This edited volume
provides an innovative
contribution to the debate
on contemporary
European geopolitics by
tracing some of the new
political geographies and
geographical imaginations
emergent within - and
made possible by - the
EU's actions in the
international arena.
Drawing on case studies
that range from the Arctic

to East Africa, the nine
empirical chapters
provide a critical
geopolitical reading of the
ways in which particular
places, countries, and
regions are brought into
the EU's orbit and the
ways in which they are
made to work for
'EU'rope. The analyses
look at how the spaces of
'EU'ropean power and
actorness are narrated

and created, but also at how 'EU'rope's discursive (and material) strategies of incorporation are differently appropriated by local and regional elites, from the southern shores of the Mediterranean to Eastern Europe and the Balkans. The question of EU border management is a particularly important concern of several contributions, highlighting some of the ways in which the Union's border-work is actively (re)making the European space.
The Genesis of Geopolitics

and Friedrich Ratzel

This is a new examination of Halford Mackinder's seminal global geostrategic work, from the perspective of geography, diplomatic history, political science, international relations, imperial history, and the space age. Mackinder was a man ahead of his time. He foresaw many of the key strategic issues that came to dominate the twentieth century. Until the disintegration of the Soviet Union, western defence strategists feared

that one power, or alliance, might come to dominate Eurasia. Admiral Mahan discussed this issue in *The Problem of Asia* (1900) but Mackinder made the most authoritative statement in "The Geographical Pivot of History" (1904). He argued that in the "closed Heart-Land of Euroasia" was a strategically placed region, with great resources, that if controlled by one force could be the basis of a World Empire. James Kurth, in *Foreign Affairs*, has commented that it

has taken two World Wars and the Cold War to prevent Mackinder's prophecy becoming reality. In World War I and World War II Germany achieved huge territorial gains at the expense of the Russian empire and the Soviet Union. In the former conflict the Russian empire was defeated by Germany but the western powers insisted that the territorial gains made by Germany, at the treaty of Brest-Litovsk, be given up. In World War II Britain and the US gave material

support to Stalin's totalitarian regime to prevent Nazi Germany gaining control of the territory and resources that might have been a basis for world domination. The west, highly conscious of Mackinder's dictum (1919) that "Who rules East Europe commands the Heartland," quickly adopted policies to contain the Soviet Union. History has therefore proved Mackinder's work to be of vital importance to generations of strategic thinking and he remains a

key influence in the new millennium. This book will be of great interest to all students and scholars of strategic studies and military history and of geopolitics in particular.

Political Geography

This authoritative Handbook presents a comprehensive analysis of the spatial transformation of the state; a pivotal process of globalization. It explores the state as an ongoing project that is always changing, illuminating the new spaces of geopolitics that

arise from these political, social, cultural, and environmental negotiations.

On Geopolitics shows how the 'new geopolitics' combines the fields of geography and international relations to create a comprehensive overview of current political developments. Using recent developments in geographical technology as well as traditional theories and methods, Harvey Starr explores themes of spatiality and territoriality as they

connect to international affairs. He also examines geopolitical dynamics beyond borders in a world now buffeted by non state actors and subject to intergovernmental institutions and norms. On Geopolitics is a brilliant synthesis of Starr's ongoing work on conflict and co-operation, alliances, opportunity, and willingness, within a geographic framework. At the same time, Starr points the way toward new tools and techniques for the study of globalisation and world

politics.

Critical Geopolitics

Rowman & Littlefield

"A comprehensive reader for my political geography course. Good summaries at the end, and articles include effective case study examples." - Rachel Paul, Western Washington University "A very useful and comprehensive introduction to key concepts in political geography. This book provides useful context not just for 'traditional' political geography modules, but also those examining broader issues

of power, resistance and social movements." - Gavin Brown, University of Leicester "Vital for introducing basic concepts and terminology in a clear and concise fashion. The short chapters are accessible and well supplemented with pertinent examples." - Daniel Hammett, Sheffield University "I found the book to be very useful in a supplemental capacity, full of information that would be useful for an undergraduate or early graduate student." - Jason

Dittmer, University College London This textbook forms part of an innovative set of companion texts for the human geography subdisciplines. Organized around 20 short essays, Key Concepts in Political Geography provides a cutting-edge introduction to the central concepts that define contemporary research in the field. Involving detailed yet expansive discussions, the book includes: An introductory chapter providing a succinct overview of the recent

developments in the field
 Over 20 key concept

 Geopolitics identifies and
 scrutinizes the central
 features of geopolitics
 from the sixteenth
 century to the present.
 The book focuses on five
 key concepts of the
 modern geopolitical
 imagination: * Visualising
 the world as a whole * The
 definition of geographical
 areas as 'advanced' or
 'primitive' * The notion of
 the state being the
 highest form of political
 organization * The pursuit
 of primacy by competing
 states * The necessity for

hierarchy.

 We live in a rapidly
 changing world in which
 politics is becoming both
 more and less predictable
 at the same time: this
 makes political geography
 a particularly exciting
 topic to study. To make
 sense of the continuities
 and disruptions within this
 political world requires a
 strongly focused yet
 flexible text. This new
 (sixth) edition of Peter
 Taylor's Political
 Geography proves itself fit

for the task of coping with a frequently and rapidly changing geo-political landscape. Co-authored again with Colin Flint, it retains the intellectual clarity, rigour and vision of previous editions, based upon its world-systems approach. Reflecting the backdrop of the current global climate, this is the Empire, globalization and climate change edition in which global political change is being driven by three related processes: the role of cities in economic and political networks; the

problems facing territorially based notions of democratic politics and citizenship, and the ongoing spectre of war. This sixth edition remains a core text for students of political geography, geopolitics, international relations and political science, as well as more broadly across human geography and the social sciences.

