Developing and Maintaining State, Territorial, Tribal, and Local Government Emergency Plans National Academies Press
 Provides a comprehensive examination of emergency management and offers concepts and strategies for creating effective programs This book looks at the larger context within which emergency management response occurs, and stresses the development of a program to address a wide range of issues. Not limited to traditional emergency response to natural disasters, it addresses a conceptual model capable of integrating multiple disciplines and dealing with unexpected emergencies. *Emergency Management: Concepts and Strategies for Effective Programs, Second Edition* starts by focusing on the three pillars on which successful emergency management is based: an understanding of history, knowledge of social science research, and technical expertise in emergency management operations. It

provides insight as to how emergency management has evolved and suggests reasons why the current method of response planning doesn't work as well as it should. The book then goes on to discuss establishing and administering the emergency management program. It looks at the analysis of risk as the basis for strategy development, and considers both the traditional macro view of hazard identification and analysis as well as the micro view required for continuity planning. Strategy development is examined next, followed by coverage of planning process, techniques and methods. The book finishes with chapters on coordinating response, leading in crisis, and crisis management. Features two new chapters on the development of national response strategy and leadership in a crisis Incorporates the Principles of Emergency Management adopted by many emergency management professional associations and agencies Encourages the development of an enterprise wide program to address a wide range of potential threats Covers the various phases of comprehensive emergency management Integrates academic research with practical experience and case studies

Emergency Management: Concepts and Strategies for Effective Programs is an important book that will benefit students, law enforcement, and state and local emergency managers and planners involved in emergency management.

Disasters and Public Health: Planning and Response, Second Edition, examines the critical intersection between emergency management and public health. It provides a succinct overview of the actions that may be taken before, during, and after a major public health emergency or disaster to reduce morbidity and mortality. Five all-new chapters at the beginning of the book describe how policy and law drive program structures and strategies leading to the establishment and maintenance of preparedness capabilities. New topics covered in this edition include disaster behavioral health, which is often the most expensive and longest-term recovery challenge in a public health emergency, and community resilience, a valuable resource upon which most emergency programs and responses depend. The balance of the book provides an in-depth review of preparedness, response, and recovery challenges for 15 public health threats. These chapters also provide lessons learned from responses to each threat, giving users a well-rounded introduction to public health preparedness and response that is rooted in experience and practice. Contains seven new chapters that cover law, vulnerable populations, behavioral health, community resilience, preparedness capabilities, emerging and re-emerging infectious diseases, and foodborne threats Provides clinical updates by new MD co-author Includes innovative preparedness approaches and lessons learned from current and historic public health and medical responses that enhance clarity and provide valuable examples to readers Presents increased international content and case studies for a global perspective on public health

For effective preparedness, emergency managers must comprehend how a disaster impacts not only the physical infrastructure of the affected community but also the population. They must understand how the people interact with one another, how they interact with government, and how they react to the disaster event. In other words, they must have social intelligence. *Emergency Management and Social Intelligence: A Comprehensive All-Hazards Approach* provides a comprehensive framework for understanding a community before, during, and after a disaster in order to best mitigate the effect of a disaster on its people. After an overview of what we've learned and what we haven't learned from past events, the book provides detailed case studies on a spectrum of disasters spanning a century, including hurricanes, floods, earthquakes, and oil spills. This context provides a framework for understanding a host of essential issues, including: The interplay between how people perceive people in their communities, the public policy which results from socially constructed views, and the issues which surface during and after disaster as a result The base logic of Social Intelligence which is rooted in the U.S. national security and intelligence apparatus The application of the intelligence cycle in emergency management and how to develop and understand situational awareness Baseline data points applicable to any community or jurisdiction and how they can be woven together to build on existing jurisdictional competence and real-time situational awareness How geographic information systems (GISs) are used in emergency management, along with their limitations and the different software programs available Modeling for disasters and how this helps the emergency management community plan for and respond to disasters How emergency managers can use social intelligence to build

resiliency at the local level and harness preexisting community strength before, during, and after a disaster The insight presented in this volume supplies emergency managers, policy makers, and elected officials with a powerful blueprint for implementing social intelligence in any community or organization, maximizing the effectiveness of disaster recovery efforts. Equally important, this volume supplies emergency managers, municipalities, government organizations, and private sector entities with a framework to understand and identify social and economic fault lines in communities.

