Managing Business Performance John Wiley & Sons
This book offers new insights into the complex set of activities and decisions of product innovation management. It provides concepts, methods, and tools that can help accelerate the introduction of successful products to the market in an increasingly competitive and changing business landscape. It also offers examples and case studies, and it is the result of more

than 20 years of study, research, and consulting carried out by the two authors in the field of innovation management. The book discusses the demanding challenges of product innovation and offers practitioners guidance on how to respond to these challenges. It presents a three-level framework (the “innovation pyramid”), which reflects the core components of a firm’s innovation capability: first, intelligence - absorbing information and knowledge from the outside world by looking beyond the familiar territories of the current market, technology, and customers; second, discovery - exploring opportunities for innovation through creative ideation and technology experimentation; and third, development - transforming

opportunities into profitable new products and services.

The book presents a list of 31 reasonable demands that executives can and must place on their staff members to ensure excellence in the way their programs and projects are created, selected for funding, planned, and executed. Placing these demands communicates to the entire enterprise that top management understands what it takes to achieve the best performance possible and fully supports the continuous improvement needed to ensure continued success. *Leading and Managing Innovation* explains how to measure the project management maturity level

of an enterprise, benchmark against competitors, and identify where project management improvements are required. Building the Agile Enterprise Elsevier

The process of user-centered innovation: how it can benefit both users and manufacturers and how its emergence will bring changes in business models and in public policy. Innovation is rapidly becoming democratized. Users, aided by improvements in computer and communications technology, increasingly can

develop their own new products and services. These innovating users—both individuals and firms—often freely share their innovations with others, creating user-innovation communities and a rich intellectual commons. In *Democratizing Innovation*, Eric von Hippel looks closely at this emerging system of user-centered innovation. He explains why and when users find it profitable to develop new products and services for themselves, and why it often pays users to reveal their innovations freely for the use of all. The trend toward democratized innovation can be seen in software and information products—most notably in the free and open-source software movement—but also in physical products. Von Hippel's many examples of user innovation in action range from surgical equipment to surfboards to software security features. He shows that product and service development is concentrated among "lead users," who are ahead on marketplace trends and whose innovations are often commercially attractive. Von Hippel argues that manufacturers should redesign their innovation processes and that they should systematically seek out innovations developed by users. He points to businesses—the custom semiconductor industry is one example—that have learned to assist user-innovators by providing them with toolkits for developing new products. User innovation has a positive impact on social welfare, and von Hippel proposes that government policies, including R&D subsidies and tax credits, should be realigned to eliminate biases against it. The goal of a democratized user-centered innovation system, says von Hippel, is well worth striving for. An electronic version of this book is available under a Creative Commons license.

There are two traditional views of the role of intellectual property (IP) within the field of innovation management: in innovation management research, as an indicator or proxy for innovation inputs or outputs, e.g. patents or licensing income; or in innovation management practice, as a means of protecting knowledge. *Exploiting Intellectual Property to Promote Innovation*

and Create Value argues that whilst both of these perspectives are useful, neither capture the full potential contribution of intellectual property in innovation management research and practice. The management of IP has become a central challenge in current strategies of Open Innovation and Business Model Innovation, but there is relatively little empirical work available. Theoretical arguments and empirical research suggest that from both an innovation policy and management perspective, the challenge is to use IP to encourage risk-taking and innovation, and that a broader repertoire of strategies is necessary to create and capture the economic and social benefits of innovation. This book identifies how intellectual property can be harnessed to create and capture value through exploiting new opportunities for innovation. It is organized around three related themes: public policies for IP; firm strategies for IP; and creating value from IP, and offers insights from the latest research on IP strategies and practices to create and capture the economic and social benefits of innovation.

Based on in-depth research within more than three dozen corporations—including Citibank, Essilor, GE, GlaxoSmithKline, HP Labs, HP Singapore, Nokia, Novartis, Shiseido, Siemens, Snecma, Synopsys, and Xerox—this book bridges theory and practice. *Managing Global Innovation* gives you the tools to harness critical expertise from around the globe—and channel it into your innovation programs.
