Packed with good advice on choosing the right Ducati bevel twin, with a comprehensive inspection guide and in-depth

analysis of strengths and weaknesses, Ducati Bevel Twins covers desirable upgrades, modifications to avoid, valuation and predicting which models will become collectible (if they aren't already).

Illustrated throughout with photos of key areas to check and foibles to be aware of, and featuring details ranging from the Ducati community, to whether a Ducati bevel twin will suit you and your lifestyle, this is the complete guide to choosing, assessing, and buying the Ducati bevel twin of your dreams.

Written by Ian Falloon, an expert who enjoyed a close association with the factory and the engineers during the period these bikes were manufactured, providing him with an invaluable insight into their development. He has been involved with Ducati motorcycles, and bevel twins in particular, for nearly 40 years and, in addition to writing several books covering these models, he is an avid restorer with over 20 bevel twin restorations to his credit.

In typically hapless fashion, Turner jumps on his motorbike and sets out in search of adventure. Heading north, he aims his heavily laden Kawasaki towards the massive Øresund bridge, and passes from Copenhagen into Sweden, then onto the majestic waterfalls of Norway. Turner then determines to visit St. Petersburg, a mere 1700km east, before heading back home to London, via most of Poland and a good deal of Germany.

Eighteen million Vespas have buzzed their way into the world since 1946. Stood end to end, they would form a line measuring 32,000

kilometres – 20,000 miles – in length. This is an almost inconceivable statistic, as with many things that transcend conventional measures and at some point achieve cult status. How did the little machine come so far? The answer is simple. The Vespa has always remained the Vespa, true to itself, and has what others lack: real character! This book tells the Vespa's story via over 470 photos, corrects many misconceptions and lets the reader become immersed in the culture of Vespa and la bella vita.

Many books have been published about Italian motorcycles, but none has focused exclusively on the Italian motorcycle-based chopper, bobber, trike, and quad custom bike scene - until now. Even though customising is not normally associated with Italian brands, there are some fantastic individually-built Italian custom bikes out there, old and new. In recognition of the trend, Ducati entered into a new market segment when it launched its power cruiser Diavel in November 2010, while Moto Guzzi has its Aquila Nero range ... these and many other custom-style bikes have been well-received in the

customs scene. This book looks at some of the fascinating custom projects around the world, accompanied by stunning photography of the finished bikes. A great book for Italian bike fans, and fans of the custom bike scene in general.

Work on the human brainstem has been impeded by the unavailability of a comprehensive diagrammatic and photographic atlas. In the authors' preliminary work on the morphology of the human brainstem (The

Human Nervous System, 1990), Paxinos et al demonstrated that it is possible to use

chemoarchitecture to establish a number of human homologs in structures known to exist in the rat, the most extensively studied species. Now, with the first detailed atlas on the human brainstem in more than forty years, the authors present an accurate, comprehensive, and convenient reference for students, researchers, and pathologists. Key Features * The first detailed atlas on the human brainstem in more than forty years *

Delineated as accurately as The Rat Brain in Stereotaxic Coordinates, Second Edition

(Paxinos/Watson, 1986), the most cited book in neuroscience * Based on a single brain from a 59-year-old male with no medical history of neurological or psychiatric illness *

Represents all areas of the medulla, pons, and midbrain in the plane transverse to the longitudinal axis of the brainstem * Consists of 64 plates and 64 accompanying diagrams with an interplate distance of half a millimeter * The photographs are of Nissl

and acetylcholinesterase (AChE) stained sections at alternate levels *

Establishes systematically the human homologs to nuclei identified in the brainstem of the rat
