water and other non-timber goods and services. Often they are monocultures that do not appear to invite people for recreation and other direct uses. Yet as this book clearly shows, they can play a vital role in the provision of ecosystem services, when compared to agriculture and other forms of land use or when natural forests have been degraded. This is the first book to examine explicitly the

non-timber goods and services provided by plantation forests, including soil, water and biodiversity conservation, as well as carbon sequestration and the provision of local livelihoods. The authors show that, if we require a higher provision of ecosystem goods and services from both temperate and tropical plantations, new approaches to their

management are required. These include policies, methods for valuing the services, the practices of small landholders, landscape approaches to optimise delivery of goods and services, and technical issues about how to achieve suitable solutions at the scale of forest stands. While providing original theoretical insights, the book also gives guidance for

plantation managers, policy-makers, conservation practitioners and community advocates, who seek to promote or strengthen the multiple-use of forest plantations for improved benefits for society. Published with CIFOR *The Palgrave Handbook of Affect Studies and Textual Criticism* Springer In this book, the editors focus on architecture and communication from various

different perspectives – taking into account that the term “architecture” is used for buildings as well as in the context of computer software. Data and software also impact on our cities; raw data, however, do not convey any information – in order to generate information and communication they have to be organized and must make sense to the reader. The contributions

avoid clear separation of the various communication spheres of their disciplines. Instead, they use the wide range of approaches to explore meanings – an ambitious aim that leaves the destination wide open; the reader is invited to share in this adventure. How Politicians justify their Policies Anchor In a manner accessible to beginning undergraduates, An

Invitation to Modern Number Theory introduces many of the central problems, conjectures, results, and techniques of the field, such as the Riemann Hypothesis, Roth's Theorem, the Circle Method, and Random Matrix Theory. Showing how experiments are used to test conjectures and prove theorems, the book allows students to do original work on such problems,

often using little more than calculus (though there are numerous remarks for those with deeper backgrounds). It shows students what number theory theorems are used for and what led to them and suggests problems for further research. Steven Miller and Ramin Takloo-Bighash introduce the problems and the computational skills required to numerically investigate

them, providing background material (from probability to statistics to Fourier analysis) whenever necessary. They guide students through a variety of problems, ranging from basic number theory, cryptography, and Goldbach's Problem, to the algebraic structures of numbers and continued fractions, showing connections between these subjects and encouraging

students to study them further. In addition, this is the first undergraduate book to explore Random Matrix Theory, which has recently become a powerful tool for predicting answers in number theory. Providing exercises, references to the background literature, and Web links to previous student research projects, An Invitation to Modern Number

Theory can be used to teach a research seminar or a lecture class. **Introduction to Chemistry** Harmony This volume provides a comprehensive review of historical and current research on the function of the frontal lobes and frontal systems of the brain. The content spans frontal lobe functions from birth to old age, from biochemistry and anatomy to rehabilitation, and from normal to

disrupted function. The book is intended to be a standard reference work on the frontal lobes for researchers, clinicians, and students in the field of neurology, neuroscience, psychiatry, psychology, and health care. Tissue Oxygenation in Acute Medicine Princeton University Press This first book on this important and emerging topic presents an overview of

the very latest results obtained in single-chain polymer nanoparticles obtained by folding synthetic single polymer chains, painting a complete picture from synthesis via characterization to everyday applications. The initial chapters describe the synthetic methods as well as the molecular simulation of these nanoparticles, while subsequent chapters

discuss the analytical techniques that are applied to characterize them, including size and structural characterization as well as scattering techniques. The final chapters are then devoted to the practical applications in nanomedicine, sensing, catalysis and several other uses, concluding with a look at the future for such nanoparticles. Essential reading for polymer and

materials scientists, materials engineers, biochemists as well as environmental chemists. Modern Organonickel Chemistry John Wiley & Sons Diseases of the Sinuses: A Comprehensive Textbook of Diagnosis and Treatment, 2nd Edition, offers the definitive source of information about the basic science of the sinuses and the clinical approach to sinusitis. Since the widely

praised publication of the first edition, understanding of sinus disease has changed dramatically, mainly as a result of recent developments and new discoveries in the field of immunology. This updated and expanded edition is divided into sections addressing, separately, the pathogenesis, clinical presentation, medical and surgical management of acute and

chronic rhinosinusitis. Special entities such as autoimmune-related sinusitis, allergy and sinusitis, and aspirin-exacerbated respiratory disease are discussed in separate chapters. The role of immunodeficiency is also addressed. The management section has been fully updated to incorporate new medical modalities and surgical procedures. Developed by

a distinguished group of international experts who share their expertise and insights from years of collective experience in treating sinus diseases, the book will appeal to anyone who has an interest in sinus disease, including both physicians and allied health professionals. Internists, pediatricians, allergists, otolaryngologists and infectious disease specialists will

find the book to be an invaluable, comprehensive reference. Physician assistants and nurse practitioners who work with specialists who treat sinus disease will also benefit from the book.

