code: Minimum Requirements for Plumbing In April, 1936, Subcommittee No. 1 was organized to under take this task and although it held a number of meetings

during the years 1936 to 1939, little progress was made. However, in July, 1939, this committee was discharged and organizations known to be interested in this subject were invited to name official representatives on a new representative subcommittee whose duty it would be to develop an American Standard Plumbing Code. The organization meeting of Subcommittee No. 1 was held in New York on April 16, 1941, at which a subgroup was appointed to study the plumbing codes now available and to develop a tentative draft of an American Standard Plumbing Code. At the time thirty(30) national organizations and government bodies were represented on Subcommittee No. 1. The drafting subgroup held its first meeting in April, 1941, followed by numerous meetings and informal conferences. Its first report was issued in the spring of 1942 in the form of seven sections of the proposed code which were distributed to interested individuals and organizations for criticism and comment. These were very favorably received and its second report covering eight additional sections, dated June, 1944, was also considered and met with a favorable reception. This code is based on the 2018 National Standard Plumbing Code Illustrated and updated with recent 20018 New Jersey amendments.

#### *Health Aspects of Plumbing*

The 2019 Edition of the California Plumbing Code® (CPC) contains plumbing design and construction standards. Provisions contained in the CPC provide minimum standards to safeguard life or limb, health, property and public welfare. It also protects against

hazards that may arise from the use of plumbing piping and systems by regulating and controlling the design, construction, installation, quality of materials, location and operation of plumbing piping systems within the State of California.

#### *Revised National Plumbing Code of the Philippines*

President Lyndon B. Johnson in his message to Congress on March 2, 1965, called for the creation of a commission to study building codes, housing codes, zoning, local and Federal tax policies and development standards. He said such a commission could provide knowledge that would be useful in dealing with slums, urban growth, sprawl and blight, and to insure decent and durable housing.

#### **Methods of Estimating Loads in Plumbing Systems**

A comprehensive reference to the three major plumbing codes in use today. The book shows how to apply sound plumbing principles to code requirements, aiming to provide an understanding of what must be done to comply with plumbing code regulations and pass inspection.

#### Water-distributing Systems for Buildings

This publication describes the processes involved in the design installation and maintenance of modern plumbing systems. It recommends a number of plumbing system design and installation specifications that have demonstrated their validity from years of experience. It also examines the microbiological chemical physical and financial risks associated with plumbing and outlines the major risk management strategies that are used in the plumbing industry and emphasizes the importance of measures to conserve supplies of clean water. This work is dedicated to assisting developing countries in achieving the best possible plumbing levels to ensure the highest health benefits from use of sound plumbing practices. It is aimed at administrators and plumbers working in areas that are served by a mains drinking- water supply or sewerage system or are about to install a mains drinking- water supply or sewerage system. It should be of particular value to those working in countries or areas that are in the early stages of introducing modern plumbing systems. While it draws attention to the problems of drinking-water supply and waste removal in developing countries and outlines some of the strategies currently used it does not systematically cover issues specific to developing countries.