Prisoners of Geography

Macmillan

In this book, O' Tuathail writes about the politics of the geographical struggle, and about the geography

of global politics. It is the first geographical study to tackle geopolitical writing from a poststructuralist position.

Handbook on the Changing Geographies of the State Taylor & Francis

This edited collection explores the boundaries between political and financial geographies, focusing on the linkages between the changing strategies, policies and institutions of the state. It also investigates banks and other financial institutions affected by both state policies and a

globalizing financial system, and the financial resources available to firms as well as households. In so doing, the book highlights how an empirical focus on the semi-periphery of the financial system may generate new perspectives on the entanglement between (geo) politics and finance. *The Geopolitics of Region Building in the Black Sea* Ashgate Publishing, Ltd. Young people, and in particular children, have typically been marginalised in

geopolitical research, positioned as too young to understand or relate to the adult-dominated world of international relations. Integrating current debates in critical geopolitics and political geography with research in children's geographies, childhood studies and youth research, this book sets out an agenda for the field of children's and young people's critical geopolitics. It considers diverse practices such as play, activism, media consumption and diplomacy to show how

children's and young people's lives relate to wider regional and global geopolitical processes. Engaging with contemporary concepts in human geography including ludic geopolitics, affect, emotional geographies, intergenerationality, creative diplomacy, popular geopolitics and citizenship, the authors draw on geopolitical research with children and young people from Europe, Asia, Australasia, Africa and the Americas. The chapters highlight the

ways in which young people can be enrolled, ignored, dismissed, empowered and represented by the state for geopolitical ends. Notwithstanding this state power, the research presented also shows how young people have agency and make decisions about their lives which are influenced by wider geopolitical processes. The focus on the lives of children and young people problematises and extends what it is we think of when considering

'the geopolitical' which enriches as well as advances critical geopolitical enquiry and deserves to be taken seriously by political geographies more broadly. World Politics of Peace and War Routledge **** The first edition, 1985, is listed in BCL3. This revision emphasizes a unified approach to geopolitics via the "one-society assumption" of world-systems analysis. Taylor (geography, U. of Newcastle upon Tyne) looks at power in different

institutions of the world economy dealing with politicians in terms of general geopolitical world order and specific geopolitical codes. A chapter on nationalism and its ideological heritage has been added. Printed in Hong Kong on acidic paper. Annotation copyrighted by Book News, Inc., Portland, OR Cultural Perspectives, Geopolitics, & Energy Security of Eurasia Rowman & Littlefield Addressing the weakening of the nation-state and the globalizing tendencies

of the 21st century, this compilation of writings looks at international wars, boundaries, cultural conflict and world economy in a bid to address the changing relationship between politics and geography.

The Return of Geopolitics in Europe?

I.B. Tauris

In the last two decades, various states from the Global South have emerged as important players in international relations. Most popular among them is China. Brazil, India and South

Africa have also taken essential roles in global and regional politics. Compared to traditional great powers, they can be labelled 'regional great powers' or 'regional powers' because their influence is - with the exception of China - concentrated on their neighbourhood. The impact of regions, meaning the impact of geography, on the economics and politics of regional powers is surprisingly understudied. This book analyses how geographical conditions

influence the regional economics and politics of South Africa, allowing the author to delineate its region of influence.

Geopolitics of the World System Taylor & Francis

This clear and concise introductory textbook guides students through their first engagement with geopolitics. It offers a clear framework for understanding contemporary conflicts by showing how geography provides opportunities and limits upon the actions of countries,

national groups, and terrorist organizations. This second edition is fundamentally restructured to emphasize geopolitical agency, and non-state actors. The text is fully revised, containing a brand new chapter on environmental geopolitics, which includes discussion of climate change and resource conflicts. The text contains updated case studies, such as the Korean conflict, Israel-Palestine and Chechnya and Kashmir, to emphasize the multi-faceted nature of conflict.

These, along with guided exercises, help explain contemporary global power struggles, environmental geopolitics, the global military actions of the United States, the persistence of nationalist conflicts, the changing role of borders, and the new geopolitics of terrorism, and peace movements. Throughout, the readers are introduced to different theoretical perspectives, including feminist contributions, as both the practice and representation of

geopolitics are discussed. Introduction to Geopolitics is an ideal introductory text which provides a deeper and critical understanding of current affairs, geopolitical structures and agents. The text is extensively illustrated with diagrams, maps, photographs and end of chapter further reading. Both students and general readers alike will find this book an essential stepping-stone to understanding contemporary conflicts. *Proceedings of Topical Issues in International*

 Middle East is a lively and much-needed update of a well-respected work. Based on W. B. Fisher's book of the same name published in 1978, Anderson provides a comprehensive account of the physical geography which has been so instrumental to the make-up of the geopolitics of

the region. The book also covers the sociology, religion, society and economy of the region. With comprehensive illustrations and maps, it provides an excellent synopsis and critique of the complexities which have made this an intriguing and important regional geographical study.

 This work explains the course of international politics from the rebirth of the German Empire to the rise of China, with

particular, though not exclusive, reference to spatial relationships.
Geopolitics, Supply Chains, and International Relations in East Asia Routledge
 This book, originally published in 1986, shows the importance of geography in international power politics and shows how geopolitical thought influences policy-making and action. It considers the various elements within international power politics such as ideologies, territorial competition and spheres of influences, and

shows how geographical considerations are crucial to each element. It considers the effects of distance on global power

politics and explores how the geography of international communication and contact and the

geography of economic and social patterns change over time and affect international power balances.