The Discourse of News Values breaks new ground in news media research in offering the first book-length treatment of the discursive construction of news values through words and images.

Monika Bednarek and Helen Caple combine in-depth theoretical discussion with detailed empirical analysis to introduce their innovative analytical framework: discursive news values analysis (DNVA). DNVA allows researchers to systematically investigate how reported events are "sold" to audiences as "news" (made newsworthy) through the semiotic resources of language and image. With an interdisciplinary and multi-methodological approach, *The Discourse of News Values* analyzes authentic news discourse (both language and images) from around the English-speaking world through three new case studies: one that analyzes newsworthiness around the topic of

cycling/cyclists; another that analyzes news values in images disseminated by news media organizations via Facebook; and a third that focuses on news values in "most shared" news items. Introducing readers to the possibilities of both DNVA and corpus-assisted multimodal discourse analysis (CAMDA), *The Discourse of News Values* brings together corpus linguistics and

multimodal discourse analysis in a stimulating and unique book for researchers in Linguistics, Semiotics, Critical Discourse Analysis and Media/Journalism Studies. *The Cambridge Handbook of Consciousness* Mark Twain Media Incorporated Pub This volume provides a comprehensive account of how scholarship on affect and scholarship on texts have come to

inform one another over the past few decades. The result has been that explorations of how texts address, elicit, shape, and dramatize affect have become central to contemporary work in literary, film, and art criticism, as well as in critical theory, rhetoric, performance studies, and aesthetics. Guiding readers to the variety of topics, themes, interdisciplinary dialogues,

and sub-disciplinary specialties that the study of interplay between affect and texts has either inaugurated or revitalized, the handbook showcases and engages the diversity of scholarly topics, approaches, and projects that thinking of affect in relation to texts and related media open up or enable. These include (but are not limited to) investigations of what attention to

affect brings to established methods of studying texts—in terms of period, genre, cultural contexts, rhetoric, and individual authorship. *Ecosystem Goods and Services from Plantation Forests* Cambridge University Press Modelling and simulation in acoustics is currently gaining importance. In fact, with the development and improvement of innovative computational

techniques and with the growing need for predictive models, an impressive boost has been observed in several research and application areas, such as noise control, indoor acoustics, and industrial applications. This led us to the proposal of a special issue about “Modelling, Simulation and Data Analysis in Acoustical Problems”, as we believe in the importance of these topics in

modern acoustics' studies. In total, 81 papers were submitted and 33 of them were published, with an acceptance rate of 37.5%. According to the number of papers submitted, it can be affirmed that this is a trending topic in the scientific and academic community and this special issue will try to provide a future reference for the research that will be

developed in coming years. *Chemistry Chart* Saunders The Cambridge Handbook of Consciousness is the first of its kind in the field, and its appearance marks a unique time in the history of intellectual inquiry on the topic. After decades during which consciousness was considered beyond the scope of legitimate scientific investigation, consciousness re-emerged as a popular

focus of research towards the end of the last century, and it has remained so for nearly 20 years. There are now so many different lines of investigation on consciousness that the time has come when the field may finally benefit from a book that pulls them together and, by juxtaposing them, provides a comprehensive survey of this exciting field. An authoritative desk

reference, which will also be suitable as an advanced textbook. *The American Psychiatric Association Practice Guidelines for the Psychiatric Evaluation of Adults, Third Edition* Springer This text provides a comprehensive overview of the essential concepts and malignancies of hematology. Now in its second edition, the book reviews every major hematologic disorder and disease entity

in thorough detail, from incidence and prevalence to patient and treatment-related issues. Formatted in an organized and easy-to-read outline style to facilitate rapid learning and information processing, the book allows readers to easily locate topics of immediate interest without wading through entire sections to obtain the desired data. Written by a diverse range of experts in the field,