Emergency Management, 2nd Edition DIANE Publishing

There are gaps in Australia's emergency management legislation. The states and territories have extensive and comprehensive emergency management legislation, but the provisions dealing with local government range from almost non-existent (in New South Wales) to significant (in Queensland) despite the clear recognition that local government has, or should have, an important role in this area. The Commonwealth has no federal emergency management legislation, and the Australian Government's authority to act during times of national crisis can be, and has been, challenged. Australia shares political traditions with both the UK and the US. Analysis of key legislation from those jurisdictions- the Civil Contingencies Act 2004 (UK) and the Robert T Stafford Disaster Relief and Emergency Assistance Act (US)- reveals important learning that could be adopted in Australia. The UK's Civil Contingencies Act provides an example of legislation that if modelled by the Australian states and territories would go a long way to mainstreaming local government involvement in contingencies management. The UK Act has less application at the Commonwealth level, given the different constitutional arrangements in Australia. For the Commonwealth, an Act modelled on the US Stafford Act would provide legislative authority for Commonwealth action, thereby reducing the possibility of legal challenge to the validity of emergency arrangements. Such emergency management legislation would also identify how the Commonwealth response is to be coordinated and managed. It would help ensure that there could be a considered whole-of-government response to any overwhelming national disaster. A Stafford-type Act may provide a clearer way through the maze that is Commonwealth-state relations at a time when action is required and clarity of responsibility is most urgently needed.

Initial priorities for U.S. participation in the International Decade for Natural Disaster Reduction, declared by the United Nations, are contained in this volume. It focuses on seven issues: hazard and risk assessment; awareness and education; mitigation; preparedness for emergency response; recovery and reconstruction; prediction and warning; learning from disasters; and U.S. participation internationally. The committee presents its philosophy of calls for broad public and private participation to reduce the toll of disasters.

This "how to" guide shows small to mid-sized local governments, whether in urban or regional settings, how to develop comprehensive emergency management plans with minimal expenditure of resources. Its modular, step-by-step approach also makes it an effective guide for non-experts and those interested in self-study. The book covers both preparedness planning and actual emergency management and includes these helpful features: Uses a modular approach to developing written plans, starting with the Preparedness Plan at the federal, provincial/state levels. At its core is the Emergency Management Plan, which is essentially the establishment and operation of the Emergency Operations Center that is central to any emergency.

Instructions also cover other common plans: 1) Emergency Social Services 2) Emergency Public Information 3) Emergency Telecommunications 4) Evacuation 5) Hazard-Specific 6) Mutual Aid Agreements Takes novice emergency planners step-by-step through the four complete processes of mitigation, preparedness, response, and recovery for natural and human-made disasters. Gives tips for a staff training matrix and for developing a timetable of graduated exercises to test the written plan. Includes checklists, summaries, plan outlines, glossary, appendices that list online resources, and suggestions for career and professional development.

An Assessment of FEMA (Federal Emergency Management Agency) Today John Wiley & Sons

This monograph provides valuable lessons in building disaster resilience for rural communities and beyond. With a focus on Florida, the authors present a comprehensive review of the current debates surrounding the study of resilience, from federal frameworks, state plans and local initiatives. They also review evaluation tools and feature first-hand accounts of county emergency managers as well as non-profit and community groups on key issues, including perspectives on vulnerable groups such as the elderly, children and farm workers. Readers will find insightful answers to such questions as: How can the concept of resilience be used as a framework to investigate the conditions that lead to stronger, more sustainable communities? What factors account for the variation across jurisdictions and geographic units in the ability to respond to and recover from a disaster? How does the recovery process impact the social, political and economic institutions of the stricken communities? How do communities, especially rural ones, collaborate with multiple stakeholders (local, regional, state, national) during the transition from recovery to resilience? Can the collaborative nature of disaster recovery help build resilient communities?. The primary audiences of this book are scholars in emergency and crisis management, planning and policy, disaster response and recovery, disaster sociology and environmental management and policy. This book can also be used as a textbook in graduate and advanced undergraduate programs / courses on disaster management, disaster studies, emergency and crisis management, environmental policy and management and public policy and administration.