Concise Guide to Hematology, Second Edition is a valuable resource for clinicians, residents, trainees, and entry-level fellows who work in or are just entering the field of hematology. *Introduction to Statistics* John Wiley & Sons How is life related to the mind? Thompson explores this so-called explanatory gap between biological life and consciousness, drawing on sources as

diverse as molecular biology, evolutionary theory, artificial life, complex systems theory, neuroscience, psychology, Continental Phenomenology, and analytic philosophy. Ultimately he shows that mind and life are more continuous than previously accepted, and that current explanations do not adequately address the myriad facets of the biology and

phenomenology of mind. How the Jews Invented Hollywood Harvard University Press
A provocative, original, and richly entertaining group biography of the Jewish immigrants who were the moving forces behind the creation of America's motion picture industry. The names Harry Cohn, William Fox, Carl Laemmle, Louis B. Mayer, Jack and Harry Warner, and Adolph Zucker

are giants in the history of contemporary Hollywood, outsiders who dared to invent their own vision of the American Dream. Even to this day, the American values defined largely by the movies of these émigrés endure in American cinema and culture. Who these men were, how they came to dominate Hollywood, and what they gained and lost in the process is the exhilarating story of An Empire of

| <p>Their Own. <i>Synthesis, Characterization, Simulations, and Applications</i> Springer Since Dr. Brizendine wrote <i>The Female Brain</i> ten years ago, the response has been overwhelming. This New York Times bestseller has been translated into more than thirty languages, has sold nearly a million copies between editions, and has most recently inspired a</p> | <p>romantic comedy starring Whitney Cummings and Sofia Vergara. And its profound scientific understanding of the nature and experience of the female brain continues to guide women as they pass through life stages, to help men better understand the girls and women in their lives, and to illuminate the delicate emotional machinery of a love relationship.</p> | <p>Why are women more verbal than men? Why do women remember details of fights that men can't remember at all? Why do women tend to form deeper bonds with their female friends than men do with their male counterparts? These and other questions have stumped both sexes throughout the ages. Now, pioneering neuropsychiatrist Louann Brizendine,</p> |
|--|---|--|

M.D., brings together the latest findings to show how the unique structure of the female brain determines how women think, what they value, how they communicate, and who they love. While doing research as a medical student at Yale and then as a resident and faculty member at Harvard, Louann Brizendine discovered that almost all of the clinical data in existence on

neurology, psychology, and neurobiology focused exclusively on males. In response to the overwhelming need for information on the female mind, Brizendine established the first clinic in the country to study and treat women's brain function. In *The Female Brain*, Dr. Brizendine distills all her findings and the latest information from the scientific community in a highly

accessible book that educates women about their unique brain/body/behavior. The result: women will come away from this book knowing that they have a lean, mean, communicating machine. Men will develop a serious case of brain envy. *Shadows cast and shadows cast out* Cambridge University Press
Dr. Greg Zacharias, former Chief Scientist of the United States Air Force

(2015-18), explores next steps in autonomous systems (AS) development, fielding, and training. Rapid advances in AS development and artificial intelligence (AI) research will change how we think about machines, whether they are individual vehicle platforms or networked enterprises. The payoff will be considerable, affording the US military significant protection for aviators,

greater effectiveness in employment, and unlimited opportunities for novel and disruptive concepts of operations. Autonomous Horizons: The Way Forward identifies issues and makes recommendations for the Air Force to take full advantage of this transformational technology. **Principles of Frontal Lobe Function** Autonomous HorizonsThe Way Forward Autonomous HorizonsThe Way

the first edition worked together again to revise data for the second edition of this popular volume. Based at three of the world's leading centers for the study and treatment of headache, these experts share their insights on every aspect of this common and irritating condition. In particular, the sections on migraine, cluster headache and vascular disease have been updated. Based on the classification system developed by the International Headache Society, *Headache in Clinical Practice* provides those interested in headache with an up-to-date compendium of current opinion, from epidemiology, pathophysiology and investigation, through options for intervention and management. *Bioactive Heterocyclic Compound Classes* Routledge A groundbreaking book to offer a comprehensive account of important reactions involving arynes. *Modern Aryne Chemistry* is the first book on the market to offer a conceptual framework to the reactions related to arynes. It also provides a systematic introduction to the cycloaddition reactions, insertion reactions and transition-metal-catalyzed transformations of arynes.

The author, a noted expert on the topic, highlights a novel strategy for carbon-carbon and carbon-heteroatom bond construction using arynes. The book reviews the recent use of aryne chemistry for the development of new multicomponent reactions. New advances in this area has shown rapid emergence of a new class of reactions classified under rearrangement reactions.

The author also includes information on aryne methods that have been employed for the synthesis of several natural products. The simplicity and sophistication of the synthetic strategy using arynes can serve as a springboard for organic chemists to explore new possibilities and imagine applications of the concept of arynes. This important book: Presents a one-of-kind comprehensive