Comprehensive Emergency Management for Local Governments: Butterworth-Heinemann

FEMA's Hazard Mitigation Grant Program is a powerful resource in the combined effort by Federal, State, and local government, as well as private industry and homeowners, to end the cycle of repetitive disaster damage. The Robert T. Stafford Disaster Relief and Emergency Assistance Act was passed on November 23, 1988, amending Public Law 93-288, the Disaster Relief Act of 1974. The Stafford Act included Section 404, which established the Hazard Mitigation Grant Program. In 1993, the Hazard Mitigation and Relocation Act amended Section 404 to increase the amount of HMGP funds available and the cost-share to 75 percent Federal. This amendment also encouraged the use of property acquisition and other non-structural flood mitigation measures. In an effort to streamline HMGP delivery, FEMA encourages States to develop their mitigation programs before disaster strikes. States are adopting a more active HMGP management role. Increased capabilities may include: Conducting comprehensive all-hazard mitigation planning prior to disaster events; Providing applicants technical assistance on sound mitigation techniques and hazard mitigation policy and procedures; Coordinating mitigation programs through interagency teams or councils. Conducting benefit-cost analyses; and Preparing National Environmental Policy Act reviews for

FEMA approval. States that integrate the HMGP with their frequently updated State Administrative and Hazard Mitigation Plans will create cohesive and effective approaches to loss reduction. This type of coordinated approach minimizes the distinction between "predisaster" and "post-disaster" time periods, and instead produces an ongoing mitigation effort. Hazard mitigation is any sustained action taken to reduce or eliminate long-term risk to people and property from natural hazards and their effects. A key purpose of the HMGP is to ensure that the opportunity to take critical mitigation measures to protect life and property from future disasters is not lost during the recovery and reconstruction process following a disaster. Program grant funds available under Section 404 of the Stafford Act provide States with the incentive and capability to implement mitigation measures that previously may have been infeasible. The purpose of this Desk Reference is to: Provide comprehensive information about FEMA's Hazard Mitigation Grant Program (HMGP); Increase awareness of the HMGP as an integral part of statewide hazard mitigation efforts; and Encourage deeper commitments and increased responsibilities on the part of all States and communities to reduce damage and losses from natural disasters. This Desk Reference is organized to simplify program information and assist the reader with practical guidance for successful participation in the program. Lists of program-related acronyms and definitions are included, along with appendices that amplify selected aspects of the HMGP. This Desk Reference is organized into 14 sections, each of which presents a major HMGP subject area. In each section, information is presented on the right side of the page. In several sections, job aids containing supplemental material are provided. The job aids for each section can be found at the end of the section. At the front of each section, there is a detailed table of contents to help you locate specific information.

Successful Response Starts with a Map Rothstein Publishing Kentucky's primary emergency management statutes create a statewide comprehensive emergency management program with an integrated emergency management system, and provide for assessment, mitigation, preparation, response, and recovery from threats to public safety and all major hazards. They confer emergency management powers upon the governor and the chief executives of local governments. The statutes also provide for mutual aid among the cities and counties, with other states, and the federal government. This report is one of a series that profiles emergency management and homeland security statutory authorities of the 50 states, the District of Columbia, the Commonwealth of the Northern Mariana Islands, the Commonwealth of Puerto Rico, American Samoa, Guam, and the U.S. Virgin Islands. Each profile identifies the more significant elements of state statutes, generally as codified. Congressional readers may wish to conduct further searches for related provisions using the Internet link presented in the last section of this report. The National Conference of State Legislatures provided primary research assistance in the development of these profiles under contract to the Congressional Research Service (CRS). Summary information on all of the profiles is presented in CRS Report RL32287. This report will be updated as developments warrant.

Coping with Catastrophe Butterworth-Heinemann

In order for local government to have a comprehensive emergency management program, all facets of the community, including the private business sector, must be engaged and given the opportunity to contribute. Furthermore, because neither the public sector nor the private business sector has enough expertise or resources to manage a major disaster alone being able to work collaboratively can provide an essential tool to

facilitate a coordinated response. For some jurisdictions the development of a public private partnership for emergency preparedness and response has offered a conduit for such collaboration. This thesis examines the challenges to building public private partnerships between the government and the private business sector. Through interviews with subject matter experts this research identifies the four most critical factors local government must address when contemplating the development of a public private partnership. A cross disciplined approach and incentives are offered to local government as recommendations to facilitate partnership building.

This report offers information and advice to assist all levels of government in its work to establish evidence-based policies, programs, and practices across the life cycle of disasters. This report provides examples of effective community efforts with respect to people with disabilities, and evaluates many emergency preparedness, disaster relief, and homeland security program efforts deployed by both public and private sectors. This report is based on the available literature, including empirical research as well as practical guidance materials. It is divided into three main parts, all related to disability issues. The first part explains key terms and scenarios, and examines the life cycle of comprehensive emergency management. This life cycle includes four phases: preparedness, response, recovery, and mitigation. The second section looks at strategies for working with emergency managers and maximizing the contributions of voluntary organizations. The third section reviews and summarizes policies, programs, initiatives, and trends; it culminates in a comprehensive set of interventions at the federal, state, local, and individual levels. The following appendices provide supporting materials: (1) Resources; (2) Voluntary organizations; (3) Annotated Bibliography; and (4) The Mission of the National Council on Disability.

National Academies Press

This guide highlights the findings of the National Governors' Association (NGA) Emergency Preparedness Project study, recommends an approach to comprehensive state emergency management, and offers pertinent management advice and tools

based on hard-won experience in a variety of states. Case histories based on actual experience, as told by governors, their aides, and state emergency office directors, appear as insets throughout the text. These case histories both illustrate and augment the surrounding text. The outcomes of cases describing comprehensive emergency management are hypothetical, as this practice is not yet implemented in most states. Intended for governors and their staff aides, this guide is concerned with emergency management. It is one of a series of five companion publications of the NGA Center for Policy Research.

Intensely practical and down to earth, this timely new text covers the breadth of health emergency preparedness, resilience and response topics in the context of inter-disciplinary and whole society responses to a range of threats. It includes public, private and third sector roles in preparation for and in response to natural and man-made events, such as: major incident planning; infectious disease epidemics and pandemics; natural disasters; terrorist threats; and business and service continuity management. The book builds upon the basics of risk assessment and writing an emergency plan, and then covers inter-agency working, command and control, communication, personal impact and business continuity as well as training, exercises and post-incident follow up. Detailing the full emergency preparedness and civil protection planning cycle, the book is illustrated throughout with real-life examples and case studies from global experts in the field for countries with both advanced and developing healthcare systems. This practical handbook covering the essential aspects of major incident and disaster management is ideal for undergraduate and master's students in emergency management and public health, as well as for practitioners in emergency preparedness and civil protection. It will be valuable to all health practitioners from ambulance, hospital, primary and community care, mental health and public health backgrounds.

Emergency Response Planning for Corporate and Municipal Managers DIANE Publishing

The Federal Emergency Management Agency (FEMA) was created to provide controls for the patchwork of fragmented operations spread over many agencies. The situation was the natural product of the evolution of government policy from an exclusive distribution orientation, providing aid to victims, to one that gives equal emphasis to both planning and mitigation. Within FEMA the evolution of the Integrated Emergency Management System (IEMS) is a movement towards an integrated approach to the management of the full spectrum of emergencies, hazards and disasters. IEMS stresses using the resources available to all agencies in dealing with the elements common to all emergency related situations. There is general satisfaction that the under-one-roof concept being pursued here that IEMS is leading to will, if allowed to continue, eventually meet the mandate to create a national capacity to assist state and local governments in dealing with natural and manmade disasters. However, to date, most of the programs have either not been fully implemented or have met with only limited success. The comprehensive emergency management program still has a long way to go. Perhaps it will take another 25 years for it to evolve to the point of meeting the original Presidential Mandate.
